

## Table of Contents

<b>Introduction</b> . . . . .	xi
Salima BOUVIER, Oana CAZACU, Patrick FRANCIOSI and Ioan R. IONESCU	
<b>PART ONE: PLASTICITY FROM THE DISCRETE DISLOCATION SCALE</b> . . . . .	1
<b>Chapter 1. Transition Methods in the Multiscale Simulation Framework: From the Atomic to the Continuum Scale</b> . . . . .	3
Ghiath MONNET	
1.1. Introduction . . . . .	3
1.2. Properties at absolute zero temperature . . . . .	5
1.2.1. Determination of effective elastic moduli . . . . .	5
1.2.2. Image stress generated by free surfaces . . . . .	9
1.2.3. Failure of the classical concept of obstacle strength . . . . .	10
1.2.4. Concept of obstacle resistance . . . . .	14
1.3. Interpretation of Molecular Dynamics results . . . . .	17
1.3.1. Determination of the activation energy as a function of the stress . . . . .	17
1.3.2. Application to edge-dislocation interaction with voids . . . . .	20
1.3.3. Equivalence temperature – activation energy – activation time . . . . .	23
1.4. Using atomistic simulation results in Dislocation Dynamics . . . . .	26
1.4.1. Validation of the transition method on the continuum level . . . . .	26
1.4.2. Determination of strengthening of random distribution of voids . . . . .	28
1.5. Discussion and conclusions . . . . .	30
1.6. Bibliography . . . . .	33

<b>Chapter 2. Multiscale Modeling of Indentation: From Atomic to Continuum . . . . .</b>	<b>37</b>
Marc FIVEL, Hyung-Jun CHANG and Marc VERDIER	
2.1. Introduction . . . . .	37
2.2. Scale transition from atom to dislocation . . . . .	39
2.2.1. Molecular Dynamics simulations . . . . .	39
2.2.2. Molecular Dynamics results . . . . .	40
2.2.3. Transition to dislocation scale . . . . .	41
2.2.4. Dislocation Dynamics simulations . . . . .	42
2.3. Scale transition: from dislocation to continuum scale . . . . .	47
2.3.1. Experimental procedure . . . . .	47
2.3.2. Finite element modeling . . . . .	48
2.4. Concluding remarks . . . . .	53
2.5. Bibliography . . . . .	53
<b>Chapter 3. Stress Distribution and Plasticity . . . . .</b>	<b>57</b>
Christophe DÉPRÉS, Ciprian MANOLE, Pascale BALLAND, Fabien DEGRÉ, Virginie POUZOLS and Laurent TABOUROT	
3.1. Introduction . . . . .	57
3.2. Part 1: Modeling of crystalline plasticity . . . . .	58
3.2.1. Introduction . . . . .	58
3.2.2. Microstructure and DDD . . . . .	63
3.2.3. Short-range stress distribution . . . . .	63
3.2.4. Average plastic deformation of the RVE . . . . .	67
3.2.5. Long-range stress . . . . .	68
3.2.6. Production of dislocations . . . . .	68
3.3. Part 2: Employing concepts for macroscopic modeling of crystal plasticity . . . . .	69
3.3.1. Introduction . . . . .	69
3.3.2. Determination of the distribution . . . . .	70
3.4. Numerical application: use of modeling concepts in finite element simulation . . . . .	72
3.4.1. Materials, constitutive law and parameter identification . . . . .	72
3.4.2. Evolution of the yield stress distribution during the deformation . . . . .	74
3.4.3. Evolution during alternating loadings . . . . .	75
3.4.4. Heterogeneity of deformation and localization . . . . .	75
3.5. Conclusions . . . . .	77
3.6. Bibliography . . . . .	77

<b>PART TWO: SUBSTRUCTURE INFLUENCE . . . . .</b>	<b>79</b>
<b>Chapter 4. Mesoscale and Multiscale Modeling of Fracture . . . . .</b>	<b>81</b>
Alan NEEDLEMAN	
4.1. Introduction . . . . .	81
4.2. General formulation . . . . .	83
4.2.1. Continuum crystal plasticity . . . . .	84
4.2.2. Discrete dislocation plasticity . . . . .	85
4.3. Crack tip fields . . . . .	88
4.4. Multiscale modeling . . . . .	91
4.5. Concluding remarks . . . . .	96
4.6. Bibliography . . . . .	97
<b>Chapter 5. Grain Size Effects in Generalized Continuum</b>	
<b>Crystal Plasticity . . . . .</b>	<b>101</b>
Nicolas M. CORDERO, Samuel FOREST, Esteban P. BUSO, Stéphane BERBENNI and Mohammed CHERKAOUI	
5.1. Introduction . . . . .	101
5.2. The microcurl model for crystal plasticity . . . . .	103
5.2.1. Balance equations . . . . .	104
5.2.2. Constitutive equations . . . . .	105
5.2.3. Internal constraint . . . . .	107
5.3. Size effects induced by grain boundaries . . . . .	107
5.3.1. Boundary value problem for polycrystals . . . . .	108
5.3.2. Overall stress and cyclic response of a polycrystalline aggregate . . . . .	110
5.4. Grain size effects in idealized aluminum polycrystals . . . . .	113
5.5. Conclusion . . . . .	118
5.6. Acknowledgment . . . . .	118
5.7. Bibliography . . . . .	118
5.8. Appendix: Summary of the main equations of the microcurl model . . . . .	120
<b>Chapter 6. Miniaturization Induced Size Effects . . . . .</b>	<b>123</b>
Clément KELLER, Anne Marie HABRAKEN, Eric HUG and Laurent DUCHÈNE	
6.1. Introduction . . . . .	123
6.2. Experimental characterization . . . . .	125
6.2.1. Experimental procedure . . . . .	125
6.2.2. Experimental evidence of the “smaller is softer” effect for Ni . . . . .	126
6.2.3. Effect of free surfaces . . . . .	129
6.3. FE simulations . . . . .	130

6.3.1. Size effect modeling . . . . .	130
6.3.2. Presentation of the model . . . . .	131
6.3.3. Identification for Ni . . . . .	132
6.3.4. Application to the study of surface effects . . . . .	135
6.4. Application to polycrystal microforming . . . . .	140
6.5. Conclusion . . . . .	144
6.6. Acknowledgments . . . . .	144
6.7. Bibliography . . . . .	145
<b>Chapter 7. On Modeling the Combined Effects of Anisotropy and Tension-Compression Asymmetry of the Matrix on the Response of the Porous Aggregate . . . . .</b>	149
Joel B. STEWART and Oana CAZACU	
7.1. Anisotropic yield criterion for the void-matrix aggregate . . . . .	150
7.2. Results . . . . .	162
7.2.1. Finite element unit cell calculations . . . . .	163
7.2.2. Application of coupled elastic-plastic damage model . . . . .	167
7.3. Concluding remarks . . . . .	173
7.4. Bibliography . . . . .	176
<b>PART THREE: DYNAMIC AND RATE EFFECTS . . . . .</b>	179
<b>Chapter 8. Eulerian Modeling of Dynamic Crystal Plasticity . . . . .</b>	181
Ioan R. IONESCU and Oana CAZACU	
8.1. Introduction . . . . .	181
8.2. Mechanical modeling . . . . .	183
8.2.1. Eulerian description of the lattice rotations . . . . .	183
8.2.2. Overstress visco-plastic flow rule . . . . .	186
8.2.3. Boundary value problem . . . . .	190
8.3. Numerical strategy . . . . .	192
8.3.1. Time discretization . . . . .	193
8.3.2. The algorithm at each time step . . . . .	194
8.4. In-plane deformation . . . . .	198
8.5. Channel-die compression . . . . .	202
8.6. Bibliography . . . . .	204
<b>Chapter 9. Wavelet Transformation Induced Multi-Time Scaling Crystal Plasticity FEM for Cyclic Deformation in Polycrystalline Materials . . . . .</b>	209
Somnath GHOSH and Pritam CHAKRABORTY	
9.1. Introduction . . . . .	209
9.2. Crystal plasticity constitutive relations . . . . .	213

9.3. Wavelet transformation based multi-time scaling methodology for cyclic crystal plasticity simulations . . . . .	216
9.3.1. Brief overview of wavelet basis functions . . . . .	219
9.3.2. Coarse scale evolutionary constitutive relations . . . . .	225
9.3.3. Coarse (cycle) scale crystal plasticity finite element equations . . . . .	226
9.4. Adaptivity for accuracy and efficiency in the WATMUS methodology . . . . .	228
9.4.1. Evolving and active wavelet basis functions . . . . .	228
9.4.2. Coarse (cycle scale) integration step size control . . . . .	232
9.5. Numerical examples solved with the WATMUS algorithm . . . . .	233
9.5.1. One-Dimensional elastic-viscoplastic problem . . . . .	233
9.5.2. 3D crystal plasticity FE simulation under cyclic loading . . . . .	239
9.6. Conclusions . . . . .	242
9.7. Acknowledgment . . . . .	243
9.8. Bibliography . . . . .	243
<b>Chapter 10. Invariant of Thermally Activated Plastic Flow and Relationship with the Strain Rate Sensitivity . . . . .</b>	<b>247</b>
Catalin R. PICU	
10.1. Introduction . . . . .	247
10.2. Experimental . . . . .	250
10.3. Results . . . . .	253
10.3.1. Invariance of ratio $\eta$ . . . . .	253
10.3.2. Testing the validity of the Cottrell-Stokes law . . . . .	257
10.4. Conclusions . . . . .	262
10.5. Acknowledgments . . . . .	263
10.6. Bibliography . . . . .	263
<b>Chapter 11. Three Dimensional Compressible Multi-material Flow Computations Using a Parallelized Levelset-based Solver . . . . .</b>	<b>265</b>
Anil KAPAH, John MOUSEL, Shiv SAMBASIVAN and H.S. UDAYKUMAR	
11.1. Introduction . . . . .	265
11.2. Methodology . . . . .	266
11.3. Governing equations and constitutive laws . . . . .	267
11.3.1. Radial return algorithm . . . . .	272
11.4. Parallel algorithm . . . . .	273
11.5. Issues with parallelizing the sharp-interface level set-based approach . . . . .	276
11.5.1. Handling of global data . . . . .	276
11.5.2. Definition and construction of ghost layer . . . . .	278
11.5.3. Moving boundary problems . . . . .	280
11.5.4. GFM at processor boundaries . . . . .	281

11.6. Validation . . . . .	283
11.6.1. Emery wind tunnel case . . . . .	284
11.6.2. Axisymmetric Taylor bar test at 227 m/s . . . . .	284
11.7. Results . . . . .	286
11.7.1. Impact at 227 m/s . . . . .	286
11.7.2. Impact at 400 m/s . . . . .	290
11.8. Conclusion . . . . .	291
11.9. Bibliography . . . . .	291
<b>Chapter 12. Numerical Modeling of Experimentally-Observed Anisotropy: A Multiscale Approach . . . . .</b>	<b>295</b>
Alisar TUNCER, Stephen KUCHNICKI and Alberto M. CUITIÑO	
12.1. Introduction . . . . .	295
12.2. Constitutive framework . . . . .	299
12.2.1. Introduction . . . . .	299
12.2.2. Field equations . . . . .	299
12.2.3. General constitutive framework . . . . .	300
12.2.4. Self-hardening . . . . .	303
12.2.5. Cross-hardening . . . . .	305
12.3. Improvements on speed and efficiency . . . . .	307
12.3.1. Implicit formulation . . . . .	308
12.3.2. Explicit formulation . . . . .	308
12.3.3. Subcycling formulation . . . . .	309
12.3.4. Constitutive level testing . . . . .	310
12.3.5. Large-scale simulation results . . . . .	312
12.3.6. Rolling test of FCC aluminum . . . . .	312
12.3.7. Polycrystal tests . . . . .	314
12.3.8. Remarks . . . . .	315
12.4. Predicting anisotropy . . . . .	316
12.4.1. Introduction . . . . .	316
12.4.2. Orientation selection . . . . .	317
12.4.3. Numerical simulation results . . . . .	321
12.5. Conclusions . . . . .	324
12.6. Bibliography . . . . .	325
<b>List of Authors . . . . .</b>	<b>329</b>
<b>Index . . . . .</b>	<b>333</b>
