Nomenclature	xv
Nikos KAMPELIS	
Chapter 1. Demand Response in Smart Zero Energy Buildings and Grids	1
Nikos KAMPELIS	
1.1. Introduction	1
1.2. Smart and zero energy buildings	2
1.3. DR and smart grids	9
1.3.1. DR and congestion management	18
1.3.2. DR and AS	19
1.3.3. DR programs	21
1.3.4. Building level DR	22
1.3.5. District level DR and microgrids	26
1.3.6. ANN-based short-term power forecasting	31
1.4. Scientific focus of the book	32
1.5. Book outline and objectives	34

Chapter 2. DR in Smart and Near-zero Energy Buildings: The Leaf Community	37
Nikos KAMPELIS, Konstantinos GOBAKIS, Vagias VAGIAS, Denia KOLOKOTSA, Laura STANDARDI, Daniela ISIDORI, Cristina CRISTALLI, Fabio Maria MONTAGNINO, Filippo PAREDES, Pietro MURATORE, Luca VENEZIA, Marina Kyprianou DRACOU, Alaric MONTENON, Andri PYRGOU, Theoni KARLESSI, Mattheos SANTAMOURIS	
2.1. The Leaf Lab industrial building, AEA Italy	39
2.2. The Leaf House residential building, AEA Italy	41
Chapter 3. Performance of Industrial and Residential Near-zero Energy Buildings	43
Nikos KAMPELIS, Konstantinos GOBAKIS, Vagias VAGIAS, Denia KOLOKOTSA, Laura STANDARDI, Daniela ISIDORI, Cristina CRISTALLI, Fabio Maria MONTAGNINO, Filippo PAREDES, Pietro MURATORE, Luca VENEZIA, Marina Kyprianou DRACOU, Alaric MONTENON, Andri PYRGOU, Theoni KARLESSI, Mattheos SANTAMOURIS	
3.1. Materials and methods	44
3.1.1. Energy simulation model	45
3.2. Energy performance analysis	51
3.2.1. The Leaf Lab	51
3.2.2. The Leaf House	57
3.3. Discussion	61
3.4. Conclusion	63
Chapter 4. HVAC Optimization Genetic Algorithm for Industrial Near-Zero Energy Building Demand Response	65
Nikos KAMPELIS, Nikolaos SIFAKIS, Denia KOLOKOTSA, Konstantinos GOBAKIS, Konstantinos KALAITZAKIS, Daniela ISIDORI, Cristina CRISTALLI	
4.1. Methodology	66
4.2. GA optimization model	70

4.3. Model of energy cost	72
4.4. Results and discussion	73
4.4.1. Scenario 1: January 25, 2018 (winter)	74
4.4.2. Scenario 2: March 27, 2018 (spring).	76
4.4.3. Scenario 3: August 15, 2018 (summer)	77
4.4.4. Scenario 4: September 10, 2018 (autumn).	81
4.4.5. Scenario 5: September 21, 2018 (autumn).	84
4.4.6. Scenario 6: November 20, 2018 (winter)	84
4.4.7. Scenario 7: November 22, 2018 (winter)	88
4.4.8. Scenario 8: November 25, 2018 (winter)	88
4.5. Conclusion and future steps	92

**Chapter 5. Smart Grid/Community Load Shifting
GA Optimization Based on Day-ahead ANN
Power Predictions 95**

Nikos KAMPELIS, Elisavet TSEKERI, Denia KOLOKOTSA,
Konstantinos KALAITZAKIS, Daniela ISIDORI,
Cristina CRISTALLI

5.1. Infrastructure and methods	100
5.2. Day-ahead GA cost of energy/load shifting optimization based on ANN hourly power predictions	104
5.3. ToU case study	106
5.3.1. ANN-based predictions	106
5.3.2. GA optimization results.	112
5.4. DA real-time case study	121
5.4.1. ANN-based predictions	121
5.4.2. Combined ANN prediction/GA optimization results	126
5.5. Limitations of the proposed approach	139
5.6. Conclusion	139

Conclusions and Recommendations 143

Nikos KAMPELIS
