Preface	xiii
Abhishek KUMAR and Priya BATTA	
Introduction	xv
Abhishek KUMAR and Priya BATTA	
Chapter 1. Prediction of Fracture Union in Long Bones Using AI Models	1
Santosh TAKALE and Dalavi Surekha GORAKH	
1.1. Introduction.	1
1.2. Types of AI models for fracture union prediction	3
1.3. Data sources and predictive variables	5
1.4. Integration of imaging with AI	6
1.5. Performance of AI models in predicting fracture union	7
1.6. Challenges and limitations	9
1.7. Future directions	10
1.8. Conclusion	11
1.9. References	11
Chapter 2. Osteoporosis Risk Assessment in Fragility Fractures Supported by AI Analysis	15
Sandip R. PATIL and Chavan Vikrant U.	
2.1. Introduction.	15
2.2. Fragility fractures and osteoporosis: clinical significance	17
2.3. Conventional osteoporosis risk assessment methods	19
2.4. AI in medical imaging for osteoporosis	21
2.5. ML models for fracture risk prediction	22

2.6. AI-supported clinical decision systems in fragility fractures	23
2.7. Challenges, ethical considerations and data limitations	24
2.8. Conclusion	26
2.9. References	27

Chapter 3. Postoperative Alignment Assessment After Total Knee Arthroplasty with AI Assistance 31

Channapa MAHAJAN and More Seema NITIN

3.1. Introduction.	31
3.2. Conventional methods for postoperative alignment assessment after total knee arthroplasty	33
3.2.1. Plain radiography	33
3.2.2. Computed tomography.	34
3.2.3. Three-dimensional imaging and EOS systems.	34
3.2.4. Observer variability and clinical limitations	34
3.2.5. Rationale for AI-assisted assessment	35
3.3. AI in orthopedic imaging: fundamental concepts	35
3.3.1. Definitions and scope of AI in orthopedics.	35
3.3.2. DL and convolutional neural networks	36
3.3.3. Supervised, unsupervised and hybrid learning approaches	36
3.3.4. Performance metrics and validation	37
3.3.5. Clinical relevance of AI fundamentals	37
3.4. AI-assisted postoperative alignment assessment techniques after total knee arthroplasty	38
3.4.1. Radiograph-based AI alignment assessment	38
3.4.2. AI-based component segmentation and orientation analysis	39
3.4.3. CT-based and three-dimensional AI models	39
3.4.4. Integration with navigation and robotic systems.	40
3.4.5. Predictive and outcome-oriented AI models	40
3.4.6. Clinical impact and advantages.	40
3.5. Clinical validation and comparative effectiveness of AI-assisted alignment assessment	42
3.5.1. Validation against expert measurements	42
3.5.2. Time efficiency and workflow integration	42
3.5.3. Correlation with clinical outcomes.	43
3.5.4. Comparative effectiveness versus conventional methods	43
3.5.5. Multicenter and external validation	43
3.6. Challenges, limitations and ethical considerations	43
3.6.1. Data quality and bias.	44
3.6.2. Interpretability and clinical trust	44
3.6.3. Regulatory and legal considerations	44
3.6.4. Cost and infrastructure requirements	44

3.6.5. Ethical and privacy concerns	44
3.7. Future directions and emerging trends	45
3.7.1. Personalized alignment strategies	45
3.7.2. Integration with wearable and functional data	45
3.7.3. Continuous learning systems	45
3.7.4. Role in revision arthroplasty	45
3.8. Conclusion	45
3.9. References	46

Chapter 4. Functional Outcome Prediction Following Open Tibial Fractures Using AI-Based Models 51

Amol S. DHAWALE and Dalavi Surekha GORAKH

4.1. Introduction.	51
4.2. Clinical significance of open tibial fractures	52
4.3. Traditional approaches to outcome prediction	54
4.4. Overview of artificial intelligence in orthopedic trauma	55
4.5. ML techniques for functional outcome prediction	56
4.6. Data sources and feature engineering	57
4.6.1. Clinical and demographic variables	57
4.6.2. Injury and surgical characteristics	58
4.6.3. Rehabilitation and return-to-work parameters	58
4.7. Patient-reported outcome measures in AI-based prediction models	58
4.8. Prediction of rehabilitation trajectories and return to work	59
4.9. Comparison of AI-based models with traditional predictive methods	60
4.10. Clinical applications of AI-based functional outcome prediction	61
4.11. Challenges and limitations of AI-based models.	62
4.12. Ethical, legal and regulatory considerations	63
4.13. Conclusion	64
4.14. References.	65

Chapter 5. Implant Failure Risk Stratification in Orthopedic Trauma Through AI 69

Paresh PATIL and Dalavi Surekha GORAKH

5.1. Introduction.	69
5.2. Implant failure in orthopedic trauma: definitions and clinical significance.	72
5.3. Rationale for AI in implant failure risk stratification	74
5.4. Data sources for AI-based implant failure prediction	74
5.4.1. Clinical and demographic data	75

5.4.2. Radiographic and imaging data	75
5.4.3. Surgical and implant-related variables	75
5.4.4. Longitudinal and postoperative data	76
5.4.5. Data integration challenges	76
5.5. ML and DL techniques	77
5.5.1. Supervised ML models	78
5.5.2. DL approaches	78
5.5.3. Multimodal and hybrid models	79
5.6. Performance metrics and model evaluation	79
5.7. Clinical applications of AI-based risk stratification	80
5.7.1. Preoperative decision-making support	80
5.7.2. Intraoperative optimization	80
5.7.3. Postoperative monitoring and early intervention	81
5.7.4. Personalized follow-up and rehabilitation	81
5.8. Ethical, regulatory and implementation challenges	81
5.9. Conclusion	82
5.10. References.	82
Chapter 6. Surgical Site Infection Risk Assessment in Orthopedic Procedures Using AI Tools	87
Jineshwar KAPALE and Attar Tabassum M.	
6.1. Overview of surgical site infections in orthopedic procedures	87
6.2. Risk factors for SSIs in orthopedic surgery	89
6.2.1. Patient-related risk factors.	90
6.2.2. Procedure-related risk factors.	90
6.2.3. Healthcare system-related risk factors.	91
6.2.4. Interaction of risk factors	91
6.2.5. Implications for clinical practice	91
6.3. Limitations of conventional SSI risk assessment models	91
6.4. AI and ML in healthcare	93
6.5. AI-based models for SSI risk assessment in orthopedic procedures	95
6.6. Data sources and feature engineering for AI-driven SSI prediction	96
6.7. Clinical integration, ethical issues and implementation issues	97
6.8. Conclusion	99
6.9. References	99

Chapter 7. Functional Recovery Analysis After Hip Fracture Surgery Supported by AI Analytics	103
P.N. KULKARNI and Pinal Rutuja A.	
7.1. Introduction.	104
7.2. Functional recovery after hip fracture: concepts and measurement	105
7.3. AI and ML in clinical outcome prediction.	108
7.4. Digital health, wearable analytics and AI-supported monitoring of recovery.	112
7.5. Implementation challenges in AI-supported functional recovery analysis	113
7.6. AI-enabled personalization of rehabilitation and care pathways	114
7.7. Patient-centered perspectives and ethical considerations	115
7.8. Future directions in AI-supported functional recovery analysis	116
7.9. Conclusion	117
7.10. References.	117
Chapter 8. Radiographic Evaluation of Bone Healing After Intramedullary Nailing with AI Support	121
Anupam S. KOLEKAR and More Seema NITIN	
8.1. Introduction.	121
8.2. Biological and mechanical principles of bone healing after intramedullary nailing	124
8.3. Conventional radiographic assessment of bone healing	125
8.3.1. Radiographic indicators of healing.	126
8.3.2. Radiographic scoring systems	126
8.3.3. Limitations of conventional assessment.	126
8.4. Limitations of traditional radiographic evaluation	126
8.5. AI in orthopedic imaging.	128
8.6. AI-based radiographic evaluation of bone healing.	129
8.6.1. Automated callus detection and quantification.	130
8.6.2. Prediction of fracture union and non-union.	130
8.6.3. Longitudinal monitoring and decision support.	130
8.7. AI models and algorithms used in bone healing assessment	131
8.7.1. CNNs	131
8.7.2. Image segmentation models.	131
8.7.3. ML and hybrid approaches	131
8.8. Integration of AI into clinical workflows	132

8.9. Clinical impact and outcome improvement	133
8.10. Challenges, limitations and ethical considerations	134
8.11. Future directions and research opportunities	135
8.12. Conclusion	136
8.13. References.	136

Chapter 9. Decision-Making in Polytrauma Management Enhanced by AI.

Vikas DESHMUKH and Piyush Ashokrao DALKE	139
9.1. Introduction.	139
9.2. Decision-making challenges in polytrauma management.	141
9.3. AI technologies in polytrauma care.	142
9.4. AI in prehospital polytrauma management	143
9.5. Emergency department triage and early assessment	144
9.6. AI-enhanced imaging and diagnostic decision-making	145
9.7. AI in surgical decision-making and operative planning	146
9.8. AI in intensive care management of polytrauma	147
9.9. Outcome prediction and prognostication using AI.	148
9.10. Ethical, legal and implementation challenges of AI in polytrauma care	150
9.11. Future directions and emerging trends in AI-driven polytrauma decision-making	151
9.12. Conclusion	152
9.13. References.	152

Chapter 10. Outcome Prediction After Rotator Cuff Repair Using AI-Assisted Clinical Models.

Vikas DESHMUKH and Prashant S. JADHAV	157
10.1. Introduction	157
10.2. Clinical outcomes after rotator cuff repair	160
10.3. Limitations of conventional predictive models	161
10.4. AI and ML in orthopedics	161
10.5. Data sources for AI-assisted outcome prediction	162
10.6. AI models for predicting tendon healing and re-tear risk	163
10.7. Prediction of functional recovery and pain outcomes	164
10.8. Integration of wearable and rehabilitation data	164
10.9. Model performance and validation	165
10.10. Interpretability and clinical acceptance	167
10.11. Ethical, legal and practical considerations	167
10.12. Future directions	168

10.13. Implications for precision medicine	169
10.14. Conclusion.	169
10.15. References.	170
