|---|----|
| Preface | ix |
| Introduction | xi |
| Chapter 1. Constituents | 1 |
| 1.1. Lipid bilayers | 2 |
| 1.2. Filaments | 5 |
| 1.3. Cell walls | 8 |
| 1.4. The need for ion channels | 10 |
| 1.5. Stochastic nature of the ion channel current | 12 |
| 1.6. Channels sensitive to the membrane potential | 15 |
| 1.7. Ion channel diversity | 16 |
| 1.8. Ion pumps | 17 |
| 1.9. Symporters | 19 |
| 1.10. ATP and energy coupling | 22 |
| Chapter 2. Simple Laws | 25 |
| 2.1. Cell wall elongation law | 25 |
| 2.2. The Lockhart equation | 26 |
| 2.3. Filament growth | 28 |
| 2.4. Electrodiffusion | 31 |
| 2.5. Passive channel flux | 32 |
| 2.6. The Goldman–Hodgkin–Katz equation | 32 |
| 2.7. The <i>Fucus</i> membrane potential | 35 |

| | |
|--|------------|
| 2.8. Pump flow rate | 36 |
| 2.9. The H ⁺ -ATPase of plant cells | 38 |
| 2.10. Hyphae membrane potential. | 39 |
| 2.11. Diffusion slowed down by ligands | 42 |
| 2.12. Cell diffusion layers | 44 |
| Chapter 3. Instabilities | 47 |
| 3.1. Turing instability | 50 |
| 3.2. Jaffe–Larter–Ortoleva instability | 53 |
| 3.3. The Toko–Chosa–Yamafuji instability | 58 |
| 3.4. Vesicle and proton instability | 61 |
| 3.5. Energy competition between active transport and vesicle fusion | 66 |
| 3.6. The Goodwin, Trainor and Hentschel–Fine instabilities | 74 |
| 3.7. The Bohin–Pelcé instability | 77 |
| Chapter 4. Geometric Models | 81 |
| 4.1. Growth and elongation | 81 |
| 4.2. Crystal geometric model | 84 |
| 4.3. Geometric model of algae | 86 |
| Chapter 5. Tip Growth | 93 |
| 5.1. The hyphoid curve | 94 |
| 5.2. Hyphal growth rate | 96 |
| 5.3. Determining N | 100 |
| Chapter 6. The Neural Tree | 109 |
| 6.1. The instability that grows on the sides | 109 |
| 6.2. Secondary hyphal branches | 113 |
| 6.3. The effect of temperature on the tip growth | 117 |
| 6.4. Actin polymerization limited by the membrane | 119 |
| 6.5. Stochastic activation model | 126 |
| 6.6. The effect of adhesion | 129 |

| | |
|---|-----|
| Chapter 7. Epilogue | 133 |
| 7.1. How the parameters of a living organism adjust their values in order for cells to always remain sensitive to thermal fluctuations. | 133 |
