<b>Foreword</b> . . . . .	xi
Nouredine HADJSAID and Pierre MALLET	
<b>List of Notations</b> . . . . .	xv
<b>List of Acronyms</b> . . . . .	xxiii
<b>Introduction</b> . . . . .	xxxv
<b>Chapter 1. Power Systems</b> . . . . .	1
1.1. Electricity: an essential and complex product. . . . .	1
1.2. History of industrial power systems . . . . .	4
1.2.1. Discovery of direct current and the design of the first generators . . . . .	4
1.2.2. Birth of the first power systems: public lighting systems . . . . .	5
1.2.3. The expansion of AC. . . . .	6
1.2.4. The revival of DC. . . . .	7
1.2.5. Development of power systems . . . . .	8
1.2.6. The frequency choice for power systems . . . . .	11
1.2.7. Choosing voltage levels for power systems . . . . .	14
1.2.8. Structuring the power system. . . . .	16
1.3. Technical description of the power system . . . . .	20
1.3.1. The three-phase system . . . . .	20
1.3.2. Connection mode for components of the power system . . . . .	27
1.3.3. Electrotechnical imperfections of power systems . . . . .	29

1.4. Distribution systems . . . . .	37
1.4.1. HV/MV primary substations . . . . .	37
1.4.2. MV/LV distribution substations . . . . .	41
1.5. Opening of the energy markets: appearance of new players . . . . .	49
1.5.1. Market deregulation versus technical regulation . . . . .	49
1.5.2. Historical players in the power system . . . . .	49
1.5.3. Market models around the world . . . . .	52
1.5.4. Additional players in deregulated systems . . . . .	57
1.5.5. Example of the European model . . . . .	58
1.6. Roles of consumers and producers . . . . .	64
1.6.1. Development of distributed energy resources based on renewable energies . . . . .	64
1.6.2. Change in the status of the consumer: the “prosumer” . . . . .	70
1.6.3. Distributed energy resources . . . . .	72
1.7. Conclusion . . . . .	73
1.8. References . . . . .	73

## **Chapter 2. Principles of Power Distribution System Planning . . . . .**

2.1. Methods of power distribution system planning . . . . .	81
2.1.1. Definition . . . . .	81
2.1.2. The different time scales in planning . . . . .	84
2.1.3. France’s power distribution system planning . . . . .	86
2.1.4. Indicators used in planning and the solutions commonly employed to meet them . . . . .	92
2.1.5. Planning options . . . . .	108
2.1.6. Application of techno-economic formulas on simple examples. . .	109
2.2. Typical architectures of non-distributed neutral distribution systems (European system) . . . . .	119
2.2.1. MV system architectures . . . . .	120
2.2.2. LV system architectures . . . . .	134
2.3. Typical architectures of distributed neutral systems (North American system) . . . . .	135
2.3.1. MV system architectures . . . . .	136
2.3.2. LV system architectures . . . . .	140
2.3.3. Comparison of architectures . . . . .	144
2.4. Other architectures encountered in the world . . . . .	144
2.4.1. Multi-divided and multi-connected structure (Japan and China) . .	144
2.4.2. Loop and sub-loop system (Madrid, Berlin and China) . . . . .	145
2.4.3. Two voltage levels, two types of distribution systems (Singapore) . . . . .	146

2.4.4. Secured feeder and spot network (Indonesia, Malaysia) . . . . .	147
2.4.5. United Arab Emirates . . . . .	148
2.5. Conclusion . . . . .	149
2.6. References . . . . .	150
<b>Chapter 3. Integration of Distributed Energy Resources in Distribution System Planning . . . . .</b>	<b>155</b>
3.1. Introduction. . . . .	155
3.2. Impact of distributed energy resources on the planning methods of distribution power systems . . . . .	156
3.2.1. Problems brought about by the appearance of DERs . . . . .	156
3.2.2. A need for an advanced planning tool that integrates DERs. . . . .	160
3.2.3. Government policy recommendations on the evolution of distribution system planning methods . . . . .	162
3.2.4. Transitioning to planning with DERs . . . . .	165
3.3. Phase 1: traditional “fit and forget” planning . . . . .	168
3.3.1. Allocation of DER connection costs. . . . .	169
3.3.2. Estimated hosting capacity of the distribution system . . . . .	171
3.3.3. Locational Net Benefit Analysis . . . . .	173
3.3.4. Distribution Investment Deferral Framework . . . . .	175
3.4. Phase 2: planning with DERs . . . . .	181
3.4.1. List of possible insertion solutions. . . . .	181
3.4.2. Planning without flexibility markets. . . . .	183
3.4.3. Planning with flexibility markets. . . . .	189
3.5. Conclusion . . . . .	195
3.6. References . . . . .	196
<b>Chapter 4. Planning Case Studies. . . . .</b>	<b>201</b>
4.1. Introduction. . . . .	201
4.2. State of the art of distribution systems with DERs. . . . .	205
4.2.1. New diagnostic criteria for distribution systems. . . . .	205
4.2.2. General principle for estimating the maximum DER power without imposing constraints on the system. . . . .	206
4.2.3. Decision support tools under uncertainty based on the Monte Carlo method. . . . .	209
4.3. Dense urban interconnected systems . . . . .	217
4.3.1. Structural solution: topological optimization of electrical distribution systems . . . . .	217
4.3.2. Case study 3: non-wire alternatives . . . . .	243
4.4. Rural interconnected systems . . . . .	262

---

4.4.1. Case study 4: NWA to integrate DERs into LV rural distribution systems . . . . .	262
4.4.2. Case study 5: using storage to defer investments in LV systems . . . . .	275
4.5. Off-grid systems . . . . .	280
4.5.1. Case study 6: rural electrification – Cambodia. . . . .	280
4.5.2. Case study 7: high cost, difficult access areas – Australia . . . . .	290
4.6. Conclusion . . . . .	292
4.7. References . . . . .	293
<b>Chapter 5. Mathematical Tools for Planning.</b> . . . . .	<b>295</b>
5.1. Introduction. . . . .	295
5.2. Inputting data for the planning problem . . . . .	295
5.2.1. Preliminary definitions. . . . .	295
5.2.2. Technical and economic data . . . . .	300
5.2.3. Structure of the initial electrical system. . . . .	302
5.2.4. Topological data . . . . .	305
5.2.5. Definition of sizing situations . . . . .	310
5.3. Planning: a multi-objective optimization problem under constraints . . . . .	312
5.3.1. Decision-making variables . . . . .	312
5.3.2. Definition of the multi-objective function to be optimized . . . . .	319
5.3.3. Defining constraints . . . . .	322
5.3.4. Load distribution calculation . . . . .	329
5.4. Algorithms for optimizing the planning of distribution systems. . . . .	340
5.4.1. Analysis of the optimization problem . . . . .	340
5.4.2. Breakdown of sub-problems to be optimized . . . . .	344
5.4.3. Summary of optimization methods used in planning . . . . .	346
5.4.4. Integration of uncertainties in planning . . . . .	351
5.5. Conclusion . . . . .	354
5.6. References . . . . .	354
<b>Chapter 6. Mathematical Tools for Planning: Application to Case Studies.</b> . . . . .	<b>357</b>
6.1. Introduction. . . . .	357
6.2. Master-slave decomposition method with a feedback loop and use of metaheuristics: case study no. 1 . . . . .	360
6.3. Greedy decomposition method . . . . .	365
6.3.1. Heuristics: case study no. 2a . . . . .	365
6.3.2. Brute-force search: case study no. 2b . . . . .	371
6.4. Linear programming . . . . .	373

6.4.1. Consumption curtailment (demand response): case study no. 3a . . .	373
6.4.2. Phase balancing problem – integer linear programming: case study no. 6. . . . .	378
6.5. Nonlinear programming . . . . .	379
6.5.1. Storage to remove system constraints: case study no. 5 . . . . .	379
6.5.2. Placement and sizing of storage and production units: case study no. 6. . . . .	382
6.6. Integration of uncertainties. . . . .	383
6.6.1. Monte Carlo method applied to the calculation of the DER HC and the technical and economic interest of flexibilities . . . . .	383
6.6.2. Probabilistic method applied to the technical and economic interests of flexibilities: case study no. 3b. . . . .	391
6.7. Conclusion . . . . .	398
6.8. References . . . . .	399
<b>Chapter 7. New Trends and Challenges . . . . .</b>	<b>401</b>
7.1. Introduction. . . . .	401
7.2. New architectures and new products . . . . .	402
7.2.1. A new set of values. . . . .	402
7.2.2. New objects: virtualization of assets, case of the virtual lines of the Ringo Project . . . . .	407
7.2.3. Renewed interest for direct current . . . . .	408
7.2.4. New multi-objective systemic approaches . . . . .	417
7.3. Integrated planning tools . . . . .	418
7.3.1. Why integrate? . . . . .	418
7.3.2. The challenges of data . . . . .	420
7.3.3. Including control in planning models . . . . .	422
7.3.4. The challenge of skills . . . . .	423
7.4. New economic actors and new business models . . . . .	424
7.4.1. Diversity of actors . . . . .	424
7.4.2. Diversity of topics . . . . .	425
7.4.3. Diversity of business models . . . . .	426
7.5. Conclusion . . . . .	427
7.6. References . . . . .	427
<b>Conclusion . . . . .</b>	<b>433</b>
<b>Index . . . . .</b>	<b>437</b>
