Preface	ix
Chapter 1. Type Theories and Semantic Studies	1
1.1. Historical development of type theories	2
1.2. Foundational semantic languages	4
1.3. Montague’s model-theoretic semantics	6
1.3.1. Simple type theory: a formal description	6
1.3.2. Montague semantics: examples and intensionality	9
1.4. MTT-semantics: formal semantics in modern type theories	10
1.4.1. A glance at MTT-semantics	10
1.4.2. MTTs as foundational semantic languages: historical notes	13
1.4.3. Merits of MTT-semantics	17
Chapter 2. Modern Type Theories	23
2.1. Judgments and contextual mechanisms	24
2.2. Type constructors	28
2.2.1. Π -Types of dependent functions	28
2.2.2. Σ -types of dependent pairs	30
2.2.3. Disjoint union types, unit types and finite types	32
2.3. Universes	33
2.3.1. <i>Prop</i> and logical propositions	33
2.3.2. Universes in linguistic semantics	35
2.3.3. Tarski-style and Russell-style universes	37
2.4. Subtyping	38
2.5. Formal presentation of type theories with signatures	43
Chapter 3. Formal Semantics in Modern Type Theories	47
3.1. Basic linguistic categories	48

3.2. Several unique features of MTT-semantics	51
3.2.1. Common nouns as types	51
3.2.2. Subtyping in MTT-semantics	54
3.2.3. Judgmental interpretations and their propositional forms	60
3.3. Adjectival modification: a case study	65
3.3.1. Intersective adjectives	67
3.3.2. Subjective adjectives	69
3.3.3. Privative adjectives	71
3.3.4. Non-committal adjectives	72
Chapter 4. Advanced Modification	75
4.1. The data	75
4.2. Gradable adjectives	80
4.3. Gradable nouns	84
4.3.1. Gradable nouns as Σ -types	85
4.4. Multidimensional adjectives	86
4.4.1. Multidimensional adjectives: going more fine-grained	87
4.5. Adverbial modification	90
4.5.1. Veridicality	91
4.5.2. Event adverbs: manner, agent-oriented and speech-act adverbs	91
4.5.3. Domain, evaluative adverbs	95
4.5.4. Intensional adverbs	96
4.6. Final remarks on modification: vagueness	98
Chapter 5. Copredication and Individuation	99
5.1. Copredication and individuation: an introduction	100
5.2. Dot-types for copredication: a brief introduction	104
5.3. Identity criteria: individuation and CNs as setoids	108
5.3.1. Inheritance of identity criteria: usual cases of individuation	110
5.3.2. Generic semantics of numerical quantifiers	112
5.3.3. Copredication with quantification	113
5.3.4. Verbs plus adjectives: more on copredication with quantification	117
5.4. Concluding remarks and related work	119
Chapter 6. Reasoning and Verifying NL Semantics in Coq	127
6.1. Proof assistant technology based on MTTs	128
6.1.1. Mathematical proofs	128
6.1.2. Software verification	128
6.2. A linguist friendly introduction to Coq	129
6.2.1. Basics of Coq: types, sorts, functions	130
6.2.2. The proof engine of Coq	132
6.2.3. Useful proof tactics in Coq	135

6.2.4. Inductive types and record types	139
6.3. MTT-semantics in Coq	142
6.3.1. Adjectival and adverbial modification	143
6.3.2. Copredication and individuation in Coq	146
6.3.3. Related work	149
Chapter 7. Advanced Topics	151
7.1. Propositional forms of judgmental interpretations: formal treatment . .	151
7.2. Dependent event types	157
7.3. Dependent categorial grammars	163
Appendices	173
Appendix 1. Simple Type Theory \mathcal{C}	175
Appendix 2. Type Constructors	177
Appendix 3. Prop and Logical Operators in Impredicative MTTs . .	181
Appendix 4. <i>And</i> for Coordination	183
Appendix 5. Formal System LF_{Δ}	187
Appendix 6. Rules for Dot-Types	191
Appendix 7. Coq Codes	193
References	209
Index	225
