|--|----|
| Preface | ix |
| Introduction | xi |
| Chapter 1. Laser Integration Challenges | 1 |
| 1.1. Evolution of microprocessor technologies | 1 |
| 1.1.1. Microprocessor architecture and design | 2 |
| 1.1.2. Delay versus power trade-off | 5 |
| 1.2. Photonic integration schemes | 7 |
| 1.2.1. The photonic layer in 2D MP architectures | 8 |
| 1.2.2. Toward wafer-scale 3D MP architectures | 10 |
| 1.3. Semiconductor lasers | 11 |
| 1.3.1. Operating principle | 11 |
| 1.3.2. Optical cavity | 16 |
| 1.3.3. Carriers injection | 18 |
| 1.3.4. Active area | 20 |
| 1.3.5. Non-radiative recombination and absorption processes | 22 |
| 1.3.6. Influence of the temperature | 25 |
| 1.3.7. Ideal performances of the integrated laser | 27 |
| Chapter 2. Group IV Silicon Lasers | 31 |
| 2.1. Group IV silicon lasers: issues | 31 |
| 2.2. Emission from bulk silicon | 32 |
| 2.3. Using quantum confinement | 34 |
| 2.4. Raman scattering for lasing | 35 |

| | |
|--|-----------|
| 2.5. Rare-earth doping | 37 |
| 2.6. Group IV SiGeSn alloys for lasing | 39 |
| 2.6.1. SiGe quantum cascade lasers | 40 |
| 2.6.2. SiGe lasers | 41 |
| 2.6.3. SiGeSn lasers | 44 |
| Chapter 3. III–V Lasers Bonded on Si | 47 |
| 3.1. Introduction | 47 |
| 3.2. Historical flip-chip bonding technology: advantages and drawbacks. | 48 |
| 3.3. Die versus wafer bonding | 49 |
| 3.4. Basic principles of wafer bonding. | 52 |
| 3.4.1. Molecular bonding | 52 |
| 3.4.2. Polymer-assisted bonding | 56 |
| 3.4.3. Metal-assisted bonding. | 58 |
| 3.5. Basic principles of transfer printing. | 59 |
| 3.5.1. Substrate removal versus epitaxial lift-off | 59 |
| 3.5.2. Massive transfer printing | 62 |
| 3.6. Device structures and performances of III–V lasers coupled to SOI waveguides | 64 |
| 3.6.1. Hybrid III–V/Si lasers by molecular bonding | 65 |
| 3.6.2. Hybrid III–V/Si lasers by polymer-assisted bonding | 68 |
| 3.6.3. Heterogeneous III–V/Si lasers | 69 |
| 3.7. Conclusion | 71 |
| Chapter 4. Monolithic III–V Lasers on Silicon | 73 |
| 4.1. The monolithic integration: issues and strategies. | 73 |
| 4.1.1. Heteroepitaxy: the material issues | 73 |
| 4.1.2. The different strategies. | 82 |
| 4.2. Monolithic devices | 88 |
| 4.2.1. GaAs/Si-based laser devices | 88 |
| 4.2.2. InP/Si-based laser devices | 92 |
| 4.2.3. GaSb/Si-based laser devices | 96 |
| 4.2.4. GaN/Si-based laser devices | 99 |
| 4.2.5. GaP/Si-based laser devices | 103 |
