Foreword	xi
Henri MAÎTRE	
Chapter 1. Color Representation and Processing in Polar Color Spaces	1
Jesús ANGULO, Sébastien LEFÈVRE and Olivier LEZORAY	
1.1. Introduction	1
1.1.1. Notations used in this chapter	2
1.2. The HSI triplet	3
1.2.1. Intuitive approach: basic concepts and state of the art	3
1.2.2. Geometric approach: calculation of polar coordinates	5
1.3. Processing of hue: a variable on the unit circle	8
1.3.1. Can hue be represented as a scalar?	8
1.3.2. Ordering based on distance from a reference hue	9
1.3.3. Ordering with multiple references	11
1.3.4. Determination of reference hues	13
1.4. Color morphological filtering in the HSI space	15
1.4.1. Chromatic and achromatic top-hat transforms	16
1.4.2. Full ordering using lexicographical cascades	20
1.5. Morphological color segmentation in the HSI space	24
1.5.1. Color distances and segmentation by connective criteria	25
1.5.2. Color gradients and watershed segmentation	31
1.6. Conclusion	35
1.7. Bibliography	36

Chapter 2. Adaptive Median Color Filtering	41
Frédérique ROBERT-INACIO and Eric DINET	
2.1. Introduction	41
2.2. Noise	42
2.2.1. Sources of noise	43
2.2.2. Noise modeling	45
2.3. Nonlinear filtering	47
2.3.1. Vector methods	48
2.3.2. Median filter using bit mixing	50
2.4. Median filter: methods derived from vector methods	51
2.4.1. Vector filtering	51
2.4.2. Switching vector and peer group filters	53
2.4.3. Hybrid switching vector filter	55
2.4.4. Fuzzy filters	56
2.5. Adaptive filters	60
2.5.1. Spatially adaptive filter: generic method	60
2.5.2. Spatially adaptive median filter	62
2.6. Performance comparison	66
2.6.1. FSVF	67
2.6.2. FRF	67
2.6.3. PGF and FMPGF	68
2.6.4. IPGSVF	68
2.6.5. Vector filters and spatially adaptive median filter	69
2.7. Conclusion	71
2.8. Bibliography	72
Chapter 3. Anisotropic Diffusion PDEs for Regularization of Multichannel Images: Formalisms and Applications	75
David TSCHUMPERLÉ	
3.1. Introduction	75
3.2. Preliminary concepts	80
3.3. Local geometry in multi-channel images	81
3.3.1. Which geometric characteristics?	81
3.3.2. Geometry estimated using a scalar characteristic	82
3.3.3. Di Zenzo multi-valued geometry	83
3.4. PDEs for multi-channel image smoothing: overview	87
3.4.1. Variational methods	88
3.4.2. Divergence PDEs	91

3.4.3. Oriented Laplacian PDEs	94
3.4.4. Trace PDEs	97
3.5. Regularization and curvature preservation	102
3.5.1. Single smoothing direction	103
3.5.2. Analogy with line integral convolutions	105
3.5.3. Extension to multi-directional smoothing	107
3.6. Numerical implementation	109
3.7. Some applications	112
3.8. Conclusion	116
3.9. Bibliography	116
Chapter 4. Linear Prediction in Spaces with Separate Achromatic and Chromatic Information	123
Olivier ALATA, Imtnan QAZI, Jean-Christophe BURIE and Christine FERNANDEZ-MALOIGNE	
4.1. Introduction	123
4.2. Complex vector 2D linear prediction	124
4.3. Spectral analysis in the IHLS and L*a*b* color spaces	129
4.3.1. Comparison of PSD estimation methods	129
4.3.2. Study of inter-channel interference associated with color space changing transformations	132
4.4. Application to segmentation of textured color images	136
4.4.1. Prediction error distribution	136
4.4.2. Label field estimation	139
4.4.3. Experiments and results	140
4.5. Conclusion	145
4.6. Bibliography	146
Chapter 5. Region Segmentation	149
Alain CLÉMENT, Laurent BUSIN, Olivier LEZORAY and Ludovic MACAIRE	
5.1. Introduction	149
5.2. Compact histograms	150
5.2.1. Classical multi-dimensional histogram	151
5.2.2. Compact multi-dimensional histogram	152
5.2.3. Pixel classification through compact histogram analysis	156
5.3. Spatio-colorimetric classification	158
5.3.1. Introduction	158
5.3.2. Joint analysis	158

5.3.3. Successive analysis	164
5.3.4. Conclusion	166
5.4. Segmentation by graph analysis	167
5.4.1. Graphs and color images	167
5.4.2. Semi-supervised classification using graphs	173
5.4.3. Spectral classification applied to color image segmentation	176
5.5. Evaluation of segmentation methods against a “ground truth”	181
5.6. Conclusion	186
5.7. Bibliography	187

Chapter 6. Color Texture Attributes 193

Nicolas VANDENBROUCKE, Olivier ALATA, Christèle LECOMTE,
Alice POREBSKI and Imtnan QAZI

6.1. Introduction	193
6.1.1. Concept of color texture	194
6.1.2. Color texture feature specificities	197
6.1.3. Image databases	199
6.1.4. Applications involving color texture characterization	201
6.2. Statistical features	201
6.2.1. Statistical features describing color distribution	202
6.2.2. Second-order statistical features	203
6.2.3. Higher-order statistical features	211
6.2.4. Conclusion	213
6.3. Spatio-frequential features	213
6.3.1. Gabor transform	215
6.3.2. Wavelet transform	216
6.4. Stochastic modeling	217
6.4.1. Markov fields	218
6.4.2. Linear prediction models	221
6.5. Color texture classification	223
6.5.1. Color and texture approaches	224
6.5.2. Color texture and choice of color space	226
6.5.3. Experimental results	229
6.6. Conclusion	232
6.7. Bibliography	233

Chapter 7. Photometric Color Invariants for Object Recognition . . . 241
 Damien MUSELET

7.1. Introduction	241
7.1.1. Object recognition	241
7.1.2. Compromise between discriminating power and invariance	244
7.1.3. Content of this chapter	245
7.2. Basic assumptions	246
7.2.1. Hypotheses on color formation	246
7.2.2. Assumptions on the reflective properties of surface elements	248
7.2.3. Assumptions on camera sensor responses	249
7.2.4. Assumptions on the characteristics of the illumination	250
7.2.5. Hypotheses of the photometric and radiometric variation model	252
7.3. Color invariant characteristics	255
7.3.1. Inter- and intra-component color ratios	256
7.3.2. Transformations based on analysis of colorimetric distributions	266
7.3.3. Invariant derivatives	268
7.4. Conclusion	280
7.5. Bibliography	280

**Chapter 8. Color Key Point Detectors and Local
Color Descriptors 285**
 Damien MUSELET and Xiaohu SONG

8.1. Introduction	285
8.2. Color key point and region detectors	286
8.2.1. Detector quality criteria	286
8.2.2. Color key points	288
8.2.3. Color key regions	293
8.2.4. Simulation of human visual system	295
8.2.5. Learning for detection	297
8.3. Local color descriptors	299
8.3.1. Concatenation of two types of descriptors	300
8.3.2. Two successive stages for image comparison	302
8.3.3. Parallel comparisons	304
8.3.4. Spatio-colorimetric descriptors	306

8.4. Conclusion	308
8.5. Bibliography	309
Chapter 9. Motion Estimation in Color Image Sequences	317
Bertrand AUGEREAU and Jenny BENOIS-PINEAU	
9.1. Introduction	317
9.2. Extension of classical motion estimation techniques to color image spaces	318
9.2.1. Luminance images and optical flow	318
9.2.2. Estimation of optical flow in color spaces	319
9.3. Apparent motion and vector images	324
9.3.1. Motion and structure tensor in the scalar case	324
9.3.2. Stability of tensor spectral directions	325
9.3.3. Vector approach to optical flow	326
9.4. Conclusion	334
9.5. Bibliography	336
Appendix A. Appendix to Chapter 7: Summary of Hypotheses and Color Characteristic Invariances	339
A.1. Bibliography	344
List of Authors	345
Index	349
