Chapter 20. Calco-carbonic Equilibrium, Correction of Aggressivity and Remineralization	1
20.1. Characteristics of water leading to calco-carbonic equilibrium.	2
20.1.1. Chemical equilibria	2
20.1.2. Aggressive water	12
20.1.3. Scaling water.	12
20.1.4. Corrosive water	12
20.2. The equilibrium reactions of water's constituents	15
20.2.1. Equilibrium pH	16
20.2.2. Langelier equation	20
20.3. Hallopeau–Dubin diagram	25
20.4. Indicative criteria to determine the aggressivity or corrosivity of water.	29
20.4.1. Indicators of aggressivity: concrete pipelines.	29
20.4.2. Corrosivity indicators.	32
20.5. The calco-carbonic equilibrium of water.	36
20.5.1. Water quality and regulations.	38
20.5.2. The correction of aggressivity.	38
20.5.3. Aggressivity correction treatments	39
20.6. Remineralization treatments	60
20.6.1. Graphic method	61
20.6.2. Processes for implementing remineralization: chemical reactions in tanks.	62
20.7. Characteristics of the various reagents used	85
20.7.1. Lime.	85
20.7.2. “Micronized” lime	86
20.7.3. Caustic soda	86

20.7.4. Caustic soda at 50%	87
20.7.5. Caustic soda flakes or grains	87
20.7.6. Sodium carbonate	88
20.7.7. Sodium bicarbonate	89
20.7.8. Calcium carbonate	89
20.7.9. Acticalmag limestone	90
20.7.10. Magno	90
20.7.11. Calcium sulfate	91
20.7.12. Calcium chloride	92
20.7.13. Carbon dioxide	92
20.7.14. Sulfuric acid (90–98%)	93
20.7.15. Hydrochloric acid	94
20.8. References	96
Chapter 21. Disinfection	99
21.1. Microorganisms present in the water	99
21.1.1. Bacteria	99
21.1.2. Indicator microorganisms or test germs	102
21.1.3. Viruses	104
21.1.4. Parasites	105
21.1.5. Micro-algae	107
21.2. Quality of potable water	108
21.2.1. French regulations	108
21.3. General rules of chemical disinfection	110
21.3.1. Disinfection mechanisms	110
21.3.2. The mode of action of chemical disinfectants	111
21.3.3. Inactivation kinetics	112
21.3.4. The notion of Ct	113
21.4. Factors affecting the efficiency of chemical disinfection	117
21.4.1. Contact time	117
21.4.2. Turbidity	118
21.4.3. Presence of oxidizable matter	118
21.4.4. pH	119
21.4.5. Injection mode and injection point	119
21.4.6. Design of the contact tank	119
21.5. Qualities of a good disinfectant	120
21.6. Chlorine disinfection	121
21.6.1. Gaseous chlorine	122
21.6.2. Hypochlorite	124
21.6.3. Chlorine application points	128
21.6.4. Oxidant demand	132

21.6.5. The implementation of chlorination	137
21.6.6. Disinfection performances with chlorine	146
21.6.7. Synthesis of chlorine reactions	148
21.7. Calcium hypochlorite	149
21.8. Chlorine dioxide disinfection	150
21.8.1. Chlorine dioxide preparation	151
21.8.2. Chlorine dioxide performances	155
21.8.3. Dechlorination	157
21.8.4. The advantages of dioxide over chlorine	159
21.8.5. The special case of the use of chlorine dioxide at a station equipped with ozone	160
21.8.6. Advantages and drawbacks of using chlorine dioxide	160
21.9. Chloramination	161
21.9.1. Principle	161
21.9.2. Implementation	163
21.9.3. Performances of monochloramine	164
21.9.4. Dechloramination	165
21.9.5. Advantages and drawbacks of chloramination	166
21.10. Proportion of chlorine in chlorine disinfectants	167
21.11. Disinfection with ozone	168
21.11.1. General remarks on ozone	168
21.11.2. Ozone production	170
21.11.3. Ozone demand	172
21.11.4. The implementation of ozonation	174
21.11.5. Performances of ozone disinfection	181
21.11.6. De-ozonation	183
21.12. Criteria for choosing a chemical disinfection technique	184
21.12.1. Practical implementation of chemical disinfection	184
21.12.2. Comparative efficiency of the main techniques	185
21.13. Another chemical disinfectant used: bromine (Br ₂)	187
21.14. Disinfection by ultraviolet radiation	187
21.14.1. General remarks on UV radiation	187
21.14.2. Inactivation mechanisms	189
21.14.3. Lethal dose and inactivation kinetics	190
21.14.4. Implementation	194
21.14.5. UV disinfection design parameters	199
21.14.6. Factors affecting the efficiency of a UV treatment	200
21.14.7. UV radiation performances	204
21.14.8. Photoreactivation	208
21.14.9. Advantages and drawbacks of UV disinfection	209
21.14.10. Conclusions on UV disinfection	209
21.15. Comparative criteria between the various chemical disinfectants . .	210
21.16. References	212

Chapter 22. Disinfection By-products	217
22.1. General aspects	217
22.2. Reaction by-products	218
22.3. Formation and evolution of chlorination by-products	222
22.4. Kinetics and formation mechanisms	224
22.4.1. Formation kinetics	224
22.4.2. Mechanisms	226
22.4.3. Chlorination of HS	228
22.4.4. Chlorination of carboxylic acids	230
22.4.5. Factors influencing the formation of DBPs	230
22.5. Regulations	238
22.6. Predictive models of CBPs	239
22.7. Removal of THMs and HAAs	240
22.7.1. Aeration	240
22.7.2. Activated carbon	242
22.7.3. Biofiltration	246
22.7.4. High-pressure membranes	246
22.8. The case of nitrosamines and NDMA	247
22.8.1. Nitrosation mechanism with HOCl	247
22.9. Oxidation by-products related to chlorine dioxide	248
22.10. Ozonation by-products	251
22.11. Recommendations	254
22.12. References	255
Chapter 23. Sludge Treatment	261
23.1. Choosing a treatment chain	262
23.2. Characteristics of drinking water sludge	263
23.2.1. The quantity of sludge produced	263
23.2.2. Sludge concentration estimate at different stages of the chain	265
23.2.3. Sludge quality: physical and chemical properties	266
23.3. Handling and storage: shovelable and stackable nature	268
23.4. Different classes of sludge	269
23.4.1. Hydroxide sludge	269
23.4.2. Softening sludge	269
23.4.3. Metal species sludge treatment	270
23.4.4. Biological sludge	270
23.4.5. The case of mixed sludge	270

23.5. Sludge composition depending on the characteristics of raw water	271
23.5.1. Surface water sludge	271
23.5.2. Treatment sludge with coagulants (Fe or Al)	272
23.5.3. Borehole sludge	272
23.6. Thickening of drinking water sludge	273
23.6.1. Function and criteria for choosing a thickener	273
23.6.2. Thickener design	275
23.6.3. Implementation of thickeners	281
23.6.4. Flotation	286
23.7. Drinking water sludge dewatering.	288
23.7.1. Plate filter.	288
23.7.2. Centrifugation	291
23.7.3. Belt filters	294
23.7.4. Filter bags	295
23.7.5. Drying beds	296
23.7.6. Sludge lagoon treatment	302
23.8. Advantages and drawbacks of the different sludge dewatering treatments	304
23.9. References.	305
Chapter 24. The Treatment Chain: Conception and Design	307
24.1. The treatment chain	309
24.2. The definition of a treatment chain	310
24.3. The stages of a treatment chain	313
24.4. The renovation of water treatment plants	315
24.4.1. Adaptation of new goals	316
24.4.2. The choice of treatment technologies	317
24.5. References.	324
Chapter 25. The Future of Water	327
25.1. The major elements of the future of water	327
25.2. Will there be enough water?	330
Index	333
Summaries of other volumes	335
