<b>Introduction</b> . . . . .	ix
<b>Part 1. Informational Generation of the Universe</b> . . . . .	1
<b>Chapter 1. The Computable Model, Computer Science and Physical Concepts</b> . . . . .	3
1.1. The Turning model . . . . .	3
1.2. Computer science . . . . .	6
1.3. Formation of the Universe in physical sciences . . . . .	10
<b>Chapter 2. The Informational Components and the Organizational Law of the Formation of Space and the Elements of the Universe</b> . . . . .	15
2.1. Informational model of universe generation and organizational law . . . . .	15
2.2. The notion of generating information in the Universe. . . . .	23
2.3. The generative informational component and the informational energy of the substrate of the Universe . . . . .	34
2.4. The formation process of the Universe from the informational components . . . . .	46
<b>Chapter 3. An Agent Model to Represent Informational Components</b> . . . . .	53
3.1. Informational and control agents representing the components . . . . .	53
3.2. The generation of atoms and molecules in the informational agent model . . . . .	60

3.3. The formation of a hydrogen atom agent with informational agents . . . . .	61
3.4. Formation of a helium-type atomic agent . . . . .	68
<b>Chapter 4. The Generation of the First Molecules in the Agent Approach . . . . .</b>	<b>73</b>
4.1. The informational characteristics of the system forming the molecules. . . . .	73
4.2. Formation of simple molecules of helium hydride and dihydrogen . . . . .	75
<b>Chapter 5. The Formation of Physical Elements in the Agent Approach . . . . .</b>	<b>81</b>
5.1. The notion of aggregate mass . . . . .	82
5.2. The formation of stars and galaxies by the general action of the organizational law . . . . .	85
5.3. The informational program for the design of the universal system . . . . .	94
<b>Part 2. Life Produced by the Organizational Law . . . . .</b>	<b>101</b>
<b>Introduction to Part 2 . . . . .</b>	<b>103</b>
<b>Chapter 6. The Characteristics of Scientific Theories of Life. . . . .</b>	<b>105</b>
6.1. Evolution and selection: Charles Darwin's theory of gradual evolution and the biochemical approach. . . . .	105
6.2. The constitution of life, from DNA to developmental biology. . . . .	110
6.3. Genes and their expression: an open problem. . . . .	113
<b>Chapter 7. The Informational Interpretation of the Living . . . . .</b>	<b>119</b>
7.1. Origin of the living and bifurcation of the organizational law . . . . .	120
7.2. Evolutionary reproduction . . . . .	133
7.3. Informational action of reproduction of life with morphological patterns . . . . .	140
7.4. The application of the organizational law in the reproduction process . . . . .	148
7.5. The continuous evolution of life . . . . .	155
7.6. The human species in the organizational evolution of life . . . . .	161
7.7. The informational envelope of the planet Earth today. . . . .	171

<b>Conclusion</b> .....	175
<b>References</b> .....	177
<b>Index</b> .....	179
