ACKNOWLEDGMENTS	xi
INTRODUCTION	xiii
CHAPTER 1. SPECIFIC REQUIREMENTS FOR THE 3D DIGITIZATION OF OUTSTANDING SITES	1
1.1. The current offer for high-resolution 3D data . . .	1
1.2. Statement of requirements	4
1.2.1. Potentials	4
1.2.2. Conversion into building specifications	6
1.2.3. Technical survey specifications	7
1.3. Existing surveying methods	8
1.3.1. Existing acquisition methods	8
1.3.2. Example surveys	9
1.3.3. Survey control data	12
1.4. From building specifications to realization	12
1.4.1. Reconnaissance stage	12
1.4.2. Acquisition	15
1.4.3. Processing of data	16
1.5. Bibliography	18
CHAPTER 2. 3D DIGITIZATION USING IMAGES.	21
2.1. History in France	21
2.2. Equipment	23

2.2.1. Equipment through the years	23
2.2.2. Modernization of equipment	25
2.2.3. Cameras	26
2.2.4. How do you measure with a camera?	28
2.3. Image acquisition	33
2.3.1. Characteristics of the images	33
2.3.2. Traditional stereoscopic image survey	36
2.3.3. Stereoscopic image surveying for the automatic production of 3D point clouds.	38
2.3.4. Surveying devices	43
2.3.5. Survey control data	48
2.4. Image orientation	48
2.4.1. Principles	48
2.4.2. Automation	52
2.4.3. Strategies for the orientation of all the images of a site.	55
2.4.4. Qualifying the orientation of images	57
2.5. Production of 3D point clouds from images	57
2.5.1. Definition and use of 3D point clouds	57
2.5.2. Principle for the production of 3D point clouds by dense image matching.	58
2.5.3. Optimization	63
2.5.4. Qualification of data produced.	66
2.5.5. Advantages and limits	68
2.5.6. Other approaches to automatic image-based 3D reconstruction	68
2.6. 3D drawing by stereo or multi-image plotting	69
2.6.1. Definition and use of 3D drawing.	69
2.6.2. Principle of the production of a 3D drawing	70
2.6.3. Qualification of 3D drawing	72
2.7. The software offer in close-range photogrammetry	74
2.8. Research prospects	74
2.8.1. Production in near-real time	74
2.8.2. Data crowdsourcing	75
2.8.3. Automatic reconstruction of 3D vector models using images	75
2.9. Bibliography.	76

CHAPTER 3. 3D DIGITIZATION BY LASER SCANNER . . .	85
3.1. History	85
3.2. Equipment	87
3.2.1. How a terrestrial laser scanner works	87
3.2.2. Various families of laser technology	88
3.2.3. Characteristics of terrestrial laser scanners	91
3.2.4. Errors affecting measurement and calibration	95
3.2.5. The main manufacturers	99
3.2.6. Instances of use	99
3.3. Acquisition by lasergrammetry	100
3.3.1. Survey design	101
3.3.2. Requirements for control points	102
3.3.3. Practical realization	106
3.3.4. Advantages and limits of this technology . . .	107
3.3.5. Linking of external photographs	108
3.4. Registration of laser stations	110
3.4.1. Principle of the different registration strategies	110
3.4.2. Automation of all or part of the registration phase	113
3.4.3. Qualification of the registration of laser stations	115
3.4.4. Exporting registered laser point clouds	117
3.5. Qualification of the point clouds obtained	118
3.5.1. Geometric quality	118
3.5.2. Radiometric quality	119
3.5.3. Other elements of quality	120
3.6. Bibliography	120
CHAPTER 4. COMPLEMENTARITY OF TECHNIQUES . . .	125
4.1. Introduction	125
4.2. Comparison of techniques	125
4.2.1. Data acquisition in the field	125
4.2.2. Quality of data	126
4.2.3. Data processing	127
4.3. Example of the survey of Amiens Cathedral	127

4.3.1. Proposed surveying methodology: lasergrammetry for the framework, complemented by photogrammetry	128
4.3.2. Georeferencing of data	129
4.3.3. Completeness of the survey.	130
4.4. Bibliography.	130
CHAPTER 5. POINT CLOUD PROCESSING	133
5.1. Visualization and organization of 3D point clouds	134
5.1.1. Ways of visualizing point clouds	134
5.1.2. Organization of point clouds	140
5.2. Preprocessing of the point clouds	143
5.2.1. Denoising and filtering	143
5.2.2. Merging of data	145
5.2.3. Subsampling, resampling and compression of point clouds	147
5.2.4. Segmentation	149
5.3. From the point cloud to the 3D geometric model	153
5.3.1. Types of 3D models	153
5.3.2. Modeling in a 3D point cloud.	154
5.3.3. Surface meshing	158
5.3.4. Automatic reconstruction	161
5.3.5. Combining laser point cloud with images	163
5.3.6. Texturing	164
5.3.7. Qualification of geometric models	166
5.4. By-products	166
5.4.1. Line drawings	166
5.4.2. Production of orthoimages	169
5.4.3. Other image products	172
5.5. Bibliography.	173
CHAPTER 6. MANAGEMENT AND USE OF SURVEYS . . .	183
6.1. Introduction	183
6.2. Managing data conservation	184
6.2.1. Backup methods	184
6.2.2. Semantic enhancement of geometric data. . .	185
6.2.3. Standardization.	186

6.2.4. Responsibility and support for data conservation	189
6.3. Diffusion of data	189
6.3.1. Expected functionalities	189
6.3.2. GIS	190
6.3.3. Web platforms	191
6.4. Bibliography	193
CONCLUSION	195
