<b>Chapter 1. Active Galactic Nuclei: Competition Between Accretion and Ejection</b> . . . . .	1
Suzy COLLIN-ZAHN	
1.1. History: discovery and initial observations . . . . .	1
1.2. Important observational properties . . . . .	7
1.2.1. AGNs across the electromagnetic spectrum . . . . .	7
1.2.2. Variability (non-radio AGN). . . . .	18
1.3. Interpretation I: thermal processes . . . . .	19
1.3.1. General information . . . . .	19
1.3.2. Formation of BLR and NLR spectra . . . . .	22
1.3.3. Permitted and forbidden lines . . . . .	25
1.3.4. Variability of the allowed lines and of the continuous, reverberation mapping. . . . .	29
1.3.5. Hot gas. . . . .	34
1.4. Interpretation II: theoretical models . . . . .	35
1.4.1. Black hole . . . . .	35
1.4.2. The accretion disk. . . . .	37
1.4.3. BLR and NLR. . . . .	44
1.4.4. The dusty torus . . . . .	46
1.4.5. Hot environment: wind . . . . .	47
1.5. Towards a unified vision of AGNs . . . . .	50
1.5.1. General information . . . . .	50
1.5.2. Theoretical approach . . . . .	53
1.5.3. Empirical approach . . . . .	56
1.5.4. Conclusion. . . . .	57
1.6. References . . . . .	60

**Chapter 2. The Galactic Black Hole** . . . . . 65

Mark MORRIS

2.1. Historical emergence of the Galactic black hole . . . . .	65
2.2. The mass of the Galactic black hole . . . . .	67
2.3. General relativity and the Galactic black hole. . . . .	69
2.4. The accretion flow: radiative signatures of the Galactic black hole . . . . .	72
2.4.1. Infrared emission from Sgr A* . . . . .	73
2.4.2. Variable X-ray emission from Sgr A* . . . . .	78
2.4.3. Emission mechanisms, from radio to X-rays and frequency-dependent time lags . . . . .	79
2.4.4. Long-term variations in the accretion luminosity of Sgr A* . . . . .	83
2.5. Dynamics of the accretion flow . . . . .	86
2.6. Outflows from the GBH. . . . .	88
2.6.1. An outflowing wind from the GBH accretion flow . . . . .	88
2.6.2. Does the GBH produce a jet? . . . . .	90
2.7. Perspectives . . . . .	92
2.8. References . . . . .	93

**Chapter 3. AGN Accretion Disks** . . . . . 101

Jean-Pierre LASOTA

3.1. Introduction . . . . .	101
3.2. Black holes . . . . .	102
3.2.1. The horizon . . . . .	102
3.2.2. Characteristic orbits. . . . .	104
3.2.3. Binding energy and accretion efficiency . . . . .	105
3.2.4. Rotating space. . . . .	105
3.2.5. The ergoregion . . . . .	106
3.2.6. Eddington accretion rate . . . . .	107
3.3. Disk driving mechanism; viscosity . . . . .	107
3.3.1. The $\alpha$ -prescription. . . . .	109
3.4. Geometrically thin Keplerian disks . . . . .	110
3.4.1. Disk vertical structure. . . . .	111
3.4.2. Disk radial structure. . . . .	113
3.4.3. Self-gravity . . . . .	116
3.4.4. Stationary disks . . . . .	117
3.4.5. Size of the disk . . . . .	121
3.4.6. Spectral lines from Keplerian accretion disks. . . . .	122
3.4.7. Radiative structure . . . . .	127
3.4.8. Shakura–Sunyaev thin disk solution . . . . .	129
3.5. Disk instabilities . . . . .	131
3.5.1. The thermal instability . . . . .	132

3.5.2. Thermal equilibria: the $S$ -curve . . . . .	134
3.5.3. Variability of unstable AGN disks . . . . .	136
3.6. Beyond thin disks . . . . .	139
3.6.1. Advection-dominated accretion flow toy models . . . . .	141
3.7. Disk coronae . . . . .	146
3.8. Disks, winds and jets . . . . .	148
3.8.1. The “forgotten” Shakura–Sunyaev solution . . . . .	148
3.8.2. Relativistic jets . . . . .	149
3.9. References . . . . .	152
<b>Chapter 4. Relativistic Jets and Very High Energy Mechanisms . . . . .</b>	<b>155</b>
Hélène SOL	
4.1. The advent of ground-based gamma-ray astronomy . . . . .	156
4.2. Very high energy gamma-ray observations of active galactic nuclei . . . . .	159
4.2.1. The current sample: characteristics and observational biases . . . . .	159
4.2.2. Variability of AGNs at very high energies . . . . .	161
4.2.3. Spectral energy distribution . . . . .	164
4.2.4. Classification of sources . . . . .	166
4.3. Extragalactic jets, structures observed from sub-parsec to mega-parsec scales . . . . .	168
4.3.1. Nuclear jets studied by radio interferometry below the parsec scale . . . . .	169
4.3.2. Jets extended to the kpc scale and beyond . . . . .	174
4.4. Non-thermal emissions and instantaneous radiative models . . . . .	177
4.4.1. Synchrotron emission . . . . .	177
4.4.2. Inverse Compton emission and leptonic models . . . . .	185
4.4.3. Hadronic and lepto-hadronic models . . . . .	190
4.4.4. Propagation of VHE photons: pair creation, absorption and electromagnetic cascades . . . . .	192
4.5. Particle acceleration and time-dependent radiative models . . . . .	194
4.5.1. Radiative models and temporal evolution . . . . .	195
4.5.2. Fermi acceleration mechanisms . . . . .	197
4.5.3. Magnetic reconnection . . . . .	203
4.5.4. Acceleration in the magnetosphere of massive black holes . . . . .	204
4.5.5. Variability and dynamic spectra . . . . .	207
4.6. Perspectives on active galactic nuclei at very high energies . . . . .	211
4.6.1. A contrasting current situation . . . . .	211
4.6.2. A very promising future for instruments . . . . .	212
4.6.3. The specific issue of a general reference model . . . . .	215
4.6.4. AGNs, partners of our technological societies . . . . .	219
4.7. References . . . . .	221

<b>Chapter 5. Galactic Bulge–Black Hole Co-evolution, Feeding and Feedback of AGNs</b> . . . . .	233
Françoise COMBES	
5.1. Co-evolution: mass of black holes and bulges . . . . .	233
5.1.1. How can we measure the mass of black holes? . . . . .	233
5.1.2. Bulge dispersion velocities . . . . .	238
5.1.3. Special cases and exceptions: obese black holes . . . . .	241
5.1.4. High redshift black holes . . . . .	243
5.2. Interpretations: cause or effect? . . . . .	245
5.2.1. Evolution of star formation and the accretion of black holes . . . . .	245
5.2.2. Downsizing, formation of AGNs coupled with the formation of stars . . . . .	247
5.2.3. Feedback: how can the black hole influence the bulge? . . . . .	251
5.2.4. Feedback: radiative mode and quasar wind, or mechanical mode of the radio jet . . . . .	252
5.3. Black hole fueling processes . . . . .	258
5.3.1. Problem of angular momentum, stellar processes . . . . .	258
5.3.2. Fueling from gas, gravitational torques . . . . .	261
5.3.3. Sphere of influence and molecular torus . . . . .	264
5.4. AGN feedback – efficiency . . . . .	267
5.4.1. The need for feedback . . . . .	267
5.4.2. Prototype: cooling flows . . . . .	269
5.4.3. Molecular outflows . . . . .	273
5.5. Conclusion . . . . .	275
5.6. References . . . . .	275
<b>Chapter 6. Binary Black Holes in the Gravitational Wave Universe</b> . . . . .	281
Monica COLPI	
6.1. Introduction . . . . .	282
6.2. Black holes in the cosmic landscape . . . . .	283
6.3. Gravitational waves from coalescing black hole binaries . . . . .	287
6.4. The Gravitational Wave Universe . . . . .	292
6.5. Black hole dynamics in merging galaxies . . . . .	295
6.6. Multi-messenger view of a massive black hole merger . . . . .	300
6.7. Concluding remarks . . . . .	301
6.8. References . . . . .	301
<b>List of Authors</b> . . . . .	307
<b>Index</b> . . . . .	309
