Introduction	ix
Table of Notations	xv
Chapter 1. Location of Solid Bodies	1
1.1. The notion of system of reference	1
1.2. Frame of reference	2
1.2.1. Setting up a frame of reference	2
1.2.2. Various types of frames of reference	9
1.3. Location of a solid body	14
1.3.1. The principle of locating a solid	15
1.3.2. Location parameters of a solid	15
1.3.3. Coordinates of the position vector	16
1.3.4. Exercises	20
1.4. Positioning of a system of reference connected to a solid	22
1.4.1. Several examples of location systems of reference	22
1.4.2. General location parameters	26
1.4.3. Euler angles	28
1.4.4. Changes of basis in the Euler representation	29
1.4.5. Exercises	36
1.5. Vector rotation $\mathcal{R}_{\vec{u},\alpha}$	44
1.5.1. Exercises	47
1.6. Other exercises	51
1.6.1. Exercise 7 – Location of an airplane – Euler angles	51
1.6.2. Exercise 8 – Vector rotation	55
1.6.3. Exercise 9 – Vector rotation	57
1.6.4. Exercise 10 – Vector rotation	59

Chapter 2. Solid Kinematics	63
2.1. Generalities on moving solids	63
2.1.1. Concept of a rigid material system.	63
2.1.2. Notion of time	64
2.1.3. Kinematic components of a solid.	65
2.2. Kinematics of a material point.	66
2.2.1. Position vector.	66
2.2.2. Trajectory of a material point in a reference frame	66
2.2.3. Velocity of a material point in a reference frame	67
2.2.4. Components of the velocity vector or velocity.	68
2.2.5. Derivative of a vector in a basis	71
2.2.6. Acceleration vector of a material point in a reference frame	74
2.2.7. Exercises	79
2.3. Velocity field associated with the motion of the rigid solid	85
2.3.1. Fundamental formula for the velocity	85
2.3.2. Use of matrix notation	87
2.3.3. Velocity-distributing torsor	89
2.3.4. Partial distributing	89
2.4. Acceleration field of the rigid solid.	91
2.4.1. Derivative in relation to the time of the rate of rotation	91
2.4.2. Derivation of a vector of the solid	92
2.4.3. Fundamental formula of acceleration	92
2.4.4. Matrix notation of the vectorial product.	92
2.4.5. Exercises	93
2.5. Motion with fixed plane	102
2.5.1. Position of the problem	102
2.5.2. Instantaneous rotation center	104
2.5.3. Fixed and mobile centroids of the motion	106
2.5.4. The instantaneous center of rotation on the fixed centroid and on the movable centroid	107
2.5.5. Physical interpretation of the notions of fixed centroid and mobile centroid	108
2.5.6. Exercises	109

2.6. Combining motions within a mobile frame of reference	117
2.6.1. Position of the problem	117
2.6.2. Trajectory of a material point in the different frames . . .	118
2.6.3. Combination of velocities	118
2.6.4. Combination of accelerations	123
2.6.5. Application exercises	128
2.7. Relative motion of two rigid solids in contact	141
2.7.1. Position of the problem	141
2.7.2. Velocity-distributing torsors	141
2.7.3. Characterization of motions	142
2.7.4. Nature of the contact between (S_1) and (S_2)	143
2.7.5. Exercises	145
2.8. Other exercises	156
2.8.1. Exercise 21 – Motion with fixed plane	156
2.8.2. Exercise 22 – Combination of motions	160
2.8.3. Exercise 23 – Kinematics of contact in a system	169
Chapter 3. Kinetics of Solid Bodies	177
3.1. The mass of a continuous mechanical set (\mathcal{D})	177
3.1.1. The notion of measure on a continuous mechanical set	178
3.1.2. The volume and the mass of a continuous mechanical set	178
3.2. Center of the measure of μ on (\mathcal{D})	179
3.2.1. Definition	179
3.2.2. Uniqueness of the center of measure	179
3.2.3. Center of measure of two disjoint sets	180
3.2.4. Coordinates of the center of measure in a system of reference $\langle \lambda \rangle$	181
3.3. Interpretation of the notion of center of measure	183
3.4. Kinetic torsor of a mechanical set (\mathcal{D})	183
3.4.1. Definition – linear momentum	183
3.4.2. Kinetic torsor $\{p_S^2\}$ of a rigid solid body	185
3.4.3. Inertia operator $I_{O_S}(S m)$	186
3.4.4. Kinetic torsor and change of basis	196
3.5. Dynamic torsor of a mechanical set (\mathcal{D})	198
3.5.1. Definition	198
3.5.2. Dynamic torsor of the rigid solid body (S)	199
3.6. Kinetic energy of a mechanical set (\mathcal{D})	206
3.6.1. Definition	207

3.6.2. Kinetic energy of the free rigid solid body (S)	207
3.6.3. Derivatives of the kinetic energy - Lagrangian.	213
3.6.4. Exercises	223
3.6.5. Kinetic energy of a constrained solid	238
3.7. Partition of a continuous mechanical set (\mathcal{D}).	239
Bibliography	241
