# Table of Contents

## Introduction

- 1.1. Introduction ..................................... 1
- 1.2. GIS and public security. .......................... 3
- 1.3. Examples of applications for public security .......... 8
  - 1.3.1. SIGASC application .......................... 8
  - 1.3.2. Application .................................. 12
  - 1.3.3. SIG CODIS application ........................ 15
- 1.4. Prospects for development .......................... 18
- 1.5. Conclusion ......................................... 19
- 1.6. Bibliography ....................................... 19

## Chapter 1. From Prevention to Risk Management: Use of GIS

Sophie SAUVAGNARGUES-LESAGE

- 1.1. Introduction ..................................... 1
- 1.2. GIS and public security. .......................... 3
- 1.3. Examples of applications for public security .......... 8
  - 1.3.1. SIGASC application .......................... 8
  - 1.3.2. Application .................................. 12
  - 1.3.3. SIG CODIS application ........................ 15
- 1.4. Prospects for development .......................... 18
- 1.5. Conclusion ......................................... 19
- 1.6. Bibliography ....................................... 19

## Chapter 2. Coupled Use of Spatial Analysis and Fuzzy Arithmetic:
Assessing the Vulnerability of a Watershed to Phytosanitary Products

Bertrand DE BRUYN, Catherine FREISSINET and Michel VAUCLIN

- 2.1. Introduction ..................................... 23
- 2.2. Construction of the index. .......................... 24
- 2.3. Implementation of fuzzy calculations ................ 26
- 2.4. Application to the watershed of Vannetin: vulnerability to atrazine 28
  - 2.4.1. The research site ............................. 28
  - 2.4.2. Parameters of the watershed .................... 28
    - 2.4.2.1. Pluviometry ................................ 28
    - 2.4.2.2. Anthropogenic sub-index ...................... 29
    - 2.4.2.3. Pedology ................................... 29
    - 2.4.2.4. Summary of data common to the entire watershed 29
2.4.3. Cell parameters ........................................... 29
  2.4.3.1. Geographic characteristics of the area ............. 29
  2.4.3.2. Vegetation cover .................................... 30
  2.4.4. Fuzzy parameters ....................................... 30
  2.4.5. Representation of the indicator and of its related inaccuracy .... 31
2.5. Conclusion .................................................. 33
2.6. Bibliography ................................................ 36

Chapter 3. Agricultural Non-Point Source Pollution ................. 39
Philippe BOLO and Christophe BRACHET

3.1. Introduction ................................................ 39
3.2. Mapping non-point source pollution phenomenon .......... 40
  3.2.1. Mapping principles .................................... 40
  3.2.2. Description of the research phenomenon ............... 41
  3.2.3. Mapping steps ........................................ 41
3.3. Territorial database building rules .......................... 42
  3.3.1. Choosing software programs ............................ 43
  3.3.2. Design of the implemented GIS ........................ 44
  3.3.3. Organizing and creating geographic information layers ...... 46
    3.3.3.1. Implementation of a conceptual data model ........ 46
    3.3.3.2. Digitization of paper-based document ............... 46
    3.3.3.3. Digital data import ................................ 47
    3.3.3.4. Controlling the geographic data integrity .......... 47
  3.3.4. Organizing and creating attribute tables ................. 47
    3.3.4.1. Implementing a conceptual data model ............... 47
    3.3.4.2. Creating a data dictionary .......................... 47
    3.3.4.3. Thematic data processing or import .................. 48
    3.3.4.4. Controlling the attribute data integrity ............. 48
3.4. The data sources used ........................................ 48
  3.4.1. Identifying the available information ................. 48
  3.4.2. Soil-related data ...................................... 49
    3.4.2.1. Surface texture of the soils ....................... 50
    3.4.2.2. Soil hydromorphy .................................. 51
    3.4.2.3. Soil textural differentiation ....................... 51
  3.4.3. Topography-related data ................................ 52
    3.4.3.1. The slope ........................................ 53
    3.4.3.2. Slope orientation .................................. 53
  3.4.4. Land use-related data .................................. 54
  3.4.5. Land planning-related data .............................. 56
    3.4.5.1. Hedges ........................................... 56
    3.4.5.2. Ditches ........................................... 56
    3.4.5.3. Agricultural land drainage .......................... 57

Chapter 6. GIS and Modeling in Forest Fire Prevention

Marielle JAPPIOT, Raphaëlle BLANCHI and Franck GUARNIERI

6.1. Understanding forest fire risks
6.1.1. Risk
6.1.2. Description of the phenomenon
6.1.3. Particularities of fire risk
6.1.3.1. Forest fire hazard
6.1.3.2. Human response to the phenomenon
6.1.3.3. Specific issues
6.1.4. A spatio-temporal variation of forest fire risk
6.2. Forest fire management: risk mapping and the use of spatial analysis
6.2.1. Requirements with respect to forest fire risk assessment
6.2.1.1. Chronological evolution in the field of forest fire risk mapping
6.2.1.2. Town planning requirements
6.2.1.3. Forest management requirements
6.2.1.4. Other requirements
6.2.2. Forest fire risk assessment and mapping: the use of geographic information systems
6.2.2.1. Towards a risk analysis approach
### Chapter 6. Spatial Decision Support and Multi-Agent Systems:
**Application to Forest Fire Prevention and Control**

Franck GUARNIERI, Alain JABER and Jean-Luc WYBO

## Table of Contents

10.4.2. An information system at the regional level to analyze dike failure risks in the Mid-Loire region ........................................ 200
10.4.3. An information system at local level for the integrated management of diked areas ..................................................... 203
  10.4.3.1. Functional analysis of the diked system .......................... 203
  10.4.3.2. Conceptual modeling and prototyping ........................... 204
  10.4.3.3. Examples of results .............................................. 209
10.5. Recent progress and perspectives ...................................... 212
10.6. Bibliography .................................................................... 213

Chapter 11. Geomatics and Urban Risk Management: Expected Advances .......................................................... 215
Jean-Pierre ASTÉ

11.1. Towns, risks and geomatics .............................................. 215
  11.1.1. An overview ......................................................... 215
  11.1.2. City: a much sought after security area ....................... 216
  11.1.3. Risk: a poorly understood notion ................................ 217
  11.1.4. Geomatics as a data structuring and management tool ....... 217
11.2. Prevention stakeholders: their responsibilities, their current resources and expectations ................................. 218
  11.2.1. Ordinary state or emergency state ............................... 218
  11.2.2. Government and institutional stakeholders .................... 218
  11.2.3. Municipal stakeholders and the populations they represent ......................................................... 219
  11.2.4. Operational and technical stakeholders ....................... 220
  11.2.5. Insurance agents .................................................... 220
  11.2.6. Scientific stakeholders .............................................. 221
  11.2.7. Compelled to live with an identified risk ....................... 222
11.3. Today’s methods and tools: strengths and weaknesses .......... 223
  11.3.1. Urban reference systems and the expected connection with the digitizing of cadastral maps ........................................... 223
  11.3.2. Managing experience .............................................. 224
  11.3.3. Knowledge and modeling of phenomena ....................... 226
  11.3.4. Monitoring phenomena ............................................ 227
  11.3.5. Reducing vulnerability ............................................. 227
  11.3.6. Risk assessment .................................................... 228
  11.3.7. Macro and microeconomic approach ............................ 229
  11.3.8. The means of exchange of experiences, skills and knowledge .................................................. 230
  11.3.9. Consultation, public information, training and culture ........ 230
11.4. New potentialities using geomatic methods and tools .......... 232
  11.4.1. Geomatics ............................................................ 232
  11.4.2. Acquiring and structuring spatial and temporal data .......... 233
  11.4.2.1. Data for territories .............................................. 233
11.4.2.2. Data of phenomena ........................................ 233
11.4.2.3. Data related to exposed elements ...................... 234
11.4.3. Modeling phenomena and behaviors ...................... 235
  11.4.3.1. Modeling phenomena .................................. 235
  11.4.3.2. Vulnerability assessment ............................. 236
  11.4.3.3. Understanding social and economic behavior ........ 236
11.4.4. Task analysis and support to complete and control them .. 237
11.4.5. Managing experience and knowledge .................... 238
11.4.6. Quantified and hierarchical appreciation of the risks involved 239
11.5. Some ongoing initiatives since the beginning of 2001 ........ 240
  11.5.1. Examples from Lyon: the information system of the service of Balmes and the GERICO project .......................... 240
  11.5.2. An Alpine concern: avalanche risk management ......... 242
  11.5.3. Risk management and natural or man-made subterranean caverns, mines and quarries .................................. 243
  11.5.4. The RADIUS project of the international decade for natural disaster reduction (Décennie internationale pour la prevention des catastrophes naturelles (DIPCN)) .................................. 243
  11.5.5. Bogotá and its risk and crisis information system (SIRE) .................................. 244
  11.5.6. The CEUR project in preparation between the Rhône-Alpine and Mediterranean cities .................................. 244
  11.5.7. The Base-In project of recording Grenoble’s historical floods .................................. 245
11.6. Assessment and outlook: fundamental elements of future systems .................................. 245
  11.6.1. Territory .................................................. 246
  11.6.2. Phenomena .................................................. 246
  11.6.3. Stakeholders .............................................. 247
11.7. Bibliography .................................................. 247

List of Authors .................................................. 249

Index .......................................................... 251
