Introduction	xi
Part 1. Health Inequalities	1
Chapter 1. The Origin of Inequality	3
1.1. A tale of two phases: an initial explosion followed by geographical redistribution	5
1.2. An initial explosion: was Rousseau right?	7
1.2.1. Archaeological data	8
1.3. Inequality became geographical: is Diamond right?	12
1.3.1. Absolute advantages and disadvantages	13
1.3.2. Force as the foundation of inequality	14
1.3.3. The consequences of global inequality	15
1.4. On medical ethics	17
Chapter 2. Psychological and Social Factors of Health Inequalities	19
2.1. Approaches to studying inequality in health	23
2.1.1. Socioeconomic approach	23
2.1.2. Geographic disparities and social inequalities in health	25
2.1.3. Psychosocial and behavioral approach	28

2.2. Risky behavior and health inequalities	30
2.2.1. Optimism, risk and health inequalities	31
2.2.2. Risk perception and health inequalities	32
2.2.3. The psychosocial approach and risky behaviors	33
2.3. Optimism and risk perception	35
2.3.1. Optimism in the motivational approach	36
2.3.2. Optimism according to the cognitive approach	37
2.4. The study: methodology and data collection	39
2.4.1. Information on those surveyed vis-à-vis the risk	40
2.4.2. Risk perception	42
2.4.3. Preventative measures vis-à-vis risk	44
2.4.4. Ozone pollution among the well-off in the urban areas of Lille	47
2.5. Comparison with Morocco, the global “median” health system	49
2.5.1. Risk of pesticide poisoning in Morocco	51
2.5.2. Carbon monoxide poisoning in Morocco	53
2.5.3. Pathologies with environment and food-related origins: rhino-pharyngeal cancer	54
2.5.4. Legionnaires’ epidemic in Morocco	57
2.5.5. Sanitation, drinking water supply and waste in Morocco	59
2.5.6. Atmospheric pollution and health in Morocco	60
Chapter 3. How Inequalities Come Together	65
3.1. The interplay of the different inequalities (health, education, wealth)	65
3.2. A comparative approach	68
3.3. The interplay of inequalities: from Rawls to Sen	72
Part 2. Sustainable and Equitable Architecture for Health Systems	77
Chapter 4. Transformations in Health Systems	79
4.1. Sustainability of health systems	79
4.1.1. Sustainability and life cycle	82

4.1.2. Cures	83
4.1.3. Long-term care	84
4.1.4. Ambulances	85
4.2. New professions – new ethics?	87
4.2.1. Case managers	88
4.2.2. The general practitioner’s concern for others	89
4.2.3. “Minimal” professional ethics	90
4.2.4. Three conditions for a minimal system of ethics	93
4.3. Decentralization and equity	95
Chapter 5. Integrating Innovation	99
5.1. Defining innovation	100
5.1.1. The types of innovation	100
5.2. Using the exploration/exploitation model	101
5.3. Using endogenous growth models	106
5.4. Innovation and Corporate Social Responsibility	108
5.5. Connected health and integrated care	110
Chapter 6. Healthcare Networks	113
6.1. Defining healthcare networks: their history and development	114
6.2. Care networks and citizenship	117
6.3. Healthcare networks and health economics	119
6.3.1. The agency theory as applied to healthcare networks	120
6.3.2. The convention theory as applied to healthcare networks	122
6.3.3. The evolutionary and socio-economic approach to care networks	123
6.3.4. From the specific to the universal: medical deserts and multiple pathologies	126
Conclusion	129
