Foreword	ix
Preface	xiii
Introduction	xv
Abbreviations and Notation	xix
Chapter 1. Gaussian Measures in Euclidean Space	1
1.1. The change of variables formula	1
1.2. Invariance of Lebesgue measure	4
1.3. Absence of invariant measure in infinite-dimensional Hilbert space	9
1.4. Random vectors and their distributions	10
1.4.1. Random variables	11
1.4.2. Random vectors	12
1.4.3. Distributions of random vectors	14
1.5. Gaussian vectors and Gaussian measures	17
1.5.1. Characteristic functions of Gaussian vectors	17
1.5.2. Expansion of Gaussian vector	20
1.5.3. Support of Gaussian vector	22
1.5.4. Gaussian measures in Euclidean space	23
Chapter 2. Gaussian Measure in l_2 as a Product Measure	27
2.1. Space \mathbb{R}^∞	27
2.1.1. Metric on \mathbb{R}^∞	27
2.1.2. Borel and cylindrical sigma-algebras coincide	30
2.1.3. Weighted l_2 space	31
2.2. Product measure in \mathbb{R}^∞	34
2.2.1. Kolmogorov extension theorem	34

2.2.2. Construction of product measure on $\mathcal{B}(\mathbb{R}^\infty)$	36
2.2.3. Properties of product measure	38
2.3. Standard Gaussian measure in \mathbb{R}^∞	42
2.3.1. Alternative proof of the second part of theorem 2.4	45
2.4. Construction of Gaussian measure in l_2	46
Chapter 3. Borel Measures in Hilbert Space	51
3.1. Classes of operators in H	51
3.1.1. Hilbert–Schmidt operators	52
3.1.2. Polar decomposition	55
3.1.3. Nuclear operators	57
3.1.4. S -operators	62
3.2. Pettis and Bochner integrals	68
3.2.1. Weak integral	68
3.2.2. Strong integral	69
3.3. Borel measures in Hilbert space	75
3.3.1. Weak and strong moments	75
3.3.2. Examples of Borel measures	78
3.3.3. Boundedness of moment form	83
Chapter 4. Construction of Measure by its Characteristic Functional	89
4.1. Cylindrical sigma-algebra in normed space	89
4.2. Convolution of measures	93
4.3. Properties of characteristic functionals in H	96
4.4. S -topology in H	99
4.5. Minlos–Sazonov theorem	102
Chapter 5. Gaussian Measure of General Form	111
5.1. Characteristic functional of Gaussian measure	111
5.2. Decomposition of Gaussian measure and Gaussian random element	114
5.3. Support of Gaussian measure and its invariance	117
5.4. Weak convergence of Gaussian measures	125
5.5. Exponential moments of Gaussian measure in normed space	129
5.5.1. Gaussian measures in normed space	129
5.5.2. Fernique’s theorem	133
Chapter 6. Equivalence and Singularity of Gaussian Measures	143
6.1. Uniformly integrable sequences	143
6.2. Kakutani’s dichotomy for product measures on \mathbb{R}^∞	145
6.2.1. General properties of absolutely continuous measures	145
6.2.2. Kakutani’s theorem for product measures	148

6.2.3. Dichotomy for Gaussian product measures	152
6.3. Feldman–Hájek dichotomy for Gaussian measures on H	155
6.3.1. The case where Gaussian measures have equal correlation operators	155
6.3.2. Necessary conditions for equivalence of Gaussian measures	158
6.3.3. Criterion for equivalence of Gaussian measures	165
6.4. Applications in statistics	169
6.4.1. Estimation and hypothesis testing for mean of Gaussian random element	169
6.4.2. Estimation and hypothesis testing for correlation operator of centered Gaussian random element	173
Chapter 7. Solutions	179
7.1. Solutions for Chapter 1	179
7.2. Solutions for Chapter 2	193
7.2.1. Generalized Kolmogorov extension theorem	196
7.3. Solutions for Chapter 3	202
7.4. Solutions for Chapter 4	211
7.5. Solutions for Chapter 5	217
7.6. Solutions for Chapter 6	227
Summarizing Remarks	235
References	239
Index	241
