<b>Preface . . . . .</b>	<b>x<sup>i</sup></b>
Roger PRUD'HOMME, Stéphane VINCENT, Christian CHAUVEAU, Mahouton Norbert HOUNKONNOU and Kwassi ANANI	
<b>Chapter 1. Simulation of a Pollutant's Concentration Degradation in Permanent Two-Dimensional Flow Using the Finite Element Method . . . . .</b>	<b>1</b>
Deo MWELWA, David ILUNGA and Jean-Paul KATOND MBAY	
1.1. Introduction . . . . .	1
1.2. Behavior modeling . . . . .	2
1.3. Evolution of the gas plume concentration . . . . .	8
1.3.1. Definition of the variational problem . . . . .	9
1.3.2. Definitions of initial and boundary conditions . . . . .	9
1.3.3. Problem data . . . . .	10
1.4. Results and interpretation . . . . .	10
1.5. Conclusion and perspective . . . . .	13
1.6. References . . . . .	13
<b>Chapter 2. Drop Vaporization Frequency Response: An Approximate Analytical Solution for Mixed Injection Regimes . . . . .</b>	<b>15</b>
Kwassi ANANI, Roger PRUD'HOMME and Mahouton Norbert HOUNKONNOU	
2.1. Introduction . . . . .	15
2.2. Stabilized state description . . . . .	16
2.2.1. General assumptions . . . . .	16
2.2.2. Characteristic times . . . . .	18
2.2.3. Unperturbed state equations . . . . .	18
2.3. Linear analyses for small perturbations . . . . .	20
2.3.1. Linear analysis of the liquid-phase equations . . . . .	20

---

2.3.2. Gas-phase linearized equations . . . . .	23
2.3.3. Mass response factor . . . . .	24
2.4. Results and discussion. . . . .	24
2.5. Conclusion . . . . .	28
2.6. References . . . . .	28
<b>Chapter 3. Considerations about the Hill Vortex . . . . .</b>	<b>31</b>
Roger PRUD'HOMME	
3.1. Introduction . . . . .	33
3.2. Spherical liquid drop subjected to a uniform external flow at infinity . . . . .	34
3.2.1. Incompressible fluids in spherical coordinates . . . . .	35
3.2.2. Flow inside the sphere . . . . .	40
3.3. Flows of a spherical liquid drop subjected to an axial thermal gradient . . . . .	42
3.3.1. Presentation of the problem . . . . .	42
3.3.2. Thermo-capillary Hill vortex . . . . .	45
3.3.3. Other thermo-capillary flows . . . . .	47
3.4. Conclusion . . . . .	49
3.5. Appendices . . . . .	50
3.5.1. Appendix 1: reminders on 3D irrotational flows of perfect incompressible fluids: source, sink, doublet, revolution flows . . . . .	50
3.5.2. Stationary irrotational revolution flows . . . . .	52
3.5.3. Examples . . . . .	53
3.5.4. Appendix 2: rotational flows of perfect incompressible fluids . . . . .	55
3.5.5. Appendix 3: details of calculations valid inside the sphere . . . . .	57
3.5.6. Appendix 4: Legendre polynomials and spherical harmonics. . . . .	59
3.6. References . . . . .	62
<b>Chapter 4. The Fire of Weapons . . . . .</b>	<b>65</b>
Roger PRUD'HOMME	
4.1. Introduction . . . . .	65
4.2. The “flame” weapon. . . . .	67
4.2.1. The flamethrower . . . . .	67
4.2.2. The thermobaric weapon . . . . .	68
4.3. The bombs . . . . .	69
4.3.1. Napalm. . . . .	69
4.3.2. Explosive devices . . . . .	71
4.3.3. Phosphorus bombs . . . . .	72
4.4. Missiles . . . . .	73
4.5. The Space War . . . . .	73
4.6. Weapons and pollution . . . . .	74
4.7. Conclusion . . . . .	75

---

4.8. Appendices . . . . .	75
4.8.1. Appendix 1: reflections on the context and meaning of this chapter . . . . .	75
4.8.2. Appendix 2: additional information . . . . .	76
<b>Chapter 5. Shifting Interface in Spacetime . . . . .</b>	<b>81</b>
Roger PRUD'HOMME	
5.1. Introduction . . . . .	86
5.2. Reminder concerning interfaces in 3D coordinates . . . . .	87
5.2.1. Volume balances . . . . .	87
5.2.2. Balances at the interfaces . . . . .	88
5.3. Minkowski volume balance equations in spacetime . . . . .	90
5.3.1. General (special relativity, spacetime) . . . . .	90
5.3.2. 4D balances in the volume for mass-type quantities . . . . .	91
5.3.3. Electromagnetic quad tensors in the volume . . . . .	92
5.3.4. 4D momentum-energy balance in the volume . . . . .	94
5.4. The balance equations at the interface in the Minkowski spacetime . . . . .	94
5.4.1. Electromagnetic four-tensors . . . . .	95
5.4.2. Momentum-energy balance at the interface . . . . .	97
5.5. Conclusion . . . . .	98
5.6. Appendices . . . . .	98
5.6.1. Appendix 1: presentation of the Lorentz transformation . . . . .	98
5.6.2. Appendix 2: application of the Lorentz transformation into electromagnetic quantities . . . . .	100
5.6.3. Appendix 3: the laws of behavior at the interface . . . . .	100
5.6.4. Appendix 4: application examples . . . . .	102
5.7. References . . . . .	102
<b>Chapter 6. The Interest of Microgravity for the Study of Fluid Interfaces . . . . .</b>	<b>105</b>
Roger PRUD'HOMME and Kwassi ANANI	
6.1. Introduction . . . . .	106
6.2. Instabilities between two bulk fluids in the presence of hair tension . . . . .	107
6.2.1. Presentation of the problem . . . . .	107
6.2.2. Rayleigh–Taylor instability . . . . .	109
6.2.3. Kelvin–Helmholtz instability . . . . .	110
6.2.4. The general case . . . . .	112
6.3. Interest of the microgravity in the presence of capillarity: influence of gravity on the structure and dynamics of the foam . . . . .	114
6.4. Influence of gravity on flames . . . . .	118

6.5. Conclusion . . . . .	121
6.6. References . . . . .	122
<b>Chapter 7. Fire–Air: A Story of the Flame . . . . .</b>	<b>125</b>
Roger PRUD'HOMME, Mahouton Norbert HOUNKONNOU and Guillaume LEGROS	
7.1. Introduction . . . . .	125
7.2. The phlogiston theory . . . . .	127
7.3. The discovery of “air to fire” . . . . .	129
7.3.1. Oxygen . . . . .	130
7.4. From Lavoisier to Mendeleev . . . . .	132
7.4.1. Thermodynamics . . . . .	136
7.4.2. Mechanics . . . . .	137
7.5. Conclusion . . . . .	138
7.6. References . . . . .	138
<b>Chapter 8. Modelization of Partial Wetting by Macroscopic Approach in Discrete Mechanics . . . . .</b>	<b>141</b>
Jean-Paul CALTAGIRONE and Roger PRUD'HOMME	
8.1. Introduction . . . . .	141
8.2. Framework of discrete mechanics . . . . .	143
8.2.1. Maxwell's local frame of reference . . . . .	143
8.2.2. Equivalence of conservation of acceleration and energy . . . . .	146
8.2.3. Discrete law of motion . . . . .	148
8.3. Concepts of capillary motion . . . . .	150
8.3.1. Capillary motion law . . . . .	150
8.3.2. Modelization of partial wetting . . . . .	153
8.4. Analyses of some capillary flows . . . . .	156
8.4.1. Spreading and equilibrium of a drop . . . . .	156
8.4.2. Capillary rise between two vertical planes . . . . .	159
8.5. Conclusions . . . . .	161
8.6. References . . . . .	162
<b>Chapter 9. Numerical Simulation of an Average Flow in an Inter-Blade Channel of a Horizontal Axis Wind Mill . . . . .</b>	<b>165</b>
Delphin TOMBORAVO, Roger VONY, Francis RAVELOSON and Tsialefity ALY SAANDY	
9.1. Introduction . . . . .	165
9.2. Mathematical fluid motion modeling . . . . .	166
9.2.1. Simplifying assumptions . . . . .	166
9.2.2. Writing equations of motion in a moving coordinate system (E) . . . . .	167

---

9.3. Definition of average flow . . . . .	169
9.3.1. Definitions of the averages used. . . . .	170
9.4. Writing the equations of motion of a mean flow in an inter-blade channel . . . . .	172
9.4.1. Expressions of the equations of motion of the mean flows on the hub and on the crankcase . . . . .	175
9.4.2. Expressions of the equations of motion of the mean flows on the upper surface and on the lower surface. . . . .	179
9.4.3. Expressions of the equations of motion of flows on the corners . . . . .	184
9.5. Calculating the drive torque of the wheel of a wind turbine . . . . .	186
9.6. Different power expression and efficiency calculation . . . . .	190
9.6.1. Available power. . . . .	190
9.6.2. Starting power. . . . .	190
9.6.3. Mechanical power . . . . .	190
9.6.4. Performance . . . . .	190
9.7. Numerical resolution method used . . . . .	191
9.7.1. Mesh . . . . .	191
9.7.2. Discretization scheme . . . . .	191
9.7.3. Spatial discretization scheme . . . . .	191
9.7.4. Synthesis. . . . .	192
9.8. Application of the method . . . . .	195
9.8.1. System description . . . . .	195
9.8.2. Calculation process . . . . .	197
9.9. Results and interpretation . . . . .	198
9.9.1. Initial flow velocity within the inter-blade channel . . . . .	198
9.9.2. Convergence of calculations based on NCO . . . . .	198
9.9.3. Performances . . . . .	199
9.9.4. Interpretation of the results obtained . . . . .	201
9.10. Conclusion and perspective . . . . .	201
9.11. References . . . . .	202
<b>Chapter 10. Circulation in the Vessels of the Human Body . . . . .</b>	<b>205</b>
Roger PRUD'HOMME, François BOUSTANI and Stéphane VINCENT	
10.1. Introduction . . . . .	207
10.2. Blood circulation . . . . .	207
10.2.1. A brief history of blood circulation . . . . .	207
10.3. The heart, engine of movement . . . . .	211
10.3.1. Cardiac muscle. . . . .	211
10.3.2. Nodal tissue . . . . .	211
10.3.3. Coronaries . . . . .	212

10.3.4. The cardiac cycle: details on diastoles and systoles . . . . .	213
10.3.5. The electrocardiogram . . . . .	214
10.4. The fluids . . . . .	215
10.4.1. Blood . . . . .	215
10.4.2. Other fluids . . . . .	217
10.5. Blood vessels . . . . .	217
10.5.1. Arteries and veins . . . . .	218
10.5.2. Capillary vessels . . . . .	219
10.6. Fluid mechanics and the human body . . . . .	221
10.6.1. Basic equations . . . . .	222
10.6.2. Bernoulli's equations . . . . .	222
10.6.3. The one-dimensional approximation . . . . .	224
10.6.4. Viscous fluid problems . . . . .	225
10.6.5. Multiphase fluids . . . . .	228
10.6.6. Recent developments, viscoelastic fluids . . . . .	229
10.7. Resolutions . . . . .	230
10.8. Conclusion . . . . .	231
10.9. Acknowledgements . . . . .	231
10.10. References . . . . .	231
 <b>Chapter 11. Series Solutions to Boundary Value Problems for Reaction–Diffusion Equations on Finite Intervals: Application to Stefan Problems</b> . . . . .	235
Edoh TOSSOU, Kwassi ANANI and Roger PRUD'HOMME	
11.1. Introduction . . . . .	235
11.2. The reaction–diffusion equation . . . . .	236
11.3. The Fourier decomposition method . . . . .	237
11.3.1. Homogeneous equation and boundary conditions . . . . .	237
11.3.2. Non-homogeneous problem and auxiliary functions . . . . .	241
11.4. Applications . . . . .	246
11.4.1. Practical implementation of the method . . . . .	246
11.4.2. A two-sided contracting Stefan problem . . . . .	247
11.5. Conclusion . . . . .	250
11.6. References . . . . .	250
 <b>List of Authors</b> . . . . .	253
 <b>Index</b> . . . . .	255
