PREFACE	ix
ABBREVIATIONS	xi
INTRODUCTION	xv
CHAPTER 1. THE FOUNDATIONS OF SATELLITE NETWORKS	1
1.1. Introduction	1
1.2. Satellite orbits	3
1.2.1. Characteristics of the ellipse	3
1.2.2. Kepler's laws	4
1.2.3. Orbital parameters for earth satellites	5
1.2.4. Orbital perturbations	7
1.2.5. Maintaining and surviving an orbit	7
1.3. Time, time variation and coverage	8
1.3.1. Geometric data	8
1.3.2. Approximation of coverage	11
1.3.3. Time interval between two successive intersatellite transfers	12
1.3.4. Time and time variation	12
1.4. Orbital paths	13
1.4.1. GEO-type systems	14
1.4.2. Elliptical systems	15
1.4.3. MEO-type systems	17
1.4.4. LEO-type systems	17
1.5. Characteristics of cellular satellite systems	19

1.6. The advantages of LEO systems	22
1.7. Handover in LEO satellite networks	23
1.7.1. Link-layer handover	24
1.7.2. Network-layer handover	25
CHAPTER 2. AN INTRODUCTION TO TELETRAFFIC.	27
2.1. Introduction	27
2.2. The history of teletraffic theory and technique.	28
2.2.1. Queuing theory	28
2.2.2. Teletraffic theory.	29
2.3. Basic concepts.	30
2.3.1. The birth–death process.	31
2.3.2. Poisson process.	32
2.4. Erlang-B and Erlang-C models.	34
2.4.1. Blocking probability and the Erlang-B formula.	34
2.4.2. Queuing probability and the Erlang-C formula	36
CHAPTER 3. CHANNEL ALLOCATION STRATEGIES AND THE MOBILITY MODEL	39
3.1. Introduction	39
3.2. Channel allocation techniques	40
3.2.1. Fixed channel allocation techniques	41
3.2.2. Dynamic channel allocation techniques.	41
3.3. Spotbeam handover and priority strategies	43
3.3.1. Spotbeam handover	43
3.3.2. Priority strategies for handover requests	45
3.4. Mobility model	48
3.5. Analysis of the mobility model.	53
CHAPTER 4. EVALUATION PARAMETERS METHOD	63
4.1. Introduction	63
4.2. The advantages of the LEO MSS mobility model	64
4.3. Evaluation parameters method	71
4.3.1. Position of the MU in the cell	71
4.3.2. The moment the next handover request initializes	72
4.3.3. Maximum queuing time.	74

4.4. Pseudo-last useful instant queuing strategy	77
4.4.1. Putting handover requests in a queue	77
4.4.2. Handover request management	77
4.4.3. LUI queuing strategy	78
4.4.4. Pseudo-LUI queuing strategy	79
4.5. Guard channel strategy: dynamic channel reservation- <i>like</i>	81
4.5.1. Dynamic channel reservation technique	81
4.5.2. Dynamic channel reservation DCR-like technique	83
CHAPTER 5. ANALYTICAL STUDY.	85
5.1. Introduction	85
5.2. An analysis of FCA-QH with different queuing strategies	85
5.3. Analytical study of FCR and FCR- <i>like</i>	91
5.3.1. An analysis of FCR	91
5.3.2. An analysis of FCR-like	94
CHAPTER 6. THE RESCUING SYSTEM	101
6.1. Introduction	101
6.2. Fuzzy logic.	102
6.2.1. Definition of fuzzy subsets	102
6.2.2. Decisions in the fuzzy environment.	102
6.3. The problem	103
6.4. Rescuing system	105
CHAPTER 7. RESULTS AND SIMULATION	109
7.1. Introduction	109
7.2. The (folded) simulated network	110
7.3. Simulation results.	112
7.3.1. Verifying the simulation: a comparison with the analytical results of the FCA-QH case with different queuing strategies	113
7.3.2. A comparison of FCA and DCA, DCA-QH & FCA-QH simulation using LUI	115
7.3.3. A comparison of NPS and QH, DCA-NPS & DCA-QH simulation	116

7.3.4. Comparison of QH strategies, DCA-QH FIFO, LUI, PLUI simulation	117
7.3.5. Verifying the simulation: a comparison with the analytical results of the FCR and FCR-like case.	119
7.3.6. A comparison of DCR and DCR-like.	120
CHAPTER 8. PAB FOR IP TRAFFIC IN SATELLITE NETWORKS	127
8.1. Introduction	127
8.2. Proportional allocation of bandwidth	129
8.2.1. Implementation of PAB.	130
8.3. Determination of the label fraction	135
8.3.1. Equal fractions	135
8.3.2. AP fractions.	135
8.3.3. GP fractions.	135
8.4. Simulation and results	136
8.4.1. Single congested link	137
8.4.2. Multiple congested link.	146
8.5. Conclusion.	149
GENERAL CONCLUSION	151
APPENDIX 1	157
APPENDIX 2	161
APPENDIX 3	163
APPENDIX 4	167
APPENDIX 5	169
BIBLIOGRAPHY.	181
INDEX.	201
