Foreword	ix
Preface	xi
Acknowledgments	xv
Chapter 1. Principles and Genesis of Maritime Eco-design	1
1.1. Principles of maritime eco-design	2
1.2. Definition of eco-design of marine infrastructures	4
1.3. Japanese inspiration	8
1.3.1. Influence of the Japanese vision for sea-friendly development projects	8
1.3.2. The Japanese <i>Sato-umi</i>	10
1.3.3. Artificial marine habitats: Japanese origin of inspiration for eco-design.	11
1.4. Assessing the effects of a project on the environment: the impact study	12
1.4.1. Designing a better project for the environment.	14
1.4.2. Informing the administrative authority on the decision to be taken.	14
1.5. The “no net loss of biodiversity” objective: a regulatory obligation for developers, an opportunity for eco-design	17
1.6. Specificities of the environmental assessment related to the marine environment: the “natural” public maritime domain concept	19
1.6.1. The natural public maritime domain, an essential concept	19
1.6.2. Managing the marine environment: a necessarily integrated approach.	23
Chapter 2. Maritime Civil Engineering	27
2.1. General information	28
2.2. Typology of coastlines	30
2.2.1. Coastal classification and sea-level evolution	30
2.2.2. Sea-level fluctuations and coastline erosion	33

2.2.3. Rocky shores	35
2.2.4. Soft coastlines	36
2.2.5. Fine material shorelines	38
2.2.6. Coral bioconstructed coastlines and mangroves	39
2.2.7. Assessment	41
2.3. Coastal defense works	41
2.3.1. Main transverse structures: groins and jetties	42
2.3.2. Main longitudinal structures: breakwaters and upper beach structures	43
2.4. Port structures	47
2.4.1. Criteria for establishing a port	47
2.4.2. Geographical location	48
2.4.3. Economic criteria	49
2.4.4. Operating principles of ports	51
2.4.5. Typology of port structures	56
2.5. Design approach	59
2.5.1. The design methodology	59
2.5.2. Ocean data	62
2.5.3. Service actions	70
2.5.4. The usual design criteria	73
2.5.5. Geotechnical data	74
2.5.6. Data on construction materials	79
2.5.7. Synthesis	87
Chapter 3. Eco-design of Marine Infrastructures	89
3.1. The evolution of research work towards the eco-design of marine structures	90
3.2. The modernized approach to project management	96
3.2.1. Eco-design actors	101
3.2.2. Development and maturation of an eco-designed development project	103
3.3. The methodological approach to eco-design: responding to the expressed need	109
3.3.1. Eco-design, an adapted technical response for engineers and project managers	110
3.3.2. Eco-design as a lever for modernizing the execution of works	117
3.3.3. Monitoring, control, validation and satisfaction for the user and nature	121
3.4. Infrastructure as a new support for marine life	122
3.4.1. Biophysical data of the environment	123
3.4.2. Integration of the infrastructure into an ecosystem	130
3.4.3. Bio-inspiration and design of eco-designed structures	144

3.5. Eco-design at the material level: the example of concrete	144
3.5.1. A little history	144
3.5.2. Concrete, the state of the art	150
3.5.3. Concrete formulations	156
3.5.4. The integrative eco-design of the performance approach: perspectives.	159

Chapter 4. Evidence Through Experience: Examples of Eco-designed Marine Projects 163

4.1. Mayotte submarine pipeline: an initial eco-designed marine structure	167
4.2. Bio-inspiration and nature-based solutions for artificial reef design	177
4.2.1. The value of creating artificial habitats	178
4.2.2. The issue of fish habitat creation	179
4.3. The scope of port eco-design	183
4.3.1. The concept of port eco-design	183
4.3.2. Eco-design of the port of Guilvinec-Lechiagat.	185
4.3.3. Ecological structures designed as natural grass beds	186
4.3.4. “Calais Port 2015” port project	187
4.4. Eco-design for coastal protection.	191
4.4.1. Beneficial use of coastal sediment transport: the Sand Motor project	192
4.4.2. The experience of the EConcrete company	194
4.4.3. Landscape redevelopment of the East Darling Harbour waterfront in Sydney	196
4.4.4. CLI’s experience with concrete dike shells: the need for eco-design.	198
4.4.5. Eco-design of the Brest harbor breakwater	200
4.5. Biomimetic artificial reefs in Corsica (Ajaccio)	202
4.6. Artificial island eco-design	208
4.6.1. The Monegasque government’s vision for the Principality of Monaco’s offshore extension	208
4.6.2. The genesis of the eco-design of the Monegasque artificial peninsula project	214
4.7. Eco-design of mooring systems	216
4.7.1. Eco-design of moorings for recreational vessels in Guadeloupe	217
4.7.2. Eco-design of moorings for large vessels and yachts as a solution for the protection of the Mediterranean Posidonia meadow	225
4.8. Eco-design of offshore viaduct piles	232
4.9. Offshore wind farm project eco-design: multi-use perspectives.	236

Conclusion	239
