<b>Introduction</b> . . . . .	ix
<b>List of Algorithms</b> . . . . .	xi
<b>Chapter 1. Systems and their Design</b> . . . . .	1
1.1. Modeling systems . . . . .	1
1.1.1. Conventional systems . . . . .	2
1.1.2. Complex systems . . . . .	3
1.1.3. System of systems . . . . .	3
1.2. Autonomous systems . . . . .	5
1.3. Agents and multi-agent systems. . . . .	6
1.3.1. The weak notion of agent . . . . .	7
1.3.2. The strong notion of agent . . . . .	7
1.3.3. Cognitive agents and reactive agents . . . . .	8
1.3.4. Multi-agent systems . . . . .	9
1.3.5. Reactive agent-based MAS . . . . .	10
1.3.6. Cognitive agent-based MAS . . . . .	11
1.4. Systems and organisms . . . . .	13
1.5. The issue of modeling an autonomous system . . . . .	13
<b>Chapter 2. The Global Architecture of an Autonomous System</b> . . . . .	17
2.1. Introduction. . . . .	17
2.2. Reactivity of a system. . . . .	17
2.3. The basic structure of an autonomous system: the substratum . . . . .	18
2.3.1. A detailed example: smoothing the flow or urban traffic . . . . .	20

2.4. The membrane of autonomous systems . . . . .	22
2.4.1. Membrane and information . . . . .	25
2.5. Two types of proactivity and the notion of artificial organ . . . . .	26
2.5.1. Weak proactivity . . . . .	26
2.5.2. Strong proactivity . . . . .	27
2.5.3. Measuring proactivity with dynamic graphs . . . . .	30
2.6. Autonomy and current representation . . . . .	31
2.6.1. Current representation in an autonomous system . . . . .	32
2.7. The unifying system that generates representations . . . . .	33
<b>Chapter 3. Designing a Multi-agent Autonomous System . . . . .</b>	<b>41</b>
3.1. Introduction . . . . .	41
3.2. The object layer on the substratum . . . . .	41
3.3. The agent representation of the substratum: interface agents, organs and the notion of sensitivity . . . . .	44
3.3.1. Artificial organs . . . . .	46
3.3.2. Sensitivity of the corporeity . . . . .	47
3.4. The interpretation system and the conception agents . . . . .	47
3.4.1. The properties of a conception agent in the interpretation system . . . . .	49
3.4.2. An example . . . . .	52
3.4.3. Creating a conception agent . . . . .	57
3.5. Aggregates of conception agents . . . . .	58
3.6. The intent and the activity of conception agents . . . . .	60
3.7. Agentifying conception agents . . . . .	63
3.8. Activity of a conception agent . . . . .	65
3.9. The three layers of conceptual agentification and the role of control . . . . .	70
3.9.1. First guiding principle for the architecture of an autonomous system . . . . .	74
3.10. Semantic lattices and the emergence of representations in the interpretation system . . . . .	77
3.11. The general architecture of the interpretation system . . . . .	84
3.12. Agentification of knowledge and organizational memory . . . . .	86
3.13. Setting up the membrane network of an autonomous system . . . . .	94
3.14. Behavioral learning of the autonomous system . . . . .	96

<b>Chapter 4. Generation of Current Representation and Tendencies</b> . . . . .	105
4.1. Introduction. . . . .	105
4.2. Generation of current representation and semantic lattices . . . . .	105
4.2.1. Openness and deployment: major properties of autonomous systems . . . . .	106
4.2.2. Incentive-based control and evaluation agents. . . . .	107
4.2.3. Evaluation agents' access to organizational memory . . . . .	110
4.2.4. The role of evaluation agents in the extracted lattice . . . . .	110
4.2.5. The notion of dynamic lattices . . . . .	110
4.2.6. Algorithms for generating representations . . . . .	111
4.2.7. Mathematical interpretation. . . . .	115
4.3. The cause leading the system to choose a concrete intent. . . . .	116
4.3.1. Determination of intent . . . . .	118
4.3.2. Intent and tendencies. . . . .	120
4.4. Presentation of artificial tendencies. . . . .	123
4.5. Algorithm for the generation of a stream of representations under tendencies . . . . .	134
<b>Chapter 5. The Notions of Point of View, Intent and Organizational Memory</b> . . . . .	137
5.1. Introduction. . . . .	137
5.2. The notion of point of view in the generation of representations . . . . .	137
5.3. Three organizational principles of the interpretation system for leading the intent . . . . .	144
5.3.1. Principle of continuity engagement . . . . .	145
5.3.2. The bifurcation principle . . . . .	146
5.3.3. The principle of necessary reason and reliability . . . . .	147
5.4. Algorithms for intent decisions . . . . .	147
5.6. Organizational memory and the representation of artificial life experiences . . . . .	151
5.7. Effective autonomy and the role of the modulation component . . . . .	156
5.8. Degree of organizational freedom . . . . .	159
<b>Chapter 6. Towards the Minimal Self of an Autonomous System</b> . . . . .	161
6.1. Introduction. . . . .	161
6.2. The need for tendencies when leading the system . . . . .	161

6.3. Needs and desires of the autonomous system . . . . .	164
6.4. A scaled-down autonomous system: the artificial proto-self . . . . .	168
6.5. The internal choice of expressed tendencies and the minimal self . . . . .	171
6.6. The incentive to produce representations . . . . .	176
6.7. Minimal self affectivity: emotions and sensations . . . . .	179
6.8. Algorithms for tendency activation . . . . .	182
6.9. The feeling of generating representations . . . . .	188
<b>Chapter 7. Global Autonomy of Distributed Autonomous Systems . . . . .</b>	<b>197</b>
7.1. Introduction. . . . .	197
7.2. Enhancement of an autonomous system by itself . . . . .	197
7.3. Communication among autonomous systems in view of their union . . . . .	201
7.4. The autonomous meta-system composed of autonomous systems . . . . .	204
7.5. The system generating autonomous systems: the meta-level of artificial living . . . . .	207
<b>Conclusion . . . . .</b>	<b>211</b>
<b>Bibliography . . . . .</b>	<b>213</b>
<b>Index . . . . .</b>	<b>215</b>
