List of Figures	ix
List of Tables	xv
Preface	xvii
Introduction	xix
Part 1. Discrete-Continuum Coupling Method to Model Highly Dynamic Multi-Scale Problems	1
Chapter 1. State of the Art: Concurrent Discrete-continuum Coupling	3
1.1. Introduction	3
1.2. Coupling challenges	4
1.2.1. Dissimilar variables due to different mechanical bases	4
1.2.2. Wave reflections due to different analysis scales	4
1.3. Coupling techniques	10
1.3.1. Edge-to-edge coupling methods	11
1.3.2. Bridging domain coupling methods	15
1.3.3. Bridging-scale coupling methods	19
1.3.4. Other coupling techniques	23
1.4. Conclusion	25

Chapter 2. Choice of the Continuum Method to be Coupled with the Discrete Element Method	27
2.1. Introduction	27
2.2. Classification of the continuum methods	28
2.2.1. Grid-based methods	28
2.2.2. Meshless methods	33
2.3. Choice of continuum method	38
2.4. The constrained natural element method	41
2.4.1. Natural neighbor interpolation	41
2.4.2. Visibility criterion	48
2.4.3. Constrained natural neighbor interpolation	48
2.4.4. Numerical integration	49
2.5. Conclusion	51
Chapter 3. Development of Discrete-Continuum Coupling Method Between DEM and CNEM	53
3.1. Introduction	53
3.2. Discrete-continuum coupling method: DEM-CNEM	54
3.2.1. DEM-CNEM coupling formulation	54
3.2.2. Discretization and spatial integration	59
3.2.3. Time integration	62
3.2.4. Algorithmic	63
3.2.5. Implementation	66
3.3. Parametric study of the coupling parameters	67
3.3.1. Influence of the junction parameter l	71
3.3.2. Influence of the weight function α	73
3.3.3. Influence of the approximated mediator space $\tilde{\mathcal{M}}$	79
3.3.4. Influence of the width of the bridging zone L_B	79
3.3.5. Dependence between L_B and $\tilde{\mathcal{M}}$	81
3.4. Choice of the coupling parameters in practice	83
3.5. Validation	84
3.6. Conclusion	85
Part 2. Application: Simulation of Laser Shock Processing of Silica Glass	89
Chapter 4. Some Fundamental Concepts in Laser Shock Processing	91
4.1. Introduction	91
4.2. Theory of laser–matter interaction: high pressure generation	92

4.2.1. Generation of shock wave by laser ablation	93
4.2.2. Shock wave propagation in materials	96
4.2.3. Laser-induced damage in materials	106
4.3. Mechanical response of silica glass under high pressure	109
4.3.1. Silica glass response under quasi-static hydrostatic compression	109
4.3.2. Silica glass response under shock compression	114
4.3.3. Summary of the silica glass response under high pressure	118
4.4. Conclusion	119
Chapter 5. Modeling of the Silica Glass Mechanical Behavior	121
5.1. Introduction	121
5.2. Mechanical behavior modeling	122
5.2.1. Modeling assumption	123
5.2.2. Cohesive beam model	124
5.2.3. Quasi-static calibration and validation	127
5.2.4. Dynamic calibration and validation	139
5.3. Brittle fracture modeling	147
5.4. Conclusion	149
Chapter 6. Simulation of Laser Shock Processing of Silica Glass	151
6.1. Introduction	151
6.2. LSP test	153
6.3. LSP model	155
6.4. Results	159
6.5. Conclusion	163
Conclusion	165
Bibliography	171
Index	185
