<b>Introduction</b> . . . . .	ix
<b>Chapter 1. Words Used to Describe the Atmosphere and Subtle Matter</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Air and the atmosphere . . . . .	3
1.3. Vapors and exhalations . . . . .	13
1.4. Coarse and subtle matters . . . . .	21
1.5. The triptych of heat, fire and light . . . . .	25
1.5.1. Heat . . . . .	25
1.5.2. Fire . . . . .	29
1.5.3. Light . . . . .	31
1.6. Ether . . . . .	35
1.7. Fundamental properties of air. . . . .	37
<b>Chapter 2. Refractive Matter</b> . . . . .	41
2.1. Introduction . . . . .	41
2.2. State of knowledge in the 17th century . . . . .	42
2.2.1. Representations of the atmosphere in the mid-17th century. . . . .	42
2.2.2. The atmosphere of mathematicians and refraction in the first half of the 17th century . . . . .	48
2.2.3. Gravity and elasticity of atmospheric matter in the second half of the 17th century . . . . .	50
2.3. Arguments for the introduction of a refractive matter other than air . . . . .	54
2.3.1. Argument based on invalidation by the observation of the theory of refraction by vapors and exhalations . . . . .	54
2.3.2. Argument based on the high values of horizontal refraction at high latitude . . . . .	58

2.3.3. Argument based on the too large value of the horizontal refraction predicted by the barometric model . . . . .	63
2.3.4. Argument based on the gap considered as too large between the refractive height and the heights determined by the other methods . . . . .	64
2.3.5. Argument based on the judgment that the sine law implies an absurd consequence on the path of light rays . . . . .	67
2.4. Discussion . . . . .	69
2.4.1. Observers and refractive matter . . . . .	70
2.4.2. Cartesians and refractive matter . . . . .	73
2.4.3. Mathematicians and refractive matter . . . . .	76
2.5. Conclusion . . . . .	78
<b>Chapter 3. Solar Matter.</b> . . . .	<b>81</b>
3.1. Introduction . . . . .	81
3.2. State of knowledge of the Sun in the 17th century . . . . .	82
3.2.1. Sunspots and rotation of the Sun on its axis . . . . .	82
3.2.2. Nature and origin of comets and their tails . . . . .	87
3.2.3. Zodiacal light and solar atmosphere. . . . .	95
3.2.4. The example of Hartsoeker's model merging sunspots, comets and zodiacal light in a single representation . . . . .	99
3.3. Solar matter and height of the atmosphere. . . . .	103
3.3.1. Solar atmosphere and effect on the duration of twilight . . . . .	104
3.3.2. Solar atmosphere and the Northern Lights . . . . .	106
3.4. Conclusion . . . . .	118
<b>Chapter 4. Magnetic Matter</b> . . . . .	<b>121</b>
4.1. Introduction . . . . .	121
4.2. Main concepts of magnetism in the 17th century . . . . .	121
4.2.1. Descartes's magnet theory and Gassendi's design . . . . .	121
4.2.2. Knowledge of magnetism at the turn of the 18th century . . . . .	129
4.3. The explanation of the aurora borealis by magnetic matter . . . . .	139
4.3.1. The aurora borealis of 1716 and the hypothesis of Edmond Halley . . . . .	139
4.3.2. The consequences of Halley's hypothesis . . . . .	143
4.4. Magnetism in the second half of the 18th century . . . . .	151
4.5. Conclusion . . . . .	157
<b>Chapter 5. Electrical Matter</b> . . . . .	<b>159</b>
5.1. Introduction . . . . .	159
5.2. Highlighting the link between electricity and thunderstorm activity . . . . .	162
5.2.1. The first experimental advances . . . . .	162
5.2.2. Characterization of the natural electricity of the atmosphere . . . . .	165

---

5.3. Knowledge of the nature of electricity in the mid-18th century . . . . .	171
5.4. Precursory work on fiery meteors . . . . .	173
5.5. Explanation using electricity . . . . .	177
5.5.1. Early stages . . . . .	177
5.5.2. Theories based on electricity . . . . .	181
5.5.3. Controversies about the explanation by electricity . . . . .	186
5.6. Elucidation of the origin of fiery meteors and falling stars. . . . .	192
5.7. Conclusion . . . . .	196
<b>Chapter 6. Subtle Air . . . . .</b>	<b>199</b>
6.1. Introduction . . . . .	199
6.2. Difference in mercury heights between different barometers . . . . .	201
6.3. Suspension of water and mercury from the tops of inverted tubes . . . . .	203
6.4. Gravity theories and the impulse system. . . . .	215
6.5. Light barometers. . . . .	227
6.6. Conclusion . . . . .	235
<b>Chapter 7. Results and Theories on the Height of the Atmosphere in the 18th Century . . . . .</b>	<b>237</b>
7.1. Introduction . . . . .	237
7.2. Representation of the atmosphere inherited from previous centuries . . . . .	238
7.2.1. Representation of the atmosphere . . . . .	238
7.2.2. The central question of the height of the atmosphere . . . . .	241
7.3. Two major paradigms for the composition and vertical extension of the atmosphere in the 18th century . . . . .	244
7.3.1. A lower atmosphere heavily laden with vapors and exhalations . . . . .	244
7.3.2. An upper atmosphere extended upwards, but how far up? . . . . .	248
7.4. The three main inconsistencies between estimates of atmospheric height made by different methods . . . . .	253
7.4.1. First inconsistency: twilight duration and atmospheric refraction . . . . .	253
7.4.2. Second inconsistency: atmospheric refraction and air pressure . . . . .	256
7.4.3. Third inconsistency: air pressure and aurora borealis . . . . .	259
7.5. Two other methods for estimating the height of the atmosphere . . . . .	268
7.5.1. Fiery meteors and falling stars . . . . .	268
7.5.2. Projection of the Earth's shadow during lunar eclipses . . . . .	270
7.6. Conclusion . . . . .	270
<b>Chapter 8. Atmospheres of Earthly Bodies . . . . .</b>	<b>275</b>
8.1. Introduction . . . . .	275
8.2. Porosity of bodies . . . . .	279
8.2.1. Boyle's founding treaty. . . . .	279

8.2.2. Musschenbroek's theory inherited from Newton. . . . .	282
8.2.3. Nollet's experiments on porosity . . . . .	285
8.3. Atmospheres of bodies . . . . .	290
8.3.1. The atmosphere of solid bodies according to Boyle . . . . .	290
8.3.2. Mariotte's aerial matter. . . . .	291
8.3.3. Nollet's distillation experiments. . . . .	295
8.3.4. Atmospheres of liquid bodies and ice formation according to Perrault . . . . .	297
8.3.5. Béraud's atmosphere of electric and magnetic etheric matter. . . . .	299
8.3.6. Marat's igneous and luminous atmospheres . . . . .	305
8.4. Conclusion . . . . .	318
<b>Conclusion</b> . . . . .	321
<b>References</b> . . . . .	323
<b>Index</b> . . . . .	337
