Foreword	ix
Pierre DROSSART	
Preface	xi
Chapter 1. IR Spectra in Space Observation	1
1.1. Introduction	1
1.2. Fourier transform spectroscopy	7
1.2.1. Principle of IR spectrum acquisition by interferometry	9
1.2.2. Design and operation of a long path difference interferometer	11
1.2.3. FTIR absorption spectroscopy in matrices	14
1.2.4. LIF and DR IR-IR spectroscopies in matrices	21
1.3. Resonant cavity laser absorption spectroscopy	26
1.3.1. Intracavity laser absorption spectroscopy (ICLAS)	30
1.3.2. Cavity ring-down spectroscopy (CRDS)	33
1.3.3. Frequency comb spectroscopy (FCS)	38
1.4. Spectroscopy for space observation	43
1.4.1. Spectroscopic ellipsometry for space observation	43
1.4.2. Space-borne spectroscopy	56
1.4.3. LIDAR spectroscopy for space observation	60
1.5. Conclusion	64
1.6. Appendices	64
1.6.1. Appendix 1: Measurement distortion and data processing	64
Chapter 2. Interactions Between a Molecule and Its Solid Environment	71
2.1. Introduction	72
2.2. Active molecule – solid environment system	74
2.2.1. Binary interaction energy	74

2.2.2. Dispersion–repulsion contribution	76
2.2.3. Electrostatic contribution	76
2.2.4. Induction contribution	78
2.3. Two-center expansion of the term $\left(\frac{1}{ \vec{r}_{ij_k} } \right)$	79
2.4. Conclusion	81
2.5. Appendices	82
2.5.1. Appendix 1: Multipole moments and dipole polarizability of a molecule with respect to its fixed reference frame $(G, \bar{X}, \bar{Y}, \bar{Z})$	82
2.5.2. Appendix 2: Elements of the rotational matrix	82
2.5.3. Appendix 3: Clebsch–Gordan coefficients	84
Chapter 3. Nanocage of Rare Gas Matrix	87
3.1. Introduction	87
3.2. Rare gases in solid state	88
3.3. Molecule inclusion and deformation of the doped crystal	90
3.3.1. Molecule inclusion	90
3.3.2. Deformation of the doped crystal	92
3.3.3. NH_3 in an argon matrix	95
3.3.4. Renormalization of the system’s Hamiltonian	96
3.4. Motions of NH_3 trapped in an argon matrix	97
3.4.1. Vibration–inversion mode ν_2	98
3.4.2. Orientational motion	100
3.4.3. Translational motion	106
3.4.4. Orientational motion–heat bath coupling	107
3.5. Infrared spectra	108
3.5.1. Infrared absorption coefficient	108
3.5.2. Bar spectrum	109
3.5.3. Spectral profile	112
3.6. Appendices	116
3.6.1. Appendix 1: Normal modes of vibrations of a Bravais lattice with face centered cubic (fcc) symmetry	116
3.6.2. Appendix 2: Adjustment of the weakly perturbed rotational potential energy on the basis of the rotation matrix elements	120
3.6.3. Appendix 3: Expansion coefficients of the coupling between the orientation of the molecule and lattice vibrations (phonons)	121
Chapter 4. Nanocages of Hydrate Clathrates	123
4.1. Introduction	123
4.2. The extended substitution model	124
4.3. Clathrate structures	129

4.4. Inclusion of a CH ₄ or NH ₃ molecule in a clathrate nanocage	131
4.4.1. Inclusion model	131
4.4.2. Interaction potential energy – equilibrium configuration	133
4.5. System Hamiltonian and separation of movements	136
4.6. Translational motion	139
4.6.1. CH ₄ – nanocages of the sI structure	140
4.6.2. NH ₃ – nanocages of the sI structure	141
4.7. Vibrational motions	142
4.7.1. CH ₄ – nanocages of the sI structure	143
4.7.2. NH ₃ – nanocages of the sI structure	144
4.8. Orientational motion	145
4.8.1. CH ₄ – nanocages of the sI structure	145
4.8.2. NH ₃ – nanocages of the sI structure	149
4.9. Bar spectra	157
4.9.1. Far infrared	157
4.9.2. Near infrared	159
4.10. Appendices	162
4.10.1. Appendix 1: Expressions of the orientational transition elements in the harmonic librators approximation	162
4.10.2. Appendix 2: Dipole moment as a function of dimensionless normal coordinates	164
Chapter 5. Fullerene Nanocage	169
5.1. Introduction	170
5.2. Ammonia molecule trapped in a fullerene C ₆₀ nanocage	171
5.2.1. Structure of the fullerene C ₆₀ nanocage	171
5.2.2. Inclusion of NH ₃ in a fullerene C ₆₀ nanocage	172
5.2.3. Interaction potential energy – equilibrium configuration	174
5.3. Potential energy surfaces – inertial model	176
5.3.1. Orientation–translational motion	176
5.3.2. Translational motion	178
5.3.3. Vibration–inversion–translational motion	179
5.3.4. Kinetic Lagrangian	179
5.4. Quantum treatment	182
5.4.1. Vibrational modes – frequency shifts	182
5.4.2. Vibration–inversion mode	183
5.4.3. Orientational motions	185
5.5. Bar spectra	187
5.5.1. Far infrared and microwaves	188
5.5.2. Near infrared	188

5.6. Appendices	190
5.6.1. Appendix 1: FORTRAN program	190
5.6.2. Appendix 2: Expressions of the components of the dipole moment vector and its derivatives with respect to the normal vibrational coordinates	211
Chapter 6. Adsorption on a Graphite Substrate	213
6.1. Introduction	213
6.2. “NH ₃ molecule–substrate” system interaction energy	214
6.2.1. Description of the system	214
6.2.2. “NH ₃ molecule–graphite substrate” interaction energy	216
6.3. Equilibrium configuration and potential energy surfaces	218
6.3.1. Adsorption energy	221
6.4. Hamiltonian of the system	221
6.4.1. Separation of movements	223
6.4.2. Renormalized Hamiltonians	224
6.4.3. Translational motions	224
6.4.4. Vibrational motions	225
6.4.5. Orientational motion	230
6.4.6. Orientational motion – heat bath dynamic coupling	235
6.5. Infrared spectra of the NH ₃ molecule adsorbed on the graphite substrate	235
6.5.1. Far-infrared spectrum	237
6.5.2. Near-infrared spectrum	240
6.6. Conclusion	246
6.7. Appendices	246
6.7.1. Appendix 1: FORTRAN program	246
6.7.2. Appendix 2: Expressions of the molecule orientation – heat bath phonons coupling terms	259
6.7.3. Appendix 3: Expressions of the components of the dipole moment vector and its derivatives with respect to the normal vibration coordinates	259
