Introduction	ix
Chapter 1. The Aurora Borealis Issue of the Affirmation of the Cartesian Mechanism and the Dispute Between Paris and Montpellier: The French Choice	1
1.1. Introduction	1
1.2. The two main systems of the aurora borealis	2
1.2.1. Halley's system	2
1.2.2. Mairan's system.	5
1.3. History of the aurora borealis in the volumes of the Académie Royale des Sciences between 1716 and 1733	8
1.3.1. The silence on Halley's system in <i>Mémoires</i> and <i>Histoire</i>	8
1.3.2. The memoir refused by the Parisian Academy of François de Plantade	13
1.4. The Montpellier actors: François de Plantade and the Société Royale des Sciences	20
1.4.1. François de Plantade, founder of the Société Royale de Montpellier.	20
1.4.2. The Société Royale des Sciences de Montpellier	21
1.5. The Parisian actors: Bernard le Bovier de Fontenelle and Jean-Jacques Dortous de Mairan, the Académie Royale des Sciences	26
1.5.1. The Académie Royale des Sciences	26
1.5.2. The permanent secretary Bernard le Bovier de Fontenelle	30
1.5.3. Jean-Jacques Dortous de Mairan	37
1.6. The London actors: Hans Sloane and Edmond Halley, the Royal Society	43
1.6.1. Hans Sloane	43
1.6.2. Edmond Halley	45
1.6.3. The Royal Society and its relations with the Académie Royale des Sciences	49
1.7. Discussion of the reasons for rejecting Plantade's submission	51

Chapter 2. Joseph-Nicolas Delisle: Grandeur and Vicissitudes of a Newtonian Scientist with Thwarted Ambitions	55
2.1. Introduction	55
2.2. Delisle in the period before his departure for Russia (1710–1725)	61
2.2.1. Delisle’s beginnings in astronomy and optics, a Newtonian	61
2.2.2. Delisle’s setbacks at the Académie Royale des Sciences	71
2.2.3. Delisle’s great project: <i>Histoire Céleste</i>	83
2.2.4. Epilogue concerning the Parisian period	89
2.3. The invitation to St. Petersburg and Delisle’s Russian period (1726–1747).	90
2.3.1. The cartographic objective of Delisle’s mission	90
2.3.2. Delisle’s means at the St. Petersburg Observatory.	97
2.4. Brief synthesis of Delisle’s scientific trajectory.	109
2.5. Conclusion	112
Chapter 3. The Creation Ex-nihilo and the Beginnings of the Imperial Russian Academy of Sciences: The Influence of Christian Wolff	115
3.1. Introduction	115
3.2. The foundation of the Imperial Academy of Sciences in St. Petersburg	117
3.2.1. Historical context	117
3.2.2. Peter the Great’s Imperial Academy of Sciences project	120
3.2.3. The birth of astronomy in Russia	122
3.3. Christian Wolff, the aurora borealis and their first observers at the Academy of Sciences in St. Petersburg	125
3.3.1. Historical context	125
3.3.2. Christian Wolff’s conference	126
3.3.3. The quartet of aurora observers at the Academy of Sciences of St. Petersburg.	131
3.3.4. The rejection of aurora observations by Mayer	135
3.3.5. Euler’s physical–mathematical explanation	143
3.3.6. Mayer’s philosophical position and possible reasons for his abandonment of aurora observation	146
3.4. The Imperial Academy of Sciences of St. Petersburg	149
3.4.1. The setting up of the Academy	149
3.4.2. The clerical and noble opposition	151
3.4.3. Wolffians versus Newtonians	155
3.4.4. The problems of the functioning of the Academy in the decades 1730–1740	161
3.4.5. The regulation of 1748 refounding the Academy	164
3.5. Conclusion	167

Chapter 4. Anders Celsius and the European Observation Networks, Setting Up a Science Society and an Astronomical Observatory in Uppsala	171
4.1. Introduction	171
4.2. The life of Celsius	173
4.2.1. The first years	173
4.2.2. The European journey	176
4.2.3. Maupertuis' expedition in Lapland	179
4.2.4. The last few years.	181
4.3. Three European networks for the observation of natural phenomena	184
4.3.1. The observations of the aurora borealis around de Mairan	185
4.3.2. Monitoring the variations of the magnetic needle according to Anders Celsius	190
4.3.3. Thermometry and meteorological records around Joseph-Nicolas Delisle.	199
4.4. The Royal Society of Uppsala and Celsius' legacy.	211
4.4.1. Historical context of the Enlightenment in Sweden	211
4.4.2. Birth and development of the Royal Society of Sciences in Uppsala.	214
4.4.3. Relations between the Royal Society and the University	219
4.4.4. Celsius' legacy	222
4.5. Conclusion	228
Chapter 5. Genesis of the Academies of Bologna and Berlin, the Involvement of Women in Astronomy and the Gender Issue.	231
5.1. Introduction	231
5.2. Three examples of "astronomical households"	236
5.2.1. The Kirchs: an artisanal-type household inspired by the guild tradition	238
5.2.2. The Manfredis: a household with a humanistic coloration inherited from the Renaissance	247
5.2.3. The Delisle family: an artisanal household where women took care of the family scientific heritage.	255
5.3. Two examples of astronomical institutions: the academies of Bologna and Berlin and their observatories.	259
5.3.1. The Academy and the Bologna Observatory	262
5.3.2. The Academy and the Observatory of Berlin.	270
5.4. Astronomical households, institutions and gender in Bologna and Berlin	280
5.5. Conclusion	287

Conclusion	289
Appendix	301
