<b>Introduction</b> . . . . .	xi
Pierre BARBAROUX	
<b>Part 1. Transformation of the Innovation Organization Model in the Defence Sector</b> . . . . .	1
<b>Chapter 1. Innovation Dynamics in Defence Industries</b> . . . . .	3
Jean BELIN and Marianne GUILLE	
1.1. Introduction . . . . .	3
1.2. Transformation of the defence industry's innovation environment . . . . .	4
1.2.1. Changes in the science and technology system . . . . .	5
1.2.2. Intensifying competition and increasing complexity of the knowledge mobilized . . . . .	10
1.2.3. Less dependence on defence financing . . . . .	14
1.3. Opening of the defence sector . . . . .	19
1.3.1. Development of duality . . . . .	19
1.3.2. More cooperation . . . . .	21
1.3.3. New institutions and stronger links with academic research . . . . .	23
1.4. Conclusion . . . . .	26
1.5. References . . . . .	27

<b>Chapter 2. Evolution of the Aerospace and Defence Innovation Model: Intensifying Science and Technology Relationships</b> . . . . .	31
Cécile FAUCONNET	
2.1. Introduction. . . . .	31
2.2. Reflection framework. . . . .	33
2.2.1. Defence innovation. . . . .	33
2.2.2. Knowledge-based innovation. . . . .	35
2.3. Methodology . . . . .	37
2.3.1. Bibliometric approach . . . . .	37
2.3.2. Data source and analysis. . . . .	39
2.4. Results. . . . .	43
2.4.1. Descriptive analysis . . . . .	43
2.4.2. Scientific knowledge and quality of technological innovation . . . . .	47
2.5. Conclusion . . . . .	50
2.6. Appendices . . . . .	50
2.7. References . . . . .	53
<b>Chapter 3. Identification of Defence Technological Knowledge Systems: A Tool for Duality Analysis</b> . . . . .	59
François-Xavier MEUNIER	
3.1. Introduction. . . . .	59
3.2. Definition of a TKS and defence innovation . . . . .	60
3.3. Data . . . . .	63
3.4. Methodology . . . . .	66
3.5. Results. . . . .	70
3.6. Conclusion . . . . .	76
3.7. References . . . . .	77
<b>Chapter 4. Defence Aerospace Firms: What Are the Technological Coherence of Their R&amp;D?</b> . . . . .	81
Cécile FAUCONNET, Didier LEBERT, Célia ZYLA and Sylvain MOURA	
4.1. Introduction. . . . .	81
4.2. Assumptions on the relatedness and technological coherence of DA firms . . . . .	83
4.3. Measuring technological coherence . . . . .	86
4.4. The data: scope and content . . . . .	89
4.5. Main results. . . . .	96
4.6. Conclusion . . . . .	100
4.7. References . . . . .	100

<b>Chapter 5. Innovation and Legitimacy: The Case of Remotely Piloted Aircraft Systems</b> . . . . .	105
Pierre BARBAROUX	
5.1. Introduction. . . . .	105
5.2. Technological innovation and legitimacy . . . . .	108
5.3. The ecosystem of RPAS in France . . . . .	110
5.4. The role of the French Air Force RPAS Center of Excellence (CED) in legitimizing RPAS systems . . . . .	114
5.5. Implications and conclusion . . . . .	117
5.6. References . . . . .	119
<b>Part 2. Transformation of Skills and Uses Induced by Innovations</b> . . . . .	121
<b>Chapter 6. Man–machine Teaming: Towards a New Paradigm of Man–machine Collaboration?</b> . . . . .	123
Vincent FERRARI	
6.1. The challenges of collaboration . . . . .	123
6.2. The sharing of human–machine authority: the premises of collaboration . . . . .	125
6.3. Expert systems and human–system collaboration . . . . .	128
6.4. AI and collaboration between human and artificial agents . . . . .	129
6.4.1. The omnipresence of weak AI . . . . .	130
6.4.2. The opacity of weak AI . . . . .	130
6.4.3. A mistrust of weak AI . . . . .	132
6.4.4. Strong AI for human–system collaboration? . . . . .	133
6.5. Seeing beyond cognition to innovate . . . . .	134
6.6. Conclusion . . . . .	135
6.7. References . . . . .	136
<b>Chapter 7. Perspectives and Ambitions of the Maintenance in Operational Condition Renovated at the Heart of the Armament Programs: Illustrations in the Terrestrial Environment</b> . . . . .	139
Nicolas HUÉ, Walter ARNAUD and Christophe GRANDEMANGE	
7.1. Introduction. . . . .	139
7.2. Context and future challenges of the MCO . . . . .	140
7.2.1. End-to-end construction, from upstream phases to the in-service use phase . . . . .	140
7.2.2. The necessary awareness of stakeholder responsibilities. . . . .	141

7.2.3 What are the support mechanisms for better industrial accountability? . . . . .	142
7.2.4. The influence of the environment . . . . .	143
7.2.5. Financial issues that are central to the work . . . . .	144
7.3. Innovations for the MCO of the future: the prerequisite for digitization. . . . .	144
7.3.1. The necessary digitization of the MCO . . . . .	144
7.3.2. The foundation of digitization: RFID, HUMS and interoperability. . . . .	145
7.4. Innovations for the MCO of the future: research and innovation challenges . . . . .	150
7.4.1. Predictions of optimal maintenance plans: artificial intelligence and big data . . . . .	150
7.4.2. Augmented and virtual reality (AR/VR) . . . . .	151
7.4.3. 3D printing. . . . .	151
7.4.4. Remote maintenance . . . . .	152
7.5. Some safeguards. . . . .	152
7.5.1. Technology at the service of humans . . . . .	152
7.5.2. Jobs and skills that need to be managed in symbiosis . . . . .	153
7.5.3. A strategic challenge for the DITB . . . . .	153
7.6. Prospects for the future . . . . .	154
<b>Chapter 8. Technological Change and Individual Competencies: The Influence of Glass-cockpit Aircraft on French Air Force Pilots Training and Skills . . . . .</b>	<b>155</b>
Cyril CAMACHON and Pierre BARBAROUX	
8.1. Introduction. . . . .	155
8.2. The pilot training model: epistemological foundations and typology of skills. . . . .	157
8.3. Research context. . . . .	159
8.3.1. Data sources and analyses. . . . .	159
8.3.2. The initial training phase at Salon-de-Provence . . . . .	161
8.4. Digitization of glass cockpits: what are the implications for pilot training? . . . . .	163
8.4.1. The basic technical skills revisited. . . . .	163
8.4.2. Reconfiguring the training toolset? The role of embedded simulation . . . . .	169
8.5. Discussion and conclusion . . . . .	174
8.6. References . . . . .	177

---

<b>Chapter 9. Towards the Advent of High-Altitude Pseudo-Satellites (HAPS)</b> . . . . .	181
Bertrand KIRSCH and Olivier MONTAGNIER	
9.1. Introduction. . . . .	181
9.2. Capability issues: observation and telecommunications. . . . .	184
9.3. Solar flight history: projects, records and accidents . . . . .	185
9.4. Resolution of a scientific and technological paradox . . . . .	191
9.4.1. Solar energy: unlimited? . . . . .	192
9.4.2. The keys to endurance . . . . .	193
9.4.3. A technological challenge: the aeroelasticity of flexible wings . . . . .	194
9.4.4. An alternative way to remedy flutter: aeroelastic weaving . . . . .	197
9.5. Conclusion . . . . .	199
9.6. References . . . . .	200
<b>Conclusion</b> . . . . .	203
Pierre BARBAROUX
