<b>PREFACE</b> . . . . .	ix
<b>LIST OF SYMBOLS</b> . . . . .	xv
<b>INTRODUCTION</b> . . . . .	xxi
<b>CHAPTER 1. FRAMEWORK OF DISCRETE MECHANICS</b> . .	1
1.1. Frames of reference and uniform motions . . . . .	1
1.2. Concept of a Discrete Medium . . . . .	4
1.2.1. Vectors and components . . . . .	6
1.2.2. Physical meaning of the differential operators . . . .	8
1.2.3. Use of the theorems of differential geometry . . . . .	10
1.2.4. Two essential properties . . . . .	12
1.2.5. Tensorial values . . . . .	17
1.2.6. The scalar and vectorial potentials . . . . .	19
1.3. The physical characteristics . . . . .	20
1.4. Equilibrium stress state . . . . .	22
1.4.1. Two examples of mechanical equilibrium . . . . .	25
1.5. Thermodynamic non-equilibrium . . . . .	26
1.5.1. Forces and fluxes . . . . .	29
1.6. Conservation of mass . . . . .	30
<b>CHAPTER 2. MOMENTUM CONSERVATION</b> . . . . .	33
2.1. Classification of forces . . . . .	33

---

2.2. Three fundamental experiments . . . . .	35
2.2.1. Equilibrium in a glass of water . . . . .	35
2.2.2. Couette flow . . . . .	44
2.2.3. Poiseuille flow . . . . .	47
2.3. Postulates . . . . .	51
2.4. Modeling of the pressure forces . . . . .	52
2.5. Modeling of the viscous forces . . . . .	57
2.5.1. Modeling of the viscous effects of volume . . . . .	57
2.5.2. Modeling of the viscous surface effects . . . . .	59
2.5.3. Stress state . . . . .	62
2.6. Objectivity . . . . .	64
2.7. Discrete motion balance equation . . . . .	67
2.7.1. Fundamental law of dynamics . . . . .	67
2.7.2. Eulerian step . . . . .	73
2.7.3. Mechanical equilibrium . . . . .	74
2.8. Formulation in terms of density and temperature . . . . .	78
2.9. Similitude parameters . . . . .	81
2.9.1. Impact on the surface of a liquid . . . . .	85
2.10. Hypercompressible media . . . . .	88
<b>CHAPTER 3. CONSERVATION OF HEAT FLUX AND ENERGY . . . . .</b>	<b>91</b>
3.1. Introduction . . . . .	91
3.2. Conservation of flux . . . . .	92
3.3. Conservation of energy . . . . .	95
3.3.1. Conservation of total energy . . . . .	95
3.3.2. Conservation of kinetic energy . . . . .	97
3.3.3. Conservation of the internal energy . . . . .	98
3.4. Discrete equations for the flux and the energy . . . . .	99
3.5. A simple heat-conduction problem . . . . .	100
3.5.1. Case of anisotropic materials . . . . .	102
<b>CHAPTER 4. PROPERTIES OF DISCRETE EQUATIONS . . . . .</b>	<b>105</b>
4.1. A system of equations and potentials . . . . .	105
4.2. Physics represented . . . . .	107
4.2.1. Poiseuille flow and potentials . . . . .	110
4.2.2. Celerity and maximum velocity . . . . .	112

4.2.3. Remarks about turbulence . . . . .	113
4.3. Boundary conditions . . . . .	114
4.3.1. Contact surface . . . . .	114
4.3.2. Shockwaves . . . . .	117
4.3.3. Edge conditions . . . . .	118
4.3.4. Slip condition . . . . .	119
4.3.5. Capillary effects . . . . .	120
4.3.6. Thermal boundary conditions . . . . .	124
4.4. Penalization of the potentials . . . . .	125
4.5. Continua and discrete mediums . . . . .	129
4.5.1. Differences with the Navier–Stokes equation . . . . .	129
4.5.2. Dissipation . . . . .	133
4.5.3. Case of rigidifying motions . . . . .	135
4.5.4. An example of the dissipation of energy . . . . .	137
4.6. Hodge–Helmholtz decomposition . . . . .	139
4.7. Approximations . . . . .	141
4.7.1. Bernoulli’s law . . . . .	141
4.7.2. Irrotational flow . . . . .	143
4.7.3. Inviscid fluid . . . . .	144
4.7.4. Incompressible flow . . . . .	145
4.8. Gravitational waves . . . . .	147
4.9. Linear visco-elasticity . . . . .	150
4.9.1. Viscous dissipation in a visco-elastic medium . . . . .	153
4.9.2. Dissipation of longitudinal waves in a visco-elastic medium . . . . .	155
4.9.3. Consistency with Continuum Mechanics . . . . .	156
4.9.4. Pure compression . . . . .	159
4.9.5. Pure shear stress . . . . .	160
4.9.6. Bingham fluid . . . . .	162
<b>CHAPTER 5. MULTIPHYSICS . . . . .</b>	<b>165</b>
5.1. Extensions to other branches of physics . . . . .	165
5.1.1. Coupling between a fluid and a porous medium . . . . .	167
5.2. Flow around a cylinder in an infinite medium . . . . .	169
5.2.1. Darcian model . . . . .	170
5.2.2. Stokes model . . . . .	174
5.2.3. Model of an ideal fluid . . . . .	175

5.2.4. Brinkman model . . . . .	176
5.3. Fluid statics . . . . .	178
5.3.1. Perfect gas in isothermal evolution . . . . .	179
5.3.2. Perfect gas in adiabatic evolution . . . . .	181
5.4. Injection of a gas into a cavity . . . . .	183
5.4.1. Isothermal injection . . . . .	184
5.4.2. Adiabatic injection . . . . .	185
5.5. Nonlinear wave propagation . . . . .	188
5.5.1. Sod shock tube . . . . .	190
5.6. Thermo-acoustics . . . . .	192
5.6.1. Heating of a cavity filled with air . . . . .	193
5.7. Natural convection in an enclosed cavity . . . . .	198
5.8. Multi-component transport . . . . .	200
5.9. Modeling of phase change . . . . .	203
5.10. Critical opalescence . . . . .	207
5.11. Conclusions regarding the multiphysics approach . . . . .	209
<b>APPENDIX</b> . . . . .	<b>211</b>
<b>BIBLIOGRAPHY</b> . . . . .	<b>215</b>
<b>INDEX</b> . . . . .	<b>219</b>
