Preface	ix
Introduction	xiii
Chapter 1. Bipolar Junction Transistor	1
1.1. Introduction.	1
1.1.1. A schematic technological embodiment of an integrated bipolar junction transistor	2
1.2. Transistor effect	4
1.2.1. Flows and currents	5
1.2.2. Compromises for bipolar junction transistor	6
1.2.3. Configurations and associated current gains	7
1.3. Bipolar junction transistor: some calculations	9
1.3.1. Various modes of operation.	15
1.4. The NPN transistor; Ebers–Moll model (1954: Jewell James Ebers and John L. Moll).	16
1.4.1. Gummel curves	18
1.4.2. Consideration of second-order effects for the static model	19
1.4.3. Early curves	20
1.4.4. Base width modulation; Early effect.	20
1.4.5. Ebers–Moll model wide signals	22
1.4.6. Current gain	26

1.5. Simple bipolar junction transistor model	27
1.6. Network of static characteristics of the bipolar junction transistor . . .	27
1.6.1. Common emitter configuration	31
1.6.2. Common emitter configuration with emitter degeneration.	34
1.7. Some applications	35
1.7.1. Current mirrors	35
1.7.2. Differential pair	38
1.7.3. Output stage	41
1.8. Application: operational amplifier	43
1.9. BiCMOS	43
Chapter 2. MOSFET	45
2.1. Introduction.	45
2.1.1. Base structure	45
2.1.2. Working principle	46
2.2. MOS capability: electric model and curve $C(V)$	47
2.3. Different types of MOS transistors	49
2.4. A CMOS technological process.	50
2.5. Electric modeling of the NMOS enhancement transistor	52
2.6. Off state	52
2.7. Linear or ohmic or unsaturated regime.	52
2.7.1. Saturation regime	53
2.7.2. High saturation velocity	53
2.7.3. Static characteristics	54
2.8. Applications	56
2.8.1. Digital inverter	56
2.8.2. Active resistor.	58
2.8.3. MOS Single current mirror	59
2.8.4. MOS differential amplifier	60
2.9. Explained technological steps of a CMOS	60
Chapter 3. Devices Dedicated to Radio Frequency: Toward Nanoelectronics	75
3.1. Introduction.	75
3.2. Model for HBT SiGeC and device structure	76
3.2.1. Modeling the drift–diffusion equation.	76
3.3. MOS of the future?	83
3.3.1. Introduction	83
3.3.2. DGMOS	84
3.3.3. Transport in nanoscale MOSFETs	85

3.3.4. Numerical methods	87
3.4. Conclusion	111
3.5. MATLAB use	112
3.5.1. Computer-aided modelling and simulations: synopsis	112
3.5.2. Calculation of the second elementary member ρ^1	139
3.6. Conclusion	185
Appendix	187
References	211
Index	213
