<b>Foreword</b> . . . . .	xvii
Bruno DAVID	
<b>Acknowledgments</b> . . . . .	xxi
Roseli PELLENS	
<b>Chapter 1. Natural History Collections: An Essential Resource for Science in the 21st Century</b> . . . . .	1
Roseli PELLENS	
1.1. Collections in early 21st century science . . . . .	2
1.2. New explorations because of the magnitude and diversity of the collections' data . . . . .	3
1.3. Research using and driving the constitution of natural history collections . . . . .	5
1.3.1. Being able to return to the object: one of the major contributions of natural history collections. . . . .	6
1.3.2. Collections at the heart of highly innovative research thanks to new technologies . . . . .	7
1.3.3. A resource for global change research. . . . .	8
1.3.4. Designing the science of the future based on collections. . . . .	9
1.4. References . . . . .	11

<b>Chapter 2. Natural History Collections: An Ancient Concept in a Present and Future Perspective</b> . . . . .	13
Philippe GRANDCOLAS	
2.1. Introduction. . . . .	14
2.2. A tribute to curiosity and coupling with classifications . . . . .	14
2.3. The structuring of our thoughts and actions by an ancient concept . . . . .	16
2.4. Collections: more than species catalogues. . . . .	18
2.5. Big Data collections in space and time. . . . .	19
2.6. What future is there for the use of collections? . . . . .	20
2.7. Conclusion . . . . .	22
2.8. References . . . . .	22
<b>Chapter 3. Louis XIV's Blue Gems: Exceptional Rediscoveries at the French National Museum of Natural History</b> . . . . .	27
François FARGES	
3.1. Introduction. . . . .	29
3.2. A scientific investigation of color. . . . .	31
3.3. The digital decoding of the creative genius of the royal gem cutter. . . . .	32
3.4. Epilogue: toward a renaissance... . . . .	35
3.5. References . . . . .	36
<b>Chapter 4. Rediscovering Human Mummies: Unpublished data on the Chachapoya Mummy Exhibited at the Musée de l'Homme</b> . . . . .	37
Aline THOMAS, Arnaud ANSART, Christophe BOU, Jean-Bernard HUCHET, Véronique LABORDE, Samuel MERIGEAUD and Éloïse QUETEL	
4.1. Introduction. . . . .	38
4.1.1. The <i>Muséum</i> 's collection of human mummies . . . . .	38
4.1.2. Origin, discovery, donation and exhibition: a brief history of the mummy . . . . .	40
4.2. Materials and methods . . . . .	43
4.2.1. The MNHN-HA-30187 mummy: position of the body, measurements and external appearance . . . . .	43
4.2.2. Medical imaging protocol and technique . . . . .	45
4.2.3. Protocol for experimental reproduction of trepanation . . . . .	45

4.3. Results . . . . .	46
4.3.1. Basic biological identity . . . . .	46
4.3.2. Osteo-dental status . . . . .	47
4.3.3. Internal organs . . . . .	48
4.3.4. Archeoentomology . . . . .	50
4.3.5. Cranial trepanation: location, size and mode of operation . . . . .	52
4.4. Discussion . . . . .	54
4.4.1. Identity of the deceased and health status . . . . .	54
4.4.2. Treatment of the corpse and embalming . . . . .	55
4.4.3. Chronology of mortuary gestures . . . . .	56
4.5. Conclusion . . . . .	58
4.6. References . . . . .	59
<b>Chapter 5. Reconstructing the History of Human Populations: A Challenge for Biological Anthropology . . . . .</b>	<b>63</b>
Martin FRIESS and Manon GALLAND	
5.1. Introduction . . . . .	63
5.1.1. How human remains have also become scientific objects . . . . .	63
5.1.2. The MNHN biological anthropology collection . . . . .	64
5.1.3. Cranial morphology as an indication of biocultural processes . . . . .	65
5.2. Cranial morphology and settlement history . . . . .	66
5.2.1. A new look at the diversity of Native Americans . . . . .	69
5.3. Cranial morphology and adaptation to the environment . . . . .	71
5.3.1. Cranial diversity beyond randomness . . . . .	73
5.4. The importance of cranial collection for the advancement of research in biological anthropology . . . . .	75
5.5. References . . . . .	76
<b>Chapter 6. The Discovery of New Metal-Hyperaccumulating Plant Species in Herbaria . . . . .</b>	<b>79</b>
Vanessa R. INVERNÓN, Romane TISSERAND, Pierre JOUANNAIS, Dulce M. NAVARRETE GUTIÉRREZ, Serge MULLER, Yohan PILLON, Guillaume ECHEVARRIA and Sylvain MERLOT	
6.1. Metal-hyperaccumulating plants . . . . .	80
6.2. The screening of herbarium collections: from atomic absorption to X-ray fluorescence . . . . .	83

6.3. The discovery of new metal-hyperaccumulating plants at the MNHN herbarium . . . . .	85
6.3.1. The interest of the MNHN herbarium for the research of metal-hyperaccumulating plants . . . . .	85
6.3.2. From the herbarium to the field: new nickel hyperaccumulators in the genus <i>Orthion</i> . . . . .	87
6.3.3. <i>Rinorea multivenosa</i> , the first zinc hyperaccumulating species discovered in the Amazon basin . . . . .	88
6.3.4. A large number of manganese hyperaccumulating species to be discovered . . . . .	90
6.4. Conclusion . . . . .	91
6.5. Acknowledgments . . . . .	92
6.6. References . . . . .	92
<b>Chapter 7. Fossil Crustaceans in the Light of New Technologies</b> . . . . .	<b>95</b>
Sylvain CHARBONNIER and Marie-Béatrice FOREL	
7.1. Introduction. . . . .	96
7.2. Fossil crustaceans . . . . .	96
7.3. The radiation of fossil crustaceans . . . . .	98
7.3.1. Revealing characters with UV light (yellow fluorescence) . . . . .	98
7.3.2. Revealing characters with green light (green–orange fluorescence) . . . . .	99
7.3.3. X-ray radiography . . . . .	100
7.4. Exceptional preservation of fossil crustaceans . . . . .	102
7.5. Ostracods and paleogeography at the end of the Paleozoic . . . . .	105
7.6. References . . . . .	105
<b>Chapter 8. The “Cyanobacteria and Microalgae” Collection in the Time of “-omics”</b> . . . . .	<b>109</b>
Sébastien DUPERRON, Charlotte DUVAL, Sahima HAMLAOUI, Katia COMTE, Claude YÉPRÉMIAN and Cécile BERNARD	
8.1. Introduction. . . . .	109
8.2. A living collection supported by research . . . . .	111
8.3. New uses of the collection in basic research . . . . .	114
8.3.1. Polyphasic identification and taxonomy of cyanobacteria and microalgae . . . . .	114
8.3.2. Contribution to the evolutionary sciences. . . . .	114
8.3.3. Contribution to the study of interactions between organisms . . . . .	115

---

8.4. Enhancing the value of biological resources through the search for innovative bioactive molecules . . . . .	116
8.5. Expertise in environmental diagnosis . . . . .	118
8.6. The living collection of cyanobacteria and microalgae of today and tomorrow . . . . .	119
8.7. References . . . . .	121
<b>Chapter 9. The Collection of Cryopreserved Cells and Tissues of Vertebrates: Methods and Application . . . . .</b>	<b>125</b>
Michèle GERBAULT-SEUREAU and Bernard DUTRILLAUX	
9.1. Introduction. . . . .	126
9.2. History of the collection . . . . .	126
9.3. Can all living beings be cryopreserved? . . . . .	127
9.3.1. Collection, culture and freezing . . . . .	128
9.4. Current applications. . . . .	130
9.5. Current composition of the bank . . . . .	133
9.6. Perspectives . . . . .	136
9.7. References . . . . .	137
<b>Chapter 10. Herbaria, the Last Resort for Extinct Plant Species . . . . .</b>	<b>139</b>
Serge MULLER, Valérie PRIOLET, Éric BADEL and Stéphane BUORD	
10.1. Context and objectives . . . . .	140
10.2. Proposed approach and protocol. . . . .	141
10.3. First results . . . . .	142
10.3.1. Selection of target species and identification of affine species. . . . .	142
10.3.2. Assessment of the viability of available seeds . . . . .	145
10.3.3. Cultivation experiments on affine species of the target species . . . . .	149
10.4. Discussion and conclusion . . . . .	152
10.5. Acknowledgments . . . . .	154
10.6. References. . . . .	154
<b>Chapter 11. Ocean Cores, Climate Archives . . . . .</b>	<b>159</b>
Eva MORENO and Annachiara BARTOLINI	
11.1. Introduction . . . . .	160
11.2. The MNHN's oceanic collection . . . . .	160
11.3. Development of core drilling techniques. . . . .	161

11.4. Ocean cores: archives of past climate variability . . . . .	163
11.5. Climate proxies . . . . .	164
11.5.1. Temperature proxies . . . . .	165
11.5.2. Proxies of salinity . . . . .	169
11.5.3. Paleo-pH proxies and carbonate ion concentration . . . . .	170
11.6. Analytical techniques . . . . .	171
11.7. Conclusion . . . . .	172
11.8. References. . . . .	173
<b>Chapter 12. Clarifying the Radiocarbon Calibration Curve for Ancient Egypt: The Wager of Herbaria . . . . .</b>	<b>177</b>
Anita QUILES, Vanessa R. INVERNÓN, Lucile BECK, Emmanuelle DELQUE-KOLIC, Myriam GAUDEUL, Serge MULLER and Germinal ROUHAN	
12.1. Introduction . . . . .	178
12.2. Carbon-14 ( <sup>14</sup> C) dating and Egyptian chronology . . . . .	179
12.2.1. The challenge of calibration . . . . .	179
12.2.2. Chronology of ancient Egypt: contribution of <sup>14</sup> C and historic debates . . . . .	181
12.3. Specificities of the Egyptian landscape and the objective of the project . . . . .	182
12.4. The flora of Egypt in the MNHN Herbarium . . . . .	184
12.5. Analytical and statistical challenges . . . . .	186
12.5.1. Selection of herbarium specimens . . . . .	187
12.5.2. Preliminary results of <sup>14</sup> C dating . . . . .	187
12.6. Conclusion . . . . .	190
12.7. References. . . . .	191
<b>Chapter 13. Herbaria, a Window into the Evolutionary History of Crop Pathogens . . . . .</b>	<b>195</b>
Lionel GAGNEVIN, Adrien RIEUX, Jean-Michel LETT, Philippe ROUMAGNAC, Boris SZUREK, Paola CAMPOS, Claudia BAIDER, Myriam GAUDEUL and Nathalie BECKER	
13.1. Epidemics, emergences and re-emergences . . . . .	196
13.2. Development of agriculture, domestication of cultivated plants and their diseases . . . . .	197
13.3. Molecular biology and genomics as a tool for studying phytopathogenic micro-organisms . . . . .	199

13.4. Contributions of the herbarium samples . . . . .	199
13.4.1. Direct evidence . . . . .	200
13.4.2. Molecular analyses . . . . .	201
13.5. How to explore a herbarium . . . . .	203
13.6. Characteristics of old nucleic acids and their treatment . . . . .	205
13.6.1. The particular case of viral nucleic acids . . . . .	206
13.7. <i>Xanthomonas citri</i> pv. <i>citri</i> and its emergence in the Indian Ocean . .	208
13.8. Emergence and evolutionary history of plant pathogenic viruses: the geminivirus model . . . . .	209
13.8.1. Case of a species complex responsible for an emerging disease . . . . .	210
13.8.2. Case of a cryptic geminivirus . . . . .	211
13.9. Discussion. . . . .	212
13.10. Acknowledgments and funding . . . . .	213
13.11. References. . . . .	213

**Chapter 14. The Yellow-Legged Asian Hornet: Prediction of  
the Risk of Invasion and the Study of its Color Variations . . . . .** 219

Claire VILLEMANT, Quentin ROME and Adrien PERRARD

14.1. Introduction . . . . .	220
14.2. <i>Vespa velutina</i> : some elements of taxonomy and biology. . . . .	222
14.2.1. A species: 13 colored forms . . . . .	222
14.2.2. One nest per year . . . . .	223
14.2.3. Insectivore, but not exclusively . . . . .	223
14.3. Sampling of specimens . . . . .	224
14.4. The origin of invasive lineages of <i>V. velutina</i> in France and Korea . .	225
14.4.1. The history of the invasion explained by genetics . . . . .	225
14.4.2. A single queen at the origin of the invasive lineage in France . .	226
14.5. Expansion risks in Europe and worldwide . . . . .	226
14.5.1. Data and methods for inferring range and predicting invasion risk. . . . .	226
14.5.2. Strong expansion in Europe and the Northern Hemisphere. . . .	227
14.6. Origin of color and shape variations . . . . .	229
14.6.1. The importance of collection specimens. . . . .	229
14.6.2. Discordance between genetic lineages and colored forms . . . .	231
14.7. Conclusion . . . . .	232
14.8. References. . . . .	233

<b>Chapter 15. Exploring Temporal Changes in the Composition of Macroalgal Communities by Using Collections</b> . . . . .	235
Marine ROBUCHON, Éric FEUNTEUN, Romain JULLIARD, Florence ROUSSEAU and Line Le GALL	
15.1. On the constitution of macroalgal collections . . . . .	236
15.1.1. Large seaweeds . . . . .	236
15.1.2. Algal herbaria . . . . .	236
15.1.3. Data associated with the herbaria . . . . .	237
15.1.4. Specimens and scientific evidence . . . . .	237
15.1.5. The herbarium of the Dinard maritime laboratory . . . . .	239
15.2. Exploring temporal changes in species distribution . . . . .	239
15.2.1. Perspectives for exploring temporal changes in species distribution . . . . .	245
15.3. Exploring temporal changes in community composition . . . . .	246
15.3.1. Example of the study of the Dinard Herbarium . . . . .	246
15.3.2. Perspectives for exploring temporal changes in community composition . . . . .	247
15.4. Conclusion: sampling and analysis strategies for the future . . . . .	248
15.5. References. . . . .	249
<b>Chapter 16. Herbaria, Witnesses of the Stakes of Biodiversity Conservation and the Impacts of Global Changes</b> . . . . .	251
Serge MULLER, Vanessa R. INVERNÓN and Germinal ROUHAN	
16.1. Introduction . . . . .	252
16.2. Evaluation of the floristic richness and conservation issues of territories . . . . .	254
16.3. Studies of introduction pathways and colonization of invasive exotic plants and pathogens . . . . .	257
16.4. Analysis of the impact of pollution and changes in air quality . . . . .	259
16.5. Study of phenological changes in flora as a result of climate change. . . . .	260
16.6. Conclusion . . . . .	262
16.7. References. . . . .	263
<b>Chapter 17. Digital Photography <i>In Natura</i> in Zoology: More Biology in Natural History Collections?</b> . . . . .	271
Romain GARROUSTE	
17.1. Images and collections... for comparative biology . . . . .	272

17.2. Accelerating the process of the incomplete inventory of life . . . . .	274
17.3. Why more biology in natural history collections? . . . . .	277
17.4. Images in the natural sciences: a collection like any other? . . . . .	280
17.5. The Hemiptera of France: an exemplary iconography . . . . .	282
17.6. Trait databases, query automation and bio-inspiration . . . . .	282
17.7. Conclusion: a new challenge for natural history . . . . .	284
17.8. References. . . . .	285

## **Chapter 18. The Use of Large Natural History Datasets to Respond to Current Scientific and Societal Issues . . . . . 289**

Anne-Christine MONNET, Thomas HAEVERMANS, Anne-Sophie ARCHAMBEAU, Philippe GRANDCOLAS and Roseli PELLENS

18.1. Introduction . . . . .	289
18.2. Making data available: a revolution. . . . .	290
18.3. Challenges for data providers . . . . .	293
18.3.1. Reading labels or directories. . . . .	293
18.3.2. Structure of the information related to the specimens . . . . .	294
18.3.3. The taxonomic framework: moving information . . . . .	295
18.3.4. The importance of tracing the source of data . . . . .	296
18.4. The role of access portals . . . . .	296
18.4.1. The provision standards . . . . .	297
18.5. The importance of scientific analysis design in appropriating the specificities of data from collections . . . . .	299
18.5.1. Detecting the biases in collection data: advantages and opportunities for scientific analyses . . . . .	299
18.5.2. Toward a good balance between the question and the available data . . . . .	300
18.5.3. Playing the advantage of multiple spatial scales . . . . .	301
18.6. Moving from raw data to sorted data that can be used for scientific analyses. . . . .	301
18.6.1. From open data to open science, a responsibility for the traceability of data and operations . . . . .	303
18.6.2. Toward a necessary reorganization of collaborative work . . . . .	304
18.7. Conclusion . . . . .	306
18.8. References. . . . .	307

<b>Chapter 19. Is There a Need for Biocultural Collections? State of the Art and Perspectives</b> . . . . .	311
Serge BAHUCHET	
19.1. Introduction . . . . .	311
19.2. Origin of these collections . . . . .	312
19.2.1. Ethnobotany . . . . .	312
19.2.2. Ethnology . . . . .	313
19.3. Collection principles and the function of collections. . . . .	313
19.3.1. The role of objects in “Maussian” ethnology . . . . .	313
19.3.2. Ethnobotanical collections . . . . .	315
19.3.3. Biocultural collections . . . . .	317
19.4. Principles for the articulation of sets . . . . .	319
19.5. Description of the collections . . . . .	324
19.5.1. Ethnobiological specimens. . . . .	325
19.5.2. Objects and artifacts . . . . .	329
19.6. What changes? . . . . .	332
19.7. References. . . . .	334
<b>Chapter 20. Why Preserve?</b> . . . . .	337
Véronique ROUCHON	
20.1. The museum’s collections: between study and heritage . . . . .	338
20.2. Disrupting the equilibrium . . . . .	339
20.3. Preparation and storage . . . . .	342
20.4. The main principles of conservation . . . . .	346
20.5. The main principles of conservation being undermined . . . . .	347
20.6. Multiple values . . . . .	349
20.7. The scientific value of the collections . . . . .	351
20.8. Conclusion . . . . .	357
20.9. References. . . . .	357
<b>Chapter 21. Collections for Scientific Research in the 21st Century and Beyond</b> . . . . .	359
Roseli PELLENS	
21.1. Collections in the quest for knowledge . . . . .	359
21.2. Three main kinds of new uses for collections . . . . .	360
21.2.1. Enriching the life sciences, human sciences and the sciences of the universe with new technologies . . . . .	360

21.2.2. A pool of information on the environment . . . . .	360
21.2.3. The era of digital data. . . . .	362
21.3. Lessons from these new uses. . . . .	362
21.3.1. The importance of richness and diversity . . . . .	363
21.3.2. Information at the heart of new research. . . . .	363
21.3.3. Good conservation and good practices. . . . .	365
21.3.4. The importance of sets . . . . .	366
21.4. Collections in 21st century science and beyond. . . . .	367
21.5. Conclusion . . . . .	367
21.6. References. . . . .	369
<b>List of Authors . . . . .</b>	<b>373</b>
<b>Index . . . . .</b>	<b>381</b>
