Notations	ix
Introduction	xi
Chapter 1. Optimization Problems with Differentiable Objective Functions	1
1.1. Basic concepts	1
1.2. Optimization problems with objective functions of one variable	2
1.3. Optimization problems with objective functions of several variables	6
1.4. Constrained optimization problems	9
1.4.1. Problems with equality constraints	9
1.4.2. Problems with equality and inequality constraints	13
1.5. Exercises	22
Chapter 2. Convex Sets	29
2.1. Convex sets: basic definitions	29
2.2. Combinations of points and hulls of sets	34
2.3. Topological properties of convex sets	39
2.4. Theorems on separation planes and their applications	45
2.4.1. Projection of a point onto a set	45
2.4.2. Separation of two sets	47
2.5. Systems of linear inequalities and equations	52
2.6. Extreme points of a convex set	54
2.7. Exercises	58
Chapter 3. Convex Functions	67
3.1. Convex functions: basic definitions	67
3.2. Operations in the class of convex functions	75

3.3. Criteria of convexity of differentiable functions	83
3.4. Continuity and differentiability of convex functions	90
3.5. Convex minimization problem	95
3.6. Theorem on boundedness of Lebesgue set of a strongly convex function	97
3.7. Conjugate function	99
3.8. Basic properties of conjugate functions	102
3.9. Exercises	104
Chapter 4. Generalizations of Convex Functions	111
4.1. Quasi-convex functions	111
4.1.1. Differentiable quasi-convex functions	114
4.1.2. Operations that preserve quasi-convexity	116
4.1.3. Representation in the form of a family of convex functions.	117
4.1.4. The maximization problem for quasi-convex functions	118
4.1.5. Strictly quasi-convex functions	119
4.1.6. Strongly quasi-convex functions	120
4.2. Pseudo-convex functions	121
4.3. Logarithmically convex functions	124
4.3.1. Properties of logarithmically convex functions	125
4.3.2. Integration of logarithmically concave functions	126
4.4. Convexity in relation to order	127
4.5. Exercises	131
Chapter 5. Sub-gradient and Sub-differential of Finite Convex Function	137
5.1. Concepts of sub-gradient and sub-differential	137
5.2. Properties of sub-differential of convex function	139
5.3. Sub-differential mapping	142
5.4. Calculus rules for sub-differentials	145
5.5. Systems of convex and linear inequalities	155
5.6. Exercises	161
Chapter 6. Constrained Optimization Problems	163
6.1. Differential conditions of optimality	163
6.2. Sub-differential conditions of optimality	167
6.3. Exercises	169
6.4. Constrained optimization problems	170
6.4.1. Principle of indeterminate Lagrange multipliers	170
6.4.2. Differential form of the Kuhn–Tucker theorem	177
6.4.3. Second-order conditions of optimality	180
6.5. Exercises	184
6.6. Dual problems in convex optimization	185

6.6.1. Kuhn–Tucker vector	186
6.6.2. Dual optimization problems	189
6.6.3. Kuhn–Tucker theorem for non-differentiable functions	194
6.6.4. Method of perturbations	199
6.6.5. Economic interpretations of the Kuhn–Tucker vector	203
6.7. Exercises	205
Solutions, Answers and Hints	207
