<b>Foreword</b> . . . . .	ix
<b>Introduction</b> . . . . .	xiii
<b>Chapter 1. The Environmental Impact of the Contemporary Economic Model</b> . . . . .	1
1.1. The negative effects of the economic model on the environment . . . . .	2
1.1.1. Disasters of economic activity accelerated by the First Industrial Revolution . . . . .	2
1.1.2. Questions about the capitalist system . . . . .	5
1.2. A society that pollutes . . . . .	7
1.2.1. Waste: elements of definition . . . . .	8
1.2.2. Pollution in the world: an inevitable growth? . . . . .	10
1.2.3. Public policies to reduce pollution . . . . .	17
1.3. A sustainable economic model? . . . . .	22
1.3.1. The sustainability approach . . . . .	23
1.3.2. Ecological footprint . . . . .	25
1.4. Conclusion . . . . .	27
<b>Chapter 2. Eco-design: Definitions and Theoretical Outlines</b> . . . . .	29
2.1. Eco-design: a plural concept . . . . .	30
2.1.1. The pioneers of eco-design . . . . .	30
2.1.2. Technocentric eco-design . . . . .	31
2.1.3. Sustainable design . . . . .	40

2.2. Technocentric eco-design: a dominant approach . . . . .	44
2.2.1. The diversity of available methods. . . . .	46
2.2.2. The most commonly used method: life cycle analysis . . . . .	46
2.2.3. Some examples of technocentric eco-design . . . . .	55
2.3. The contribution of eco-design to environmental innovations . . . . .	58
2.3.1. Innovation, environmental innovation and sustainable innovation . . . . .	58
2.3.2. The circular economy and the functional economy: practices that are sources of environmental innovations . . . . .	62
2.3.3. Frugal innovation: a form of sustainable design . . . . .	69
2.4. Conclusion . . . . .	70
<b>Chapter 3. Eco-design in Companies: Practices and Decisive Actions . . . . .</b>	<b>73</b>
3.1. A systemic approach to innovation . . . . .	74
3.1.1. Socio-technical systems . . . . .	75
3.1.2. Institutions . . . . .	77
3.2. Eco-design in socio-technical systems . . . . .	78
3.2.1. The elements of the system . . . . .	79
3.2.2. The relationships between the elements of the socio-technical systems . . . . .	88
3.2.3. Coordination by institutions . . . . .	93
3.3. Visible aspects of eco-design practices in socio-technical systems . . . . .	97
3.3.1. The economic results of companies: is it essential to “get” eco-design approaches accepted? . . . . .	97
3.3.2. Communication: a tool to support the diffusion of eco-design practices . . . . .	100
3.4. Conclusion . . . . .	104
<b>Chapter 4. Questions and Perspectives on Eco-design . . . . .</b>	<b>107</b>
4.1. Technocentric eco-design: an insufficient solution to the ecological transition . . . . .	108
4.1.1. The difficulty of leaving the dominant socio-technical regime . . . . .	108
4.1.2. Limitations due to eco-efficiency and the rebound effect . . . . .	113
4.2. The contribution of eco-design to the circular economy . . . . .	117

4.2.1. Circular economy business models and the diffusion of eco-design . . . . .	117
4.2.2. Technocentric eco-design and the circular economy: complementary approaches . . . . .	122
4.2.3. Circular economy business models and relationships between actors in socio-technical systems. . . . .	124
4.2.4. The limits of the circular economy . . . . .	125
4.3. The solutions enabled by sustainable design in the ecological transition perspective . . . . .	128
4.3.1. New possible uses for a new relationship between the human species and its environment . . . . .	128
4.3.2. The advantages of frugal innovation . . . . .	130
4.4. Perspectives . . . . .	131
4.4.1. Going further by involving stakeholders in innovation. . . . .	131
4.4.2. Considering the environment as a common good. . . . .	133
4.4.3. Profound changes are needed in the socio-technical systems . . . . .	134
4.5. Conclusion . . . . .	136
<b>Conclusion</b> . . . . .	139
<b>References</b> . . . . .	143
<b>Index</b> . . . . .	163
