Introduction	ix
Chapter 1. From Altruism to Sociobiology: Historical and Epistemological Summary	1
1.1. Introduction	1
1.2. The “social Darwinism” of the 19th Century.	2
1.3. Reconquest of the quest: 20th Century social neo-Darwinism	9
1.4. Expansion, disintegration signs and recent defections.	18
1.5. Missing or extra squares on the chessboard	23
1.5.1. Wilson’s initial epistemological traffic: sociobiology and behavioral ecology	24
1.5.2. Communicating evasiveness: behavior, altruism, society, culture	26
1.5.3. Cut-short dispute and perverted controversy	34
1.6. Temporary theory and permanent fantasy: will sociobiology soon be superseded?	38
Chapter 2. The Illusory Endorsement of Insects: Omissions and Arbitrary Choices	41
2.1. Entomologic stronghold and the place of social insects	41
2.1.1. Natural advantages of social entomology	42
2.1.2. A rival society, accessible to experimentation.	44
2.1.3. The extent of “societies” in insects	46
2.2. Organicism, superorganism and monospecific society	48
2.3. The beacon built by Wilson	50
2.3.1. Classification and social ranks	51
2.3.2. The enumeration of social births	54

2.4. Missing questions	56
2.5. Stigmergy <i>versus</i> haplodiploidy: a “choice of society”?	61
2.5.1. Stigmergy: from problematic to theory	62
2.5.2. Socioecological stigmergy versus sociobiological haplodiploidy	65
2.6. Subsequently emerged information	68
2.6.1. Thrips	69
2.6.2. Aphids	71
2.6.3. Termites, again	72
2.7. Polyethism, polyphenism and monomania	74
Chapter 3. Gray Langur Society and Chimpanzee Culture	77
3.1. Gray langur society shrunk to infanticide	78
3.1.1. Practical and theoretical parameters of the “case”	79
3.1.2. Strategic obsession and fact selection	82
3.1.3. From scorned comparison to repressed anthropology	86
3.2. Culture and chimpanzees	91
3.2.1. Bric-a-brac and difference in degrees	91
3.2.2. Distinction criterion and the surprise from chimpanzees	95
3.3. Non-natural selection of comparisons	100
Chapter 4. On the Specificity of Human Sociality	103
4.1. Logic of inbreeding avoidance in non-human primates	104
4.1.1. Facts	104
4.1.2. Westermarck effect: difficulties in the face of simian facts	107
4.1.3. Sexual avoidance as a social fact	110
4.2. Logic of the incest prohibition in humans	116
4.2.1. Kinship: a form of intersubjectivity specific to humans	117
4.2.2. Birth is a metaphor, and also incest	120
4.2.3. Incest prohibition as a struggle for recognition	125
4.3. Regarding sexual division of labor and food sharing	129
4.3.1. Sexual division of labor as struggle for recognition	130
4.3.2. Sharing and recognition	133
4.3.3. Failure of sociobiological explanations	135
4.4. Outline of a socioecological explanation	142
4.4.1. Forgotten issue: ownership	143
4.4.2. Ecological efficacy of the hunting-gathering regime	147
4.4.3. Evolutionary pertinence of the hunting-gathering regime	151

Chapter 5. The Sociobiological Force of Inertia and Socioecology Challenges: Conclusion	157
5.1. The meltdown of the debate	158
5.1.1. The disastrous confusion between the modes of discussion	159
5.1.2. The failure of sociobiology, demonstrated by Wilson	161
5.2. The epistemological obstacle behind the force of inertia	162
5.2.1. Ariadne's thread against history	164
5.2.2. Beanbag against interdependence.	166
5.2.3. "All other things being equal"	168
5.2.4. Diagnosis on the force of inertia of sociobiology	169
5.3. Interaction, ecology and social sciences	171
5.4. Mutual respect, a condition of interdisciplinarity	174
5.5. Conclusion.	176
