Foreword	ix
Introduction	xiii
Chapter 1. Characteristics and Main Types of Measurement	1
1.1. Introduction.	1
1.2. The basis of the measure	2
1.2.1. Definition of the measure and connected concepts	2
1.2.2. The basic scales	5
1.3. Attitude scales	9
1.3.1. The main formats of multiple scales for measuring attitudes	12
1.3.2. The choice of an attitude scale	21
1.4. Conclusion	25
1.5. Knowledge tests	25
Chapter 2. Standardizing or Constructing a Measurement Scale	27
2.1. Introduction.	27
2.2. Existing or new scale: a range of choices	28
2.2.1. Standardizing or constructing a scale: benefits and limits	29
2.2.2. A continuum of possible choices.	31
2.3. Reflection points to facilitate the choice of a scale's mode of use.	34
2.3.1. The basis for the decision	35
2.3.2. The search for equivalence	37
2.4. Conclusion	44
2.5. Knowledge tests	44

Chapter 3. Conception of a Measurement Scale	47
3.1. Introduction.	47
3.2. Conception according to the nature of indicator-construct relationships	48
3.2.1. The types of construct specification	48
3.2.2. The production protocols of a scale according to its nature	53
3.3. Conception of a single-item or multi-item measurement scale.	62
3.3.1. The C-OAR-SE procedure: controversial contributions	62
3.3.2. The choice of a scale apprehension: large or small?	65
3.4. Conclusion	67
3.5. Knowledge tests	68
Chapter 4. Construction of a Measurement Scale	69
4.1. Introduction.	69
4.2. The foundations for producing a multi-item measurement scale.	70
4.2.1. Churchill's paradigm.	70
4.2.2. Extensions and improvements to the scale development process	72
4.3. Updating the process of constructing a measurement scale.	85
4.3.1. The process of developing a scale: updated sequence	86
4.3.2. The main axes for developing a scale	89
4.4. Conclusion	95
4.5. Knowledge tests	95
Chapter 5. Design of a Measurement Scale	97
5.1. Introduction.	97
5.2. The quantitative attributes of a measurement scale	98
5.2.1. Optimal number of items	98
5.2.2. Number of response modalities.	101
5.3. The verbal components of a measurement scale	109
5.3.1. The formulation of the items	109
5.3.2. Label of the response modalities	118
5.4. The arrangement of the design components of a scale.	120
5.4.1. Marking the scale attributes: some results	121
5.4.2. Points of reference	127
5.5. Conclusion	129
5.6. Knowledge tests	130
Chapter 6. Quantitative Purification of a Reflective Scale	131
6.1. Introduction.	131
6.2. Examination of the dimensionality of a measurement scale	132

6.2.1. The contributions of exploratory factor analysis to the scale development process	133
6.2.2. The implementation of exploratory factor analysis	135
6.2.3. Practices for better use of exploratory factor analysis	139
6.3. The true value model	144
6.4. Reliability	147
6.4.1. Conventional tests of the reliability of a measurement scale	147
6.4.2. Some recommendations for reliability testing	151
6.5. Conclusion	153
6.6. Knowledge tests	154
Chapter 7. Validity of a Measurement Scale	155
7.1. Introduction.	155
7.2. The main forms of the validity of a measurement scale	156
7.2.1. Content validity	156
7.2.2. Construct validity	163
7.2.3. Nomological validity	163
7.3. Protocols for checking the construct validity	168
7.3.1. The multitrait-multimethod matrix (MTMM)	169
7.3.2. Confirmatory factor analysis	173
7.4. Practical guides for assessing the validity of a measurement scale	179
7.4.1. Focus on confirmatory factor analysis (CFA)	179
7.4.2. Focus on the multitrait-multimethod matrix (MTMM).	181
7.4.3. Synergy in perspective.	183
7.5. Conclusion	186
7.6. Knowledge test.	187
Conclusion	189
