

# Contents

<b>Foreword</b> . . . . .	<b>xi</b>
Michel FEIDT	
<b>Preface</b> . . . . .	<b>xiii</b>
Bernard DESMET	
<b>Chapter 1. Energy Conversion: Thermodynamic Basics</b> . . . . .	<b>1</b>
Georges DESCOMBES and Bernard DESMET	
1.1. Introduction . . . . .	1
1.2. Principles of thermodynamics . . . . .	2
1.2.1. Notion of a thermodynamic system . . . . .	2
1.2.2. First law . . . . .	2
1.2.3. Second law: mechanism of mechanical energy degradation in a heat engine . . . . .	5
1.3. Thermodynamics of gases . . . . .	14
1.3.1. Equations of state . . . . .	14
1.3.2. Calorimetric coefficients . . . . .	15
1.3.3. Ideal gas . . . . .	16
1.3.4. Van der Waals gas . . . . .	20
1.4. Conclusion . . . . .	21
1.5. References . . . . .	21

**Chapter 2. Internal Combustion Engines . . . . . 23**

Bernard DESMET

2.1. Generalities – Operating principles . . . . .	23
2.1.1. Introduction . . . . .	23
2.1.2. Spark-ignition engines . . . . .	25
2.1.3. Compression ignition engine . . . . .	28
2.1.4. Expression of useful work . . . . .	29
2.2. Theoretical air cycles . . . . .	30
2.2.1. Hypotheses . . . . .	30
2.2.2. Beau de Rochas cycle (Otto cycle) . . . . .	31
2.2.3. Miller–Atkinson cycle . . . . .	36
2.2.4. Diesel cycle . . . . .	39
2.2.5. The limited pressure cycle (mixed cycle) . . . . .	41
2.2.6. Comparison of theoretical air cycles . . . . .	43
2.3. Influences of the thermophysical properties of the working fluid on the theoretical cycles . . . . .	43
2.3.1. Thermophysical properties of the working fluid . . . . .	43
2.3.2. Reversible adiabatic transformations . . . . .	45
2.3.3. Mixed cycle for ideal and semi-ideal gases . . . . .	47
2.4. Zero-dimensional thermodynamic models . . . . .	51
2.4.1. Hypotheses . . . . .	51
2.4.2. Single-zone model . . . . .	52
2.4.3. Flow through the valves . . . . .	54
2.4.4. Heat transfer with the cylinder walls . . . . .	56
2.4.5. Combustion heat generation model . . . . .	57
2.4.6. Two-zone model . . . . .	59
2.5. Supercharging of internal combustion engines . . . . .	61
2.5.1. Basic principles of supercharging . . . . .	61
2.5.2. Supercharging by a driven compressor . . . . .	62
2.5.3. Turbocharging . . . . .	63
2.6. Conclusions and perspectives . . . . .	66
2.7. References . . . . .	67

**Chapter 3. Aeronautical and Space Propulsion . . . . . 69**

Yannick MULLER and François COTTIER

3.1. History and development of aeronautical means of propulsion . . . . .	69
3.2. Presentation of the aircraft system and its propulsive unit . . . . .	72
3.2.1. Classification and presentation of the usual architectures of aeronautical engines and their specific uses . . . . .	72
3.2.2. Study of the forces applied on the aircraft system during steady flight . . . . .	79

---

3.2.3. Definition of the propulsion forces and specific quantities of the propulsion system . . . . .	83
3.3. Operating cycle analysis . . . . .	86
3.3.1. Hypotheses and limits of validity . . . . .	86
3.3.2. Presentation of engine stations (SAE ARP 755 STANDARD) . . . . .	88
3.3.3. Study of thermodynamic transformations and their representations in T – s diagrams . . . . .	91
3.3.4. Study of the thermodynamic cycles for a gas turbine . . . . .	93
3.3.5. Study of the thermodynamic cycle of a gas turbine, branch by branch . . . . .	96
3.3.6. Improvements to the Joule–Brayton cycle . . . . .	98
3.3.7. Thermodynamic improvements for a gas turbine using energy regeneration . . . . .	101
3.3.8. Thermodynamic improvements for a gas turbine using staged compression and expansion . . . . .	103
3.4. The actual engine . . . . .	104
3.4.1. Development cycle of the turbomachine (turbojet) . . . . .	104
3.4.2. Technical disciplines in development . . . . .	108
3.4.3. Some specific problems of each module . . . . .	111
3.4.4. Secondary air system design methods . . . . .	125
3.4.5. $T_4$ and the secondary air system . . . . .	126
3.5. Perspectives . . . . .	132
3.6. References . . . . .	132
 <b>Chapter 4. Combustion and Conversion of Energy . . . . .</b>	 133
Bernard DESMET	
4.1. Generalities . . . . .	133
4.1.1. Introduction . . . . .	133
4.1.2. Premixed flame . . . . .	135
4.1.3. Diffusion flame . . . . .	136
4.1.4. Stabilization of a flame . . . . .	137
4.1.5. Flammability of air–fuel mixtures . . . . .	138
4.1.6. Combustion in internal combustion engines . . . . .	139
4.2. Theoretical combustion reactions . . . . .	141
4.2.1. Constituents of the combustible mixture . . . . .	141
4.2.2. Combustion stoichiometry . . . . .	142
4.2.3. Theoretical combustion of a lean mixture . . . . .	143
4.2.4. Theoretical combustion of a rich mixture . . . . .	144
4.3. Energy study of combustion . . . . .	144
4.3.1. Combustion at constant volume . . . . .	144
4.3.2. Combustion at constant pressure . . . . .	146
4.3.3. Relations between heating values . . . . .	147

4.3.4. Adiabatic flame and explosion temperatures . . . . .	150
4.4. Chemical kinetics of combustion . . . . .	155
4.4.1. Chain reactions . . . . .	155
4.4.2. Composition of a reactive mixture . . . . .	156
4.4.3. Reaction rates . . . . .	157
4.4.4. Establishing a chemical equilibrium . . . . .	159
4.4.5. Equilibrium composition of the combustion products . . . . .	160
4.4.6. Detailed chemical kinetics–formation of pollutants . . . . .	164
4.5. Exergy analysis of combustion . . . . .	166
4.5.1. Exergy of a gas mixture . . . . .	166
4.5.2. Exergy production from a combustion reaction . . . . .	169
4.5.3. Exergy of a fuel . . . . .	172
4.6. Conclusion . . . . .	176
4.7. References . . . . .	176
 <b>Chapter 5. Engines with an External Heat Supply</b> . . . . .	179
Georges DESCOMBES and Bernard DESMET	
5.1. Introduction . . . . .	179
5.2. The Stirling engine . . . . .	180
5.2.1. Theoretical cycle . . . . .	180
5.2.2. Characteristics of the Stirling engine . . . . .	184
5.3. The Ericsson engine . . . . .	187
5.3.1. Operating principles . . . . .	187
5.3.2. Theoretical cycles . . . . .	188
5.3.3. Improvements of the Ericsson engine . . . . .	193
5.4. Perspectives . . . . .	194
5.4.1. Advantages and disadvantages of Stirling and Ericsson engines . .	194
5.4.2. Perspectives of evolution of external combustion machines in the new decarbonized energy landscape . . . . .	195
5.5. References . . . . .	195
 <b>Chapter 6. Energy Recovery – Waste Heat Recovery</b> . . . . .	197
Mohamed MEBARKIA	
6.1. Waste energy recovery . . . . .	197
6.1.1. Energy balance of an internal combustion engine . . . . .	197
6.1.2. Degradation of mechanizable energy into uncompensated heat . .	200
6.1.3. Exergy balance in internal combustion engines . . . . .	203
6.1.4. Concept of energy recovery . . . . .	205
6.2. Cogeneration in industrial facilities . . . . .	205
6.2.1. Cogenerating gas turbines . . . . .	205
6.2.2. Cogenerating diesel engine . . . . .	207

---

6.2.3. Comparative cogeneration efficiencies . . . . .	209
6.2.4. Complex depressurized cycle . . . . .	211
6.2.5. Complex over-expansion cycle . . . . .	212
6.2.6. Conclusion . . . . .	214
6.3. Micro-cogeneration . . . . .	215
6.3.1. Introduction . . . . .	215
6.3.2. Classification . . . . .	216
6.3.3. Internal combustion engines . . . . .	217
6.3.4. Gas micro-turbines . . . . .	218
6.3.5. Fuel cells . . . . .	221
6.3.6. Thermoelectricity . . . . .	223
6.3.7. Thermoacoustics . . . . .	224
6.3.8. “Rankinized” cycles . . . . .	225
6.4. Conclusion . . . . .	227
6.5. Perspectives . . . . .	228
6.6. References . . . . .	229
<b>List of Authors</b> . . . . .	233
<b>Index</b> . . . . .	235
