

## Table of Contents

<b>Introduction</b> . . . . .	xi
<b>PART 1. TOOLS FOR SIGNAL COMPRESSION</b> . . . . .	1
<b>Chapter 1. Scalar Quantization</b> . . . . .	3
1.1. Introduction . . . . .	3
1.2. Optimum scalar quantization . . . . .	4
1.2.1. Necessary conditions for optimization . . . . .	5
1.2.2. Quantization error power . . . . .	7
1.2.3. Further information . . . . .	10
1.2.3.1. Lloyd–Max algorithm . . . . .	10
1.2.3.2. Non-linear transformation . . . . .	10
1.2.3.3. Scale factor . . . . .	10
1.3. Predictive scalar quantization . . . . .	10
1.3.1. Principle . . . . .	10
1.3.2. Reminders on the theory of linear prediction . . . . .	12
1.3.2.1. Introduction: least squares minimization . . . . .	12
1.3.2.2. Theoretical approach . . . . .	13
1.3.2.3. Comparing the two approaches . . . . .	14
1.3.2.4. Whitening filter . . . . .	15
1.3.2.5. Levinson algorithm . . . . .	16
1.3.3. Prediction gain . . . . .	17
1.3.3.1. Definition . . . . .	17
1.3.4. Asymptotic value of the prediction gain . . . . .	17
1.3.5. Closed-loop predictive scalar quantization . . . . .	20
<b>Chapter 2. Vector Quantization</b> . . . . .	23
2.1. Introduction . . . . .	23
2.2. Rationale . . . . .	23

2.3. Optimum codebook generation . . . . .	26
2.4. Optimum quantizer performance . . . . .	28
2.5. Using the quantizer . . . . .	30
2.5.1. Tree-structured vector quantization . . . . .	31
2.5.2. Cartesian product vector quantization . . . . .	31
2.5.3. Gain-shape vector quantization . . . . .	31
2.5.4. Multistage vector quantization . . . . .	31
2.5.5. Vector quantization by transform . . . . .	31
2.5.6. Algebraic vector quantization . . . . .	32
2.6. Gain-shape vector quantization . . . . .	32
2.6.1. Nearest neighbor rule . . . . .	33
2.6.2. Lloyd–Max algorithm . . . . .	34
<b>Chapter 3. Sub-band Transform Coding</b> . . . . .	37
3.1. Introduction . . . . .	37
3.2. Equivalence of filter banks and transforms . . . . .	38
3.3. Bit allocation . . . . .	40
3.3.1. Defining the problem . . . . .	40
3.3.2. Optimum bit allocation . . . . .	41
3.3.3. Practical algorithm . . . . .	43
3.3.4. Further information . . . . .	43
3.4. Optimum transform . . . . .	46
3.5. Performance . . . . .	48
3.5.1. Transform gain . . . . .	48
3.5.2. Simulation results . . . . .	51
<b>Chapter 4. Entropy Coding</b> . . . . .	53
4.1. Introduction . . . . .	53
4.2. Noiseless coding of discrete, memoryless sources . . . . .	54
4.2.1. Entropy of a source . . . . .	54
4.2.2. Coding a source . . . . .	56
4.2.2.1. Definitions . . . . .	56
4.2.2.2. Uniquely decodable instantaneous code . . . . .	57
4.2.2.3. Kraft inequality . . . . .	58
4.2.2.4. Optimal code . . . . .	58
4.2.3. Theorem of noiseless coding of a memoryless discrete source . . . . .	60
4.2.3.1. Proposition 1 . . . . .	60
4.2.3.2. Proposition 2 . . . . .	61
4.2.3.3. Proposition 3 . . . . .	61
4.2.3.4. Theorem . . . . .	62
4.2.4. Constructing a code . . . . .	62
4.2.4.1. Shannon code . . . . .	62

4.2.4.2. Huffman algorithm . . . . .	63
4.2.4.3. Example 1 . . . . .	63
4.2.5. Generalization . . . . .	64
4.2.5.1. Theorem . . . . .	64
4.2.5.2. Example 2 . . . . .	65
4.2.6. Arithmetic coding . . . . .	65
4.3. Noiseless coding of a discrete source with memory . . . . .	66
4.3.1. New definitions . . . . .	67
4.3.2. Theorem of noiseless coding of a discrete source with memory . . . . .	68
4.3.3. Example of a Markov source . . . . .	69
4.3.3.1. General details . . . . .	69
4.3.3.2. Example of transmitting documents by fax . . . . .	70
4.4. Scalar quantizer with entropy constraint . . . . .	73
4.4.1. Introduction . . . . .	73
4.4.2. Lloyd–Max quantizer . . . . .	74
4.4.3. Quantizer with entropy constraint . . . . .	75
4.4.3.1. Expression for the entropy . . . . .	76
4.4.3.2. Jensen inequality . . . . .	77
4.4.3.3. Optimum quantizer . . . . .	78
4.4.3.4. Gaussian source . . . . .	78
4.5. Capacity of a discrete memoryless channel . . . . .	79
4.5.1. Introduction . . . . .	79
4.5.2. Mutual information . . . . .	80
4.5.3. Noisy-channel coding theorem . . . . .	82
4.5.4. Example: symmetrical binary channel . . . . .	82
4.6. Coding a discrete source with a fidelity criterion . . . . .	83
4.6.1. Problem . . . . .	83
4.6.2. Rate–distortion function . . . . .	84
4.6.3. Theorems . . . . .	85
4.6.3.1. Source coding theorem . . . . .	85
4.6.3.2. Combined source-channel coding . . . . .	85
4.6.4. Special case: quadratic distortion measure . . . . .	85
4.6.4.1. Shannon’s lower bound for a memoryless source . . . . .	85
4.6.4.2. Source with memory . . . . .	86
4.6.5. Generalization . . . . .	87
<b>PART 2. AUDIO SIGNAL APPLICATIONS . . . . .</b>	<b>89</b>
<b>Chapter 5. Introduction to Audio Signals . . . . .</b>	<b>91</b>
5.1. Speech signal characteristics . . . . .	91
5.2. Characteristics of music signals . . . . .	92
5.3. Standards and recommendations . . . . .	93

5.3.1. Telephone-band speech signals . . . . .	93
5.3.1.1. Public telephone network . . . . .	93
5.3.1.2. Mobile communication . . . . .	94
5.3.1.3. Other applications . . . . .	95
5.3.2. Wideband speech signals . . . . .	95
5.3.3. High-fidelity audio signals . . . . .	95
5.3.3.1. MPEG-1 . . . . .	96
5.3.3.2. MPEG-2 . . . . .	96
5.3.3.3. MPEG-4 . . . . .	96
5.3.3.4. MPEG-7 and MPEG-21 . . . . .	99
5.3.4. Evaluating the quality . . . . .	99
<b>Chapter 6. Speech Coding . . . . .</b>	101
6.1. PCM and ADPCM coders . . . . .	101
6.2. The 2.4 bit/s LPC-10 coder . . . . .	102
6.2.1. Determining the filter coefficients . . . . .	102
6.2.2. Unvoiced sounds . . . . .	103
6.2.3. Voiced sounds . . . . .	104
6.2.4. Determining voiced and unvoiced sounds . . . . .	106
6.2.5. Bit rate constraint . . . . .	107
6.3. The CELP coder . . . . .	107
6.3.1. Introduction . . . . .	107
6.3.2. Determining the synthesis filter coefficients . . . . .	109
6.3.3. Modeling the excitation . . . . .	111
6.3.3.1. Introducing a perceptual factor . . . . .	111
6.3.3.2. Selecting the excitation model . . . . .	113
6.3.3.3. Filtered codebook . . . . .	113
6.3.3.4. Least squares minimization . . . . .	115
6.3.3.5. Standard iterative algorithm . . . . .	116
6.3.3.6. Choosing the excitation codebook . . . . .	117
6.3.3.7. Introducing an adaptive codebook . . . . .	118
6.3.4. Conclusion . . . . .	121
<b>Chapter 7. Audio Coding . . . . .</b>	123
7.1. Principles of “perceptual coders” . . . . .	123
7.2. MPEG-1 layer 1 coder . . . . .	126
7.2.1. Time/frequency transform . . . . .	127
7.2.2. Psychoacoustic modeling and bit allocation . . . . .	128
7.2.3. Quantization . . . . .	128
7.3. MPEG-2 AAC coder . . . . .	130
7.4. Dolby AC-3 coder . . . . .	134
7.5. Psychoacoustic model: calculating a masking threshold . . . . .	135
7.5.1. Introduction . . . . .	135

7.5.2. The ear . . . . .	135
7.5.3. Critical bands . . . . .	136
7.5.4. Masking curves . . . . .	137
7.5.5. Masking threshold . . . . .	139
<b>Chapter 8. Audio Coding: Additional Information . . . . .</b>	<b>141</b>
8.1. Low bit rate/acceptable quality coders . . . . .	141
8.1.1. Tool one: SBR . . . . .	142
8.1.2. Tool two: PS . . . . .	143
8.1.2.1. Historical overview . . . . .	143
8.1.2.2. Principle of PS audio coding . . . . .	143
8.1.2.3. Results . . . . .	144
8.1.3. Sound space perception . . . . .	145
8.2. High bit rate lossless or almost lossless coders . . . . .	146
8.2.1. Introduction . . . . .	146
8.2.2. ISO/IEC MPEG-4 standardization . . . . .	147
8.2.2.1. Principle . . . . .	147
8.2.2.2. Some details . . . . .	147
<b>Chapter 9. Stereo Coding: A Synthetic Presentation . . . . .</b>	<b>149</b>
9.1. Basic hypothesis and notation . . . . .	149
9.2. Determining the inter-channel indices . . . . .	151
9.2.1. Estimating the power and the intercovariance . . . . .	151
9.2.2. Calculating the inter-channel indices . . . . .	152
9.2.3. Conclusion . . . . .	154
9.3. Downmixing procedure . . . . .	154
9.3.1. Development in the time domain . . . . .	155
9.3.2. In the frequency domain . . . . .	157
9.4. At the receiver . . . . .	158
9.4.1. Stereo signal reconstruction . . . . .	158
9.4.2. Power adjustment . . . . .	159
9.4.3. Phase alignment . . . . .	160
9.4.4. Information transmitted via the channel . . . . .	161
9.5. Draft International Standard . . . . .	161
<b>PART 3. MATLAB® PROGRAMS . . . . .</b>	<b>163</b>
<b>Chapter 10. A Speech Coder . . . . .</b>	<b>165</b>
10.1. Introduction . . . . .	165
10.2. Script for the calling function . . . . .	165
10.3. Script for called functions . . . . .	170

<b>Chapter 11. A Music Coder</b> . . . . .	173
11.1. Introduction . . . . .	173
11.2. Script for the calling function . . . . .	173
11.3. Script for called functions . . . . .	176
<b>Bibliography</b> . . . . .	195
<b>Index</b> . . . . .	199
