Preface	ix
Introduction	xiii
Chapter 1. Measurement Systems Using Polarized Light	1
1.1. Introduction	1
1.2. Matrix optics	2
1.3. Photon emission and detection	12
1.4. Application exercises on interferometry	16
1.4.1. Propagation of electromagnetic waves in a Fabry–Pérot cavity	18
1.4.2. Propagation of electromagnetic waves in a material	19
1.4.3. Interferometry and optical lambda meter	21
1.4.4. The homodyne interferometer and refractometer	34
1.4.5. The heterodyne interferometer	40
1.4.6. Application exercises on ellipsometry	51
1.5. Appendices	56
1.5.1. Conventions used for Jones vectors and Jones ABCD matrices	56
1.5.2. 2×2 transfer dies	59
1.5.3. 2×2 matrix multiplication	59
1.5.4. Trigonometric forms	60
1.5.5. Solution by MATLAB (exercises 1.4.3, 1.4.4 and 1.4.5)	61
1.6. Conclusion	66
Chapter 2. Quantum-scale Interaction	67
2.1. Introduction	67
2.2. The spin through the Dirac equation	69
2.2.1. Theoretical background	69
2.2.2. Application: the Dirac equation and Pauli matrices	74

2.3. The density matrix for a two-level laser system	105
2.3.1. Definition of the density matrix	106
2.3.2. Density matrix properties	110
2.3.3. Equation of motion of the density matrix.	113
2.3.4. Application to a two-level system	116
2.4. Ising's phenomenological model for cooperative effects	123
2.4.1. The Ising 1D model	124
Chapter 3. Quantum Optics and Quantum Computers	135
3.1. Introduction.	135
3.2. Polarized light in quantum mechanics	136
3.3. Introduction to quantum computers.	140
3.4. Preparing a qubit.	158
3.4.1. Application of the Bloch sphere	158
3.5. Application: interaction of a qubit with a classical field	172
3.5.1. Answer to question 1	173
3.5.2. Answer to question 2.	176
3.6. Applying Ramsey fringes to evaluate the duration of phase coherence	181
3.6.1. Answer to question 1	181
3.6.2. Answer to question 2.	183
Chapter 4. Reliability-based Design Optimization of Structures	185
4.1. Introduction.	185
4.2. Deterministic optimization.	186
4.3. Reliability analysis	187
4.3.1. Optimal conditions	189
4.4. Reliability-based design optimization	191
4.4.1. The objective function	192
4.4.2. Taking into account the total cost	192
4.4.3. Design variables	193
4.4.4. Response of a system by RBDO	193
4.4.5. Limit states.	194
4.4.6. Solving methods	194
4.5. Applications	194
4.5.1. Application on a bending beam.	194
4.5.2. Application on a circular plate with different thicknesses	196
4.5.3. Application: hook A	201
4.5.4. Application: optimization of the materials of an electronic board.	211

4.6. Reliability-based design optimization in nanotechnology	222
4.6.1. Thin-film SWCNT structures	222
4.6.2. Digital model of thin-film SWCNT structures	224
4.6.3. Numerical results	225
4.7. Conclusion	231
Appendix	233
References	237
