Preface	xiii
Frédérique ROLANDONE	
Introduction: A Kinematic Approach to the Seismic Cycle	xv
Marianne MÉTOIS	
Chapter 1. Determining the Main Characteristics of Earthquakes from Seismological Data	1
Martin VALLÉE	
1.1. Introduction.	1
1.2. Observation of the elastic waves generated by earthquakes	2
1.2.1. Observations on a global scale	2
1.2.2. Data recorded at the regional and local scales	7
1.3. Modeling elastic waves generated by an earthquake.	7
1.3.1. Simplified representations of the seismic source	8
1.3.2. Modeling body waves in the far field and at large distances: application to seismic ruptures with horizontal propagation.	14
1.3.3. Empirical Green's function	20
1.3.4. Complete modeling of the elastic wave field.	21
1.4. Approaches used to determine the global characteristics of the seismic source	23

1.4.1. Methods based on the analysis of long-period waves at far distances	23
1.4.2. Methods based on the broadband analysis of teleseismic body waves	25
1.4.3. Methods based on full wavefield modeling at local or regional distances	31
1.5. Conclusion	33
1.6. References	33
Chapter 2. Co-Seismic Phase: Imaging the Seismic Rupture	39
Zacharie DUPUTEL	
2.1. Introduction.	39
2.2. Surface observations	41
2.2.1. Seismological data	41
2.2.2. GNSS data: from geodesy to seismo-geodesy	44
2.2.3. Satellite and aerial imaging	47
2.2.4. Tsunami data.	48
2.3. The forward problem	49
2.3.1. The static case: modeling geodetic data.	51
2.3.2. The kinematic case: modeling seismological data and high-frequency GNSS data.	52
2.3.3. Computing the Green's functions	55
2.4. The inverse problem	58
2.4.1. Tikhonov regularization approach	59
2.4.2. Bayesian approach	60
2.4.3. Modeling data in the frequency domain or as wavelets.	64
2.5. Characterization of the source and implications on the physics of earthquakes	65
2.6. Conclusion	71
2.7. References	72
Chapter 3. The Post-seismic Phase: Geodetic Observations and Mechanisms	79
Frédérique ROLANDONE	
3.1. The initial observations of the post-seismic deformation	79
3.2. Using spatial geodesy for imaging post-seismic deformation	83

3.2.1. Post-seismic phenomena of the Sanriku-Haruka-Oki earthquake	84
3.2.2. Post-seismic phenomena of the Landers earthquake	85
3.2.3. Post-seismic phenomena of the Hector Mine earthquake.	87
3.2.4. Post-seismic phenomena of the Parkfield earthquake.	89
3.3. Post-seismic deformation processes and the mechanical behavior of the lithosphere	91
3.3.1. Poroelastic deformation and fluid circulation	92
3.3.2. Afterslip and frictional properties of faults	93
3.3.3. Viscoelastic relaxation and upper mantle viscosity	94
3.4. Conclusions: the importance of post-seismic deformation in the seismic cycle balance	96
3.5. References	98

Chapter 4. Friction Laws and Numerical Modeling of the Seismic Cycle 101

Marion THOMAS and Harsha BHAT

4.1. Friction laws	101
4.1.1. Historical notions about friction	101
4.1.2. From static friction to dynamic friction	102
4.1.3. Slip weakening friction law	104
4.1.4. Rate weakening friction law.	106
4.1.5. Rate-and-state type friction law.	106
4.2. Modeling fault behavior: the “spring-block slider” model	110
4.2.1. Modeling the slip on a fault: creep or earthquake	110
4.2.2. Modeling the seismic cycle	113
4.3. A more complex physical reality	116
4.3.1. Spatial and temporal variability in the slip mode on faults.	116
4.3.2. Additional mechanisms that can come into play during earthquakes	117
4.3.3. Going beyond the elastic Earth model.	122
4.4. Transition toward a new generation of models	122
4.5. References	123

Chapter 5. The Seismic Cycle of the Chilean Subduction: Mega-earthquakes, Seismic Gap and Coupling 129

Christophe VIGNY and Emilie KLEIN

5.1. The seismo-tectonic context	129
5.2. The seismic gap theory applied to Chile	131

5.3. Coupling/seismicity correspondence	133
5.4. Evaluation of the current seismic hazard in Chile	136
5.4.1. From the hazards to the risk	136
5.4.2. “Standard” subduction earthquakes along the Chilean segments from North to South	137
5.4.3. “Deep” subduction earthquakes	138
5.4.4. Intra-plate earthquake	139
5.5. Giant earthquakes and the super-cycle	139
5.6. References	145
Chapter 6. The Mexican Subduction Seismic Cycle: Highlighting the Key Role Played by Transient Deformations.	149
Mathilde RADIGUET	
6.1. The geo-dynamic context of the region	150
6.1.1. Convergence of plates and geometry of the subduction	150
6.1.2. Seismicity	151
6.2. Observation of the seismic cycle: the evolution of networks and the history of discoveries	153
6.3. Characterization of major slow earthquakes and the relationship with coupling	156
6.3.1. Characteristics and location of SSEs.	156
6.3.2. Connection to plate coupling	158
6.4. Seismic activity	159
6.4.1. The different signal types identified	159
6.4.2. Global characteristics of tremors in the subduction zone.	159
6.4.3. Relations between tremor activity, LFEs and SSEs	162
6.4.4. Characterization of small SSEs: joint seismo-geodetic analyses	163
6.5. Interactions between seismic and aseismic slips in Mexico	163
6.5.1. Slow slip events preceding major earthquakes	164
6.5.2. SSE and post-seismic slip	166
6.5.3. Sensitivity of aseismic slips to seismic waves	166
6.6. Conclusion	166
6.7. References	167
Chapter 7. Forearc Topography: Mirror of Megathrust Rupture Properties	173
Nadaya CUBAS	
7.1. Introduction.	173

7.2. Mechanical analysis: the critical taper theory.	174
7.3. Application to subduction forearcs	176
7.3.1. Relations between seismic behavior and frictional properties . . .	176
7.3.2. Relations between seismic behavior and critical state	177
7.3.3. Impact on the trench-coast distance	177
7.4. Splay faults: transition faults.	178
7.5. Deformation of accretionary prisms: evidence for rupture propagating up to the trench.	180
7.6. Conclusion	183
7.7. References	185
Chapter 8. The Diking Cycle at Divergent Plate Boundaries.	189
Cécile DOUBRE	
8.1. Introduction.	189
8.2. Boundaries of diverging plates	190
8.3. Magmato-tectonic interactions in rift zones.	193
8.4. The diking cycle	195
8.4.1. The co-diking phase	196
8.4.2. The post-diking phase	204
8.4.3. The inter-diking phase	206
8.5. Conclusion	210
8.6. References	212
Chapter 9. Interactions Between Tectonic Deformation and Erosion During the Seismic Cycle in Mountain Ranges	217
Philippe STEER	
9.1. Introduction.	217
9.2. The paradigm of steady-state landscapes	219
9.3. Earthquakes and co-seismic landslides.	221
9.4. Landslide size distributions	224
9.5. Post-seismic relaxation of landscapes	227
9.6. Discussions: topographic budget of earthquakes and the seismic cycle	232
9.7. Prospects: impact of erosion on fault and earthquake dynamics.	235
9.8. References	237

Chapter 10. Cumulative Deformation, Long-term Slip-rate and Seismic Cycle of Intra-continental Strike-slip Faults.	245
Jérôme VAN DER WOERD	
10.1. Introduction	245
10.2. From geomorphological offsets to fault slip-rate	247
10.2.1. Tectonic offset of rivers	247
10.2.2. Average slip-rate determination from alluvial terrace edges (risers)	249
10.3. Variation in space and time of the long-term fault slip-rate.	253
10.4. Characteristic slip, earthquake size and seismic cycle	257
10.4.1. Earthquake and cumulative offset: the Kunlun fault and Kokoxili earthquake.	257
10.4.2. Characteristic repetition of ruptures and earthquakes	261
10.5. Conclusion	263
10.6. References.	263
Chapter 11. Paleoseismology.	267
Yann KLINGER	
11.1. Introduction	267
11.2. Paleoseismology for faults in a continental context	269
11.2.1. Paleoseismological trenches	269
11.2.2. Fault escarpments in the context of limestone	274
11.2.3. Paleoseismology and satellite imagery.	275
11.3. Paleoseismology for faults in a marine context	276
11.3.1. Subduction and vertical movements	277
11.3.2. Turbidite record of earthquakes	280
11.4. Indirect effects of earthquakes and paleo-seismicity	281
11.5. References.	284
Chapter 12. Analog Modeling of the Seismic Cycle and Earthquake Dynamics	287
Stéphane DOMINGUEZ	
12.1. Introduction	287
12.2. Principle and methodology	288
12.3. Experimental results	290
12.3.1. Modeling the different phases of the seismic cycle	290
12.3.2. Slip kinematics and the role of the boundary conditions	295
12.4. References.	298

Conclusion: How Ideas Evolve from a Continual Confrontation Between Observations and Models	301
Cécile LASSERRE	
List of Authors	309
Index	311
