
Contents

Introduction	xv
 Chapter 1. Material Strength.	1
1.1. Compression and traction	3
1.2. Pure flexion.	5
1.3. Shear strain	7
1.4. Torsion	8
1.4.1. Circular section	9
1.4.2. Applying this to a circle	9
1.4.3. Rectangular section.	9
1.5. Spherical shell theory	10
1.6. Cylindrical shell theory.	12
 Chapter 2. Concrete	15
2.1. Overview	15
2.2. The composition of the concrete	21
2.2.1. Cement	21
2.2.2. Aggregates.	21
2.2.3. Mixing water	22
2.2.4. Adjuvants	22
2.2.5. The mechanical characteristics of concrete.	23

Chapter 3. Ministerial Guidelines of October 20, 1906, on the Use of Reinforced Concrete	27
3.1. Overview	27
3.2. Calculation bases: requirements.	28
3.2.1. Basic requirements	28
3.2.2. Project usage duration	28
3.2.3. Thermal effects	29
3.2.4. Settlements and differential movements	29
3.2.5. Material properties	29
3.3. Materials	29
3.3.1. Concrete	29
3.3.2. Reinforced concrete steels.	31
3.4. Durability and cover of reinforcements	32
3.4.1. Overview.	32
3.4.2. Durability requirement.	33
3.4.3. Cover	33
3.5. Structural analysis	34
3.5.1. Overview.	34
3.5.2. Loads cases and combinations	34
3.5.3. Second-order effects	34
3.5.4. Modeling the structure.	34
3.6. Calculating the structures.	35
3.6.1. Simple compression	35
3.6.2. Compression with bending	35
3.6.3. Bending.	36
3.6.4. Buckling	37
3.6.5. Design	38
3.7. Constructive provisions.	41
3.7.1. Pouring concrete	42
3.7.2. Distance between reinforcements and between reinforcements and formwork	42
3.7.3. Construction joints of concrete	42
3.7.4. Curing of the concrete	42
 Chapter 4. The January 1913 Technical Note on the Calculation of Reinforced Concrete Works	 45
4.1. Overview	45
4.2. Calculation bases	45
4.3. Materials	46
4.3.1. Concrete	46
4.3.2. Reinforced concrete steels.	46

4.4. Durability and cover of reinforcements	47
4.5. Structural analysis	47
4.6. Calculation of the structures	47
4.6.1. Simple compression	47
4.6.2. Bending.	48
4.7. Examples of finished structures	52
4.7.1. 1927 tank.	52
4.7.2. 1928 tanks	57
4.7.3. The “Pauchot reinforced stone”	71
4.7.4. Hangar for two airships in Luçon (Vendée, France)	73

Chapter 5. The Ministerial Guidelines of July 19, 1934 on the Use of Reinforced Concrete	75
5.1. Overview	75
5.2. Calculation bases: requirements.	77
5.2.1. Basic requirements	77
5.2.2. Project usage duration	77
5.2.3. Thermal effects	77
5.2.4. Settlements and differential movements	77
5.2.5. Material properties	77
5.3. Materials	78
5.3.1. Concrete	78
5.3.2. Reinforced concrete steel	79
5.4. Durability and cover of reinforcements	81
5.4.1. Overview.	81
5.4.2. Durability	81
5.4.3. Cover	81
5.5. Structural analysis	82
5.5.1. Overview.	82
5.5.2. Load combinations	82
5.5.3. Second-order effects	82
5.5.4. Structural modeling.	83
5.6. Structural calculations	83
5.6.1. Simple compression	83
5.6.2. Compression with bending	83
5.6.3. Bending.	84
5.6.4. Buckling	84
5.6.5. Example of simple compression calculation	85
5.7. Constructive provisions.	86
5.7.1. Concrete pouring	86

5.7.2. Distance between reinforcements and between reinforcements and the formwork	87
5.7.3. Construction joints treatment	87
5.7.4. Note No. 1: Appendix II.	87
5.7.5. Note No. 2: Regulation on reinforced concrete constructions (emanating from the Trade Union Chamber in January 1930)	88
5.8. Comments.	91
5.8.1. General comments	91
5.8.2. Comparison between the 1906 and 1934 regulations	93
5.8.3. Practical data	96
5.8.4. Examples of the Boussiron hangars	97
 Chapter 6. BA 45 Regulations.	 107
6.1. Overview	107
6.2. Calculation bases: requirements.	108
6.2.1. Basic requirements	108
6.2.2. Project usage duration	108
6.2.3. Thermal effects	108
6.2.4. Differential settlements and movements	108
6.3. Materials	109
6.3.1. Concrete	109
6.3.2. Reinforced concrete steels.	110
6.4. Durability and cover of reinforcements	111
6.4.1. Overview.	111
6.4.2. Durability	112
6.4.3. Cover	112
6.5. Structural analysis	112
6.5.1. Overview.	112
6.5.2. Load combinations	112
6.5.3. Second-order effects	113
6.5.4. Modeling the structure.	113
6.6. Structural calculations	113
6.6.1. Simple compression	113
6.6.2. Compression with bending	114
6.6.3. Bending.	115
6.6.4. Buckling	119
6.7. Constructive provisions.	120
6.7.1. Pouring concrete	120
6.7.2. Distance between reinforcements and between reinforcements and the formwork	120
6.7.3. Construction joint treatment	121

6.7.4. Concrete curing	121
6.7.5. Concrete inspection tests	121
6.8. Application to the calculation of circular tanks	121
6.8.1. Calculation of the main reinforcements	121
6.8.2. Calculating the distribution reinforcement	123
6.8.3. Calculation of concrete wall thicknesses	123
6.8.4. Cover dome study	125
6.8.5. Vertical wall study	127
6.8.6. Truncated cone study	128
6.8.7. Bottom dome study	130
6.9. Practical considerations on tank design according to the 1945 regulations	133
6.9.1. Tank compartmentalization	133
6.9.2. The tank cover	134
6.9.3. The external vertical walls of the tank	134
6.9.4. The interior vertical walls of the tank	134
6.9.5. Bottom dome	134
6.9.6. Tank support	135
6.9.7. General recommendations	136
6.10. Practical considerations on the design of silos according to the 1945 regulations	137
6.10.1. Overview	137
6.10.2. Formulas determined by the 1943 commission	139
6.10.3. Overpressure in cells during emptying	142
6.10.4. Example of calculating the size of a square cell in reinforced concrete according to the previous formulas	144
Chapter 7. BA 60 Regulations (Modified in 1964)	147
7.1. Overview	147
7.2. Calculation bases: requirements	148
7.2.1. Basic requirements	148
7.2.2. Project usage duration	148
7.2.3. Thermal effects	148
7.2.4. Shrinking and differential movements	149
7.3. Materials	149
7.3.1. Concrete	149
7.3.2. Reinforced concrete steels	152
7.4. Durability and cover of reinforcements	154
7.4.1. Overview	154
7.4.2. Durability requirement	154
7.4.3. Cover	155

7.5. Structural analysis	155
7.5.1. Overview	155
7.5.2. Load combinations	155
7.5.3. Second-order effects	156
7.5.4. Structural modeling.	156
7.6. Structural calculations	156
7.6.1. Compression simple	156
7.6.2. Bending–compression with bending.	156
7.6.3. Tensile strength	159
7.6.4. Buckling	159
7.6.5. Punching shear	161
7.6.6. Torsion	162
7.7. Constructive provisions.	165
7.7.1. Concrete pouring	165
7.7.2. Distance between reinforcements and between reinforcements and formwork	165
7.7.3. Concrete joints	165
7.7.4. Concrete setting.	165
7.7.5. Concrete control tests	165
7.7.6. Constructive arrangements of the reinforcements	166
7.8. Application to tank calculation	169
7.8.1. Flat wall tanks.	169
7.8.2. Circular tanks	171
7.9. 1964 Amendment (circular no. 70 of November 14, 1964).	174
7.10. Tanks: 1966 CSNCCABP specifications.	176
7.10.1. Classification of structures – waterproofing criterion	176
7.10.2. Concrete composition and exposure class.	176
7.10.3. Note on the justification of the tanks with BA 60	177
7.10.4. Minimum constructive provisions	178
7.11. Comparison between booklet 61 and the BA 60 regulations	179
 Chapter 8. CCBA 68.	 183
8.1. Overview	183
8.2. Calculation bases: requirements.	184
8.2.1. Basic requirements	184
8.2.2. Project duration	185
8.2.3. Thermal effects	185
8.2.4. Settlement and differential movements	185
8.2.5. Material properties	185

8.3. Materials	186
8.3.1. Concrete	186
8.3.2. Reinforced concrete steels.	189
8.4. Durability and cover of reinforcements	192
8.4.1. Overview.	192
8.4.2. Durability requirement.	192
8.4.3. Cover	192
8.5. Structural analysis	192
8.5.1. Overview.	192
8.5.2. Load combinations	193
8.5.3. Second-order effects	195
8.5.4. Structural modeling.	195
8.6. Calculation of structures	195
8.6.1. Simple compression	195
8.6.2. Bending–compression with bending.	197
8.6.3. Traction.	199
8.6.4. Punching stress	199
8.6.5. Buckling	200
8.7. Constructive provisions.	201
8.7.1. Concrete pouring	201
8.7.2. Distance between reinforcements and between reinforcements and formwork	201
8.7.3. Concrete joint	202
8.7.4. Concrete setting.	202
8.8. Comparison between the 1960 regulation (revised in 1964) and that of 1968 (revised in 1970)	202
8.9. Example of calculating an underground tank	204
8.9.1. Full tank	207
8.9.2. Empty tank.	208
8.10. Earthquake Regulations of 1969.	209
8.10.1. Overview	209
8.10.2. Principles of seismic design.	211
8.10.3. Special regulations for reinforced concrete structures.	212
8.10.4. Calculation method of reinforced concrete structures.	212
8.10.5. Structural calculation methods	214
8.11. Special cases of silos	220
8.11.1. Overview	220
8.11.2. Determining actions on the vertical walls and the bottom of a silo	223
8.11.3. Determining nominal actions on the vertical walls and the bottom of a silo with normal emptying	224

8.11.4. Determining nominal actions on the vertical walls and the bottom of a silo with abnormal emptying.	225
8.11.5. Special requirements for reinforced concrete structures	229
8.11.6. Example: determining the dimensions of a reinforced concrete silo	232

Chapter 9. BAEI 80 Regulations. 237

9.1. Overview	237
9.2. Calculation bases: requirements.	240
9.2.1. Basic requirements	240
9.2.2. Project service life	241
9.2.3. Thermal effects	241
9.2.4. Differential settlements	242
9.2.5. Material properties	242
9.3. Materials	243
9.3.1. Concrete	243
9.3.2. Reinforced concrete steels.	244
9.4. Durability and cover of reinforcements	247
9.4.1. Overview.	247
9.4.2. Durability requirements	247
9.4.3. Cover	248
9.5. Structural analysis	249
9.5.1. Overview.	249
9.5.2. Load combinations	249
9.5.3. Second-order effects	251
9.5.4. Modeling the structure	252
9.6. Structural calculations	252
9.6.1. Simple compression	252
9.6.2. Compression with flexion	253
9.6.3. Bending.	254
9.6.4. Buckling	258
9.6.5. Justifications for tangent stresses.	258
9.7. Constructive provisions.	260
9.7.1. Pouring concrete	260
9.7.2. Distance between reinforcements and between reinforcements and formwork	260
9.7.3. Concrete recovery	261
9.7.4. Vacuum thrust.	261
9.7.5. Special provisions of compressed elements	261
9.7.6. Slabs on continuous supports	262

9.8. Special case of tanks: booklet 74 of 1983	263
9.8.1. Classification of structures in terms of waterproofing	263
9.8.2. Constructive provisions	264
9.8.3. Loads	264
9.9. Special case of tanks: booklet 74 of 1998	266
9.9.1. Classification of structures in terms of waterproofing	266
9.9.2. Constructive provisions	268
9.9.3. Requirements for slabs and tank undersides resting directly on the ground	268
9.9.4. Special provisions for domes	269
9.9.5. Loads	269
9.9.6. Specific provisions	270
9.10. Special case of silos: professional regulations of 1986	271
9.10.1. Load combinations	271
9.10.2. Section supporting calculations	272
9.10.3. Storage warehouses and tank silos	273
9.11. The 1969 earthquake regulations revised in 1982	275
9.12. The 1991 amendments to the BAEL 1983 regulations.	276
9.13. The 1995 amendments to the PS regulations	284
9.13.1. Provisions common to beams and posts	290
9.13.2. Specific provisions for bent elements	290
9.13.3. Specific provisions for compressed elements.	291
9.13.4. Knot-specific provisions	292
9.13.5. Specific provisions for walls	292
9.13.6. Specific arrangements for the slabs and diaphragms	293
9.13.7. Behavioral coefficient	293
9.13.8. Safety check	295
 Chapter 10. European, American and Russian Normative Codes	 297
10.1. European codes (Eurocodes).	297
10.1.1. Overview	297
10.1.2. Eurocodes calculation bases	298
10.1.3. Structural analysis.	303
10.1.4. Mastering cracking	304
10.2. The American Code ACI 318 M-19.	305
10.2.1. Overview	305
10.2.2. Calculation requirements.	306
10.2.3. Materials	307
10.2.4. Durability and cover of reinforcements	308
10.2.5. Structural analysis.	313

10.2.6. Structural calculations	315
10.2.7. Constructive provisions	321
10.3. The Russian standard SP63.13330.2018	324
10.3.1. Overview	324
10.3.2. Calculation bases	324
10.3.3. Requirements	325
10.3.4. Project life time	326
10.3.5. Thermal effects	326
10.3.6. Settlements and differential movements.	326
10.3.7. Materials	326
10.3.8. Durability and concrete cover.	329
10.3.9. Structural analysis.	331
10.3.10. Structural calculations	334
10.3.11. Constructive provisions: standard SP70.13330.2012	338
Appendices	341
Appendix 1. Characteristics of the Steel Used in the Different Regulations.	343
Appendix 2. Characteristics of Concrete Used in the Various Regulations	347
Appendix 3. Example of Calculations According to the Different Regulations.	349
