Preface	ix
List of Abbreviations	xi
Introduction	xiii
Chapter 1. Statistical Experiments	1
1.1. Statistical experiments with linear regression	1
1.1.1. Basic definitions	1
1.1.2. Difference evolution equations	3
1.1.3. The equilibrium state	4
1.1.4. Stochastic difference equations	7
1.1.5. Convergence to the equilibrium state	9
1.1.6. Normal approximation of the stochastic component	11
1.2. Binary SEs with nonlinear regression	13
1.2.1. Basic assumptions	13
1.2.2. Equilibrium	15
1.2.3. Stochastic difference equations	17
1.2.4. Convergence to the equilibrium state	18
1.2.5. Normal approximation of the stochastic component	20
1.3. Multivariate statistical experiments	22
1.3.1. Regression function of increments	22
1.3.2. The equilibrium state of multivariate EPs	25
1.3.3. Stochastic difference equations	26

1.3.4. Convergence to the equilibrium state	28
1.3.5. Normal approximation of the stochastic component	29
1.4. SEs with Wright–Fisher normalization	31
1.4.1. Binary RFs	31
1.4.2. Multivariate RFIs	33
1.5. Exponential statistical experiments	35
1.5.1. Binary ESEs	36
1.5.2. Steady regime of ESEs	37
1.5.3. Approximation of ESEs by geometric Brownian motion	38
Chapter 2. Diffusion Approximation of Statistical Experiments in Discrete–Continuous Time	43
2.1. Binary DMPs	44
2.1.1. DMPs in discrete–continuous time	45
2.1.2. Justification of diffusion approximation	47
2.2. Multivariate DMPs in discrete–continuous time	51
2.2.1. Evolutionary DMPs in discrete–continuous time	52
2.2.2. SDEs for the DMP in discrete–continuous time	53
2.2.3. Diffusion approximation of DMPs in discrete–continuous time	55
2.3. A DMP in an MRE	58
2.3.1. Discrete and continuous MRE	58
2.3.2. Proof of limit theorems 2.3.1 and 2.3.2	62
2.4. The DMPs in a balanced MRE	65
2.4.1. Basic assumptions	66
2.4.2. Proof of limit theorem 2.4.1	70
2.5. Adapted SEs	74
2.5.1. Bernoulli approximation of the SE stochastic component	75
2.5.2. Adapted SEs	77
2.5.3. Adapted SEs in a series scheme	79
2.6. DMPs in an asymptotical diffusion environment	84
2.6.1. Asymptotic diffusion perturbation	85
2.7. A DMP with ASD	91
2.7.1. Asymptotically small diffusion	91
2.7.2. EGs of DMP	94
2.7.3. AF of DMPs	97

Chapter 3. Statistics of Statistical Experiments	103
3.1. Parameter estimation of one-dimensional stationary SEs	103
3.1.1. Stationarity	103
3.1.2. Covariance statistics	108
3.1.3. <i>A priori</i> statistics	110
3.1.4. Optimal estimating function	111
3.1.5. Stationary Gaussian SEs	114
3.2. Parameter estimators for multivariate stationary SEs	115
3.2.1. Vector difference SDEs and stationarity conditions	116
3.2.2. Optimal estimating function	118
3.2.3. Stationary Gaussian Markov SEs	119
3.3. Estimates of continuous process parameters	122
3.3.1. Diffusion-type processes	122
3.3.2. Estimation of a continuous parameter	123
3.4. Classification of EPs	124
3.4.1. Basic assumption	125
3.4.2. Classification of EPs	126
3.4.3. Justification of EP models classification	127
3.4.4. Proof of Theorem 3.4.1	129
3.4.5. Interpretation of EPs	133
3.4.6. Interpretation of EPs in models of collective behavior	138
3.5. Classification of SEs	139
3.5.1. The SA of SEs	139
3.5.2. Classifiers	140
3.5.3. Classification of SEs	142
3.6. Evolutionary model of ternary SEs	144
3.6.1. Basic assumptions	144
3.6.2. The model interpretation and analysis	146
3.7. Equilibrium states in the dynamics of ternary SEs	149
3.7.1. Building a model	149
3.7.2. The equilibrium state and fluctuations	150
3.7.3. Classification of TSEs	151
Chapter 4. Modeling and Numerical Analysis of Statistical Experiments	153
4.1. Numerical verification of generic model	153
4.1.1. Evolutionary processes with linear and nonlinear RFIs	153
4.1.2. Generic model of trajectory generation	156

4.2. Numerical verification of DMD	158
4.2.1. Simulation of DMD trajectories	158
4.2.2. Estimation of DMD parameters	163
4.3. DMD and modeling of the dynamics of macromolecules in biophysics	167
4.3.1. The model motivation	168
4.3.2. Statistical model of a stationary DMD	169
4.3.3. Stokes–Einstein kinetic diffusion model	171
4.3.4. Verification of the model of stationary DMD by direct numerical simulation	172
4.3.5. Numerical verification of DMD characteristics using the model of Stokes–Einstein	173
4.3.6. The ability of the DMD model to detect the proportion of fast and slow particles	176
4.3.7. Interpretation of the mixes of Brownian motions	182
References	189
