|---|------|
| <b>Preface</b> . . . . .  | xi   |
| <b>Introduction</b> . . . . .   | xiii |
| <b>Part 1. Theory of Stochastic Processes</b> . . . . .   | 1    |
| <b>Chapter 1. Stochastic Processes. General Properties.</b>   |      |
| <b>Trajectories, Finite-dimensional Distributions</b> . . . . .   | 3    |
| 1.1. Definition of a stochastic process . . . . .   | 3    |
| 1.2. Trajectories of a stochastic process. Some examples<br>of stochastic processes . . . . .   | 5    |
| 1.2.1. Definition of trajectory and some examples . . . . .   | 5    |
| 1.2.2. Trajectory of a stochastic process as<br>a random element . . . . .  | 8    |
| 1.3. Finite-dimensional distributions of stochastic<br>processes: consistency conditions . . . . .  | 10   |
| 1.3.1. Definition and properties of finite-dimensional<br>distributions . . . . .   | 10   |
| 1.3.2. Consistency conditions . . . . .   | 11   |
| 1.3.3. Cylinder sets and generated $\sigma$ -algebra . . . . .  | 13   |
| 1.3.4. Kolmogorov theorem on the construction of a stochastic<br>process by the family of probability distributions . . . . .                   | 15   |
| 1.4. Properties of $\sigma$ -algebra generated by cylinder sets.<br>The notion of $\sigma$ -algebra generated by a stochastic process . . . . . | 19   |

|   |        |
|---|--------|
| <b>Chapter 2. Stochastic Processes with Independent Increments</b> . . . . .  | 21     |
| 2.1. Existence of processes with independent increments<br>in terms of incremental characteristic functions . . . . . | 21     |
| 2.2. Wiener process . . . . .   | 24     |
| 2.2.1. One-dimensional Wiener process . . . . .   | 24     |
| 2.2.2. Independent stochastic processes. Multidimensional<br>Wiener process . . . . .                                 | 24     |
| 2.3. Poisson process . . . . .  | 27     |
| 2.3.1. Poisson process defined via the existence theorem . . . . .  | 27     |
| 2.3.2. Poisson process defined via the distributions<br>of the increments . . . . .                                   | 28     |
| 2.3.3. Poisson process as a renewal process . . . . .   | 30     |
| 2.4. Compound Poisson process . . . . .   | 33     |
| 2.5. Lévy processes . . . . .   | 34     |
| 2.5.1. Wiener process with a drift . . . . .  | 36     |
| 2.5.2. Compound Poisson process as a Lévy process . . . . .   | 36     |
| 2.5.3. Sum of a Wiener process with a drift and<br>a Poisson process . . . . .  | 36     |
| 2.5.4. Gamma process . . . . .  | 37     |
| 2.5.5. Stable Lévy motion . . . . .   | 37     |
| 2.5.6. Stable Lévy subordinator with stability<br>parameter $\alpha \in (0, 1)$ . . . . .                             | 38     |
| <br><b>Chapter 3. Gaussian Processes. Integration with Respect to<br/>Gaussian Processes</b> . . . . .                | <br>39 |
| 3.1. Gaussian vectors . . . . .   | 39     |
| 3.2. Theorem of Gaussian representation (theorem on<br>normal correlation) . . . . .                                  | 42     |
| 3.3. Gaussian processes . . . . .   | 44     |
| 3.4. Examples of Gaussian processes . . . . .   | 46     |
| 3.4.1. Wiener process as an example of a Gaussian process . . . . .   | 46     |
| 3.4.2. Fractional Brownian motion . . . . .   | 48     |
| 3.4.3. Sub-fractional and bi-fractional Brownian motion . . . . .   | 50     |
| 3.4.4. Brownian bridge . . . . .  | 50     |
| 3.4.5. Ornstein–Uhlenbeck process . . . . .   | 51     |
| 3.5. Integration of non-random functions with respect<br>to Gaussian processes . . . . .                              | 52     |
| 3.5.1. General approach . . . . .   | 52     |
| 3.5.2. Integration of non-random functions with respect<br>to the Wiener process . . . . .                            | 54     |
| 3.5.3. Integration w.r.t. the fractional Brownian motion . . . . .  | 57     |

3.6. Two-sided Wiener process and fractional Brownian motion: Mandelbrot–van Ness representation of fractional Brownian motion . . . . . 60

3.7. Representation of fractional Brownian motion as the Wiener integral on the compact interval . . . . . 63

**Chapter 4. Construction, Properties and Some Functionals of the Wiener Process and Fractional Brownian Motion . . . . . 67**

4.1. Construction of a Wiener process on the interval  $[0, 1]$  . . . . . 67

4.2. Construction of a Wiener process on  $\mathbb{R}^+$  . . . . . 72

4.3. Nowhere differentiability of the trajectories of a Wiener process . . . . . 74

4.4. Power variation of the Wiener process and of the fractional Brownian motion . . . . . 77

4.4.1. Ergodic theorem for power variations . . . . . 77

4.5. Self-similar stochastic processes . . . . . 79

4.5.1. Definition of self-similarity and some examples . . . . . 79

4.5.2. Power variations of self-similar processes on finite intervals . . . . . 80

**Chapter 5. Martingales and Related Processes . . . . . 85**

5.1. Notion of stochastic basis with filtration . . . . . 85

5.2. Notion of (sub-, super-) martingale: elementary properties . . . . . 86

5.3. Examples of (sub-, super-) martingales . . . . . 87

5.4. Markov moments and stopping times . . . . . 90

5.5. Martingales and related processes with discrete time . . . . . 96

5.5.1. Upcrossings of the interval and existence of the limit of submartingale . . . . . 96

5.5.2. Examples of martingales having a limit and of uniformly and non-uniformly integrable martingales . . . . . 102

5.5.3. Lévy convergence theorem . . . . . 104

5.5.4. Optional stopping . . . . . 105

5.5.5. Maximal inequalities for (sub-, super-) martingales . . . . . 108

5.5.6. Doob decomposition for the integrable processes with discrete time . . . . . 111

5.5.7. Quadratic variation and quadratic characteristics: Burkholder–Davis–Gundy inequalities . . . . . 113

5.5.8. Change of probability measure and Girsanov theorem for discrete-time processes . . . . . 116

5.5.9. Strong law of large numbers for martingales with discrete time . . . . . 120

|   |     |
|---|-----|
| 5.6. Lévy martingale stopped . . . . .  | 126 |
| 5.7. Martingales with continuous time . . . . .   | 127 |
| <b>Chapter 6. Regularity of Trajectories of Stochastic Processes</b> . . . . .  | 131 |
| 6.1. Continuity in probability and in $\mathcal{L}_2(\Omega, \mathcal{F}, P)$ . . . . .   | 131 |
| 6.2. Modification of stochastic processes: stochastically equivalent and indistinguishable processes . . . . .  | 133 |
| 6.3. Separable stochastic processes: existence of separable modification . . . . .  | 135 |
| 6.4. Conditions of $D$ -regularity and absence of the discontinuities of the second kind for stochastic processes . . . . .                           | 138 |
| 6.4.1. Skorokhod conditions of $D$ -regularity in terms of three-dimensional distributions . . . . .  | 138 |
| 6.4.2. Conditions of absence of the discontinuities of the second kind formulated in terms of conditional probabilities of large increments . . . . . | 144 |
| 6.5. Conditions of continuity of trajectories of stochastic processes . . . . .   | 148 |
| 6.5.1. Kolmogorov conditions of continuity in terms of two-dimensional distributions . . . . .  | 148 |
| 6.5.2. Hölder continuity of stochastic processes: a sufficient condition . . . . .  | 152 |
| 6.5.3. Conditions of continuity in terms of conditional probabilities . . . . .   | 154 |
| <b>Chapter 7. Markov and Diffusion Processes</b> . . . . .  | 157 |
| 7.1. Markov property . . . . .  | 157 |
| 7.2. Examples of Markov processes . . . . .   | 163 |
| 7.2.1. Discrete-time Markov chain . . . . .   | 163 |
| 7.2.2. Continuous-time Markov chain . . . . .   | 165 |
| 7.2.3. Process with independent increments . . . . .  | 168 |
| 7.3. Semigroup resolvent operator and generator related to the homogeneous Markov process . . . . .   | 168 |
| 7.3.1. Semigroup related to Markov process . . . . .  | 168 |
| 7.3.2. Resolvent operator and resolvent equation . . . . .  | 169 |
| 7.3.3. Generator of a semigroup . . . . .   | 171 |
| 7.4. Definition and basic properties of diffusion process . . . . .   | 175 |
| 7.5. Homogeneous diffusion process. Wiener process as a diffusion process . . . . .   | 179 |
| 7.6. Kolmogorov equations for diffusions . . . . .  | 181 |

|   |     |
|---|-----|
| <b>Chapter 8. Stochastic Integration</b> . . . . .  | 187 |
| 8.1. Motivation . . . . .   | 187 |
| 8.2. Definition of Itô integral . . . . .   | 189 |
| 8.2.1. Itô integral of Wiener process . . . . .   | 195 |
| 8.3. Continuity of Itô integral . . . . .   | 197 |
| 8.4. Extended Itô integral . . . . .  | 199 |
| 8.5. Itô processes and Itô formula . . . . .  | 203 |
| 8.6. Multivariate stochastic calculus . . . . .   | 212 |
| 8.7. Maximal inequalities for Itô martingales . . . . .   | 215 |
| 8.7.1. Strong law of large numbers for Itô<br>local martingales . . . . .   | 218 |
| 8.8. Lévy martingale characterization of Wiener process . . . . .   | 220 |
| 8.9. Girsanov theorem . . . . .   | 223 |
| 8.10. Itô representation . . . . .  | 228 |
| <b>Chapter 9. Stochastic Differential Equations</b> . . . . .   | 233 |
| 9.1. Definition, solvability conditions, examples . . . . .   | 233 |
| 9.1.1. Existence and uniqueness of solution . . . . .   | 234 |
| 9.1.2. Some special stochastic differential equations . . . . .   | 238 |
| 9.2. Properties of solutions to stochastic differential<br>equations . . . . .  | 241 |
| 9.3. Continuous dependence of solutions on coefficients . . . . .   | 245 |
| 9.4. Weak solutions to stochastic differential equations . . . . .  | 247 |
| 9.5. Solutions to SDEs as diffusion processes . . . . .   | 249 |
| 9.6. Viability, comparison and positivity of solutions to<br>stochastic differential equations . . . . .                            | 252 |
| 9.6.1. Comparison theorem for one-dimensional projections of<br>stochastic differential equations . . . . .                         | 257 |
| 9.6.2. Non-negativity of solutions to stochastic<br>differential equations . . . . .  | 258 |
| 9.7. Feynman–Kac formula . . . . .  | 258 |
| 9.8. Diffusion model of financial markets . . . . .   | 260 |
| 9.8.1. Admissible portfolios, arbitrage and equivalent<br>martingale measure . . . . .  | 263 |
| 9.8.2. Contingent claims, pricing and hedging . . . . .   | 266 |
| <b>Part 2. Statistics of Stochastic Processes</b> . . . . .   | 271 |
| <b>Chapter 10. Parameter Estimation</b> . . . . .   | 273 |
| 10.1. Drift and diffusion parameter estimation in the linear<br>regression model with discrete time . . . . .                       | 273 |
| 10.1.1. Drift estimation in the linear regression model<br>with discrete time in the case when the initial value is known . . . . . | 274 |

|  |            |
|--|------------|
| 10.1.2. Drift estimation in the case when the initial value is unknown . . . . .                                       | 277        |
| 10.2. Estimation of the diffusion coefficient in a linear regression model with discrete time . . . . .                | 277        |
| 10.3. Drift and diffusion parameter estimation in the linear model with continuous time and the Wiener noise . . . . . | 278        |
| 10.3.1. Drift parameter estimation . . . . .   | 279        |
| 10.3.2. Diffusion parameter estimation . . . . .   | 280        |
| 10.4. Parameter estimation in linear models with fractional Brownian motion . . . . .                                  | 281        |
| 10.4.1. Estimation of Hurst index . . . . .  | 281        |
| 10.4.2. Estimation of the diffusion parameter . . . . .  | 283        |
| 10.5. Drift parameter estimation . . . . .   | 284        |
| 10.6. Drift parameter estimation in the simplest autoregressive model . . . . .  | 285        |
| 10.7. Drift parameters estimation in the homogeneous diffusion model . . . . .   | 289        |
| <b>Chapter 11. Filtering Problem. Kalman-Bucy Filter . . . . .</b>   | <b>293</b> |
| 11.1. General setting . . . . .  | 293        |
| 11.2. Auxiliary properties of the non-observable process . . . . .   | 294        |
| 11.3. What is an optimal filter . . . . .  | 295        |
| 11.4. Representation of an optimal filter via an integral equation with respect to an observable process . . . . .     | 296        |
| 11.5. Integral Wiener-Hopf equation . . . . .  | 299        |
| <b>Appendices . . . . .</b>  | <b>311</b> |
| <b>Appendix 1 . . . . .</b>  | <b>313</b> |
| <b>Appendix 2 . . . . .</b>  | <b>329</b> |
| <b>Bibliography . . . . .</b>  | <b>363</b> |
| <b>Index . . . . .</b>   | <b>369</b> |
