<b>Chapter 1. Biological Removal of Nitrogen</b> . . . . .	1
1.1. Nitrogen sources . . . . .	2
1.2. Biochemical mechanisms of nitrogen utilization . . . . .	4
1.2.1. Ammonification. . . . .	4
1.2.2. Nitrification . . . . .	6
1.2.3. Denitrification. . . . .	9
1.3. Factors influencing nitrification . . . . .	16
1.3.1. Temperature . . . . .	17
1.3.2. Growth rate . . . . .	18
1.3.3. Oxygen. . . . .	19
1.3.4. pH and alkalinity . . . . .	19
1.3.5. Nutrients . . . . .	20
1.3.6. Dissolved oxygen and nitrogen substrate . . . . .	20
1.4. Nitrification in an activated sludge system . . . . .	22
1.4.1. Influence of mass loading . . . . .	22
1.4.2. Influence of TSS/MVS concentration in the tank . . . . .	23
1.4.3. Influence of loading rate . . . . .	23
1.4.4. Influence of sludge age. . . . .	24
1.4.5. Nitrification rate. . . . .	24
1.4.6. O <sub>2</sub> requirement . . . . .	25
1.4.7. Dynamic model of nitrification . . . . .	27
1.5. Denitrification in activated sludge and denitrification rate. . . . .	30
1.5.1. Specific anoxic zone for denitrification. . . . .	34
1.5.2. Estimation of excess sludge production. . . . .	35
1.5.3. Carbon addition . . . . .	36
1.6. Nitrification and denitrification processes in activated sludge. . . . .	37
1.6.1. Pre-denitrification. . . . .	37
1.6.2. Post-denitrification . . . . .	37

1.7. Autotrophic denitrification of activated sludge . . . . .	40
1.7.1. Autotrophic denitrification mechanism with sulfur . . . . .	41
1.7.2. Autotrophic denitrification in free culture (activated sludge) . . . . .	43
1.7.3. Autotrophic denitrification in a biofilter . . . . .	46
1.8. Nitrogen treatment by anammox bacteria . . . . .	52
1.8.1. Anammox characteristics . . . . .	54
1.8.2. Microbiological characteristics . . . . .	54
1.8.3. Biochemistry of anaerobic oxidation of ammonium . . . . .	55
1.8.4. Factors influencing the growth of anammox bacteria . . . . .	57
1.8.5. Salinity . . . . .	57
1.8.6. Presence of organic matter and/or nutrients . . . . .	57
1.8.7. <i>Candidatus Brocadia</i> and <i>Kuenenia</i> . . . . .	58
1.8.8. Oxygen . . . . .	60
1.8.9. Temperature . . . . .	60
1.8.10. Substrate concentrations . . . . .	60
1.8.11. Nitrite . . . . .	60
1.8.12. Ammonium ion ( $\text{NH}_4^+$ ) . . . . .	61
1.8.13. Inhibition mechanisms and pH . . . . .	62
1.8.14. Implementation using anammox bacteria . . . . .	62
1.8.15. Nitrogen removal processes using anammox . . . . .	67
1.8.16. Applications . . . . .	76
1.9. MABR: a new opportunity . . . . .	79
1.10. Conclusion . . . . .	80
1.11. References . . . . .	81
<b>Chapter 2. Phosphorus Removal . . . . .</b>	<b>93</b>
2.1. The phosphorus cycle . . . . .	93
2.2. Eutrophication . . . . .	95
2.3. Oxidized mineral forms of phosphorus in wastewater . . . . .	96
2.4. Phosphorus removal processes . . . . .	100
2.4.1. Overview . . . . .	100
2.4.2. Biological phosphorus removal . . . . .	101
2.5. Treatment processes incorporating biological dephosphatation . . . . .	116
2.5.1. Activated sludge . . . . .	117
2.5.2. Biofilters: introduction of reagents into the primary settling tank . . . . .	125
2.5.3. Other biological phosphorus removal technologies . . . . .	125
2.6. Selectors . . . . .	130
2.6.1. Aerobic selector . . . . .	131
2.6.2. Anoxic selector . . . . .	131
2.6.3. Anaerobic selector . . . . .	132

---

2.7. Physicochemical treatment . . . . .	133
2.7.1. Fundamental principles of phosphorus precipitation. . . . .	135
2.8. Implementation of chemical reagents . . . . .	152
2.8.1. Injection points . . . . .	152
2.8.2. Injection control. . . . .	152
2.9. Other technical solutions for phosphorus removal . . . . .	156
2.9.1. Active media for phosphorus removal . . . . .	156
2.9.2. Artificial wetlands . . . . .	159
2.9.3. Ion exchange . . . . .	159
2.10. Overall phosphorus removal performance . . . . .	160
2.11. References . . . . .	161
<b>Chapter 3. Clarification. . . . .</b>	<b>171</b>
3.1. Introduction . . . . .	171
3.1.1. Principle . . . . .	171
3.1.2. Types of clarifiers. . . . .	172
3.2. Settling rate of particles in a liquid. . . . .	173
3.2.1. Diluted suspensions. . . . .	173
3.2.2. Flocculated particles . . . . .	176
3.2.3. Concentrated suspensions . . . . .	177
3.2.4. Sedimentation curves. . . . .	178
3.3. Settling theory . . . . .	180
3.3.1. Fundamental law: Kynch theory. . . . .	180
3.4. Mathematical interpretation of the different types of settling . . . . .	187
3.4.1. Free or coalescent settling (zone B, Figure 3.2) . . . . .	187
3.4.2. Hindered settling (zone C, Figure 3.2) . . . . .	193
3.4.3. Compaction zone . . . . .	197
3.5. Sizing of clarifiers . . . . .	197
3.5.1. Different sizing approaches . . . . .	201
3.5.2. Coalescing settling (zone B, Figure 3.13). . . . .	203
3.5.3. Hindered settling zone and sludge blanket clarifiers (zone C, Figure 3.13) . . . . .	207
3.5.4. Sludge compaction zone (zone D, Figure 3.13) . . . . .	208
3.5.5. Relationship between settling rate and height of equipment . . . . .	211
3.6. Characteristics of classic clarifiers . . . . .	215
3.6.1. Horizontal clarifiers. . . . .	216
3.6.2. Cylindrical clarifiers . . . . .	221
3.6.3. Other technologies . . . . .	225
3.6.4. General design of conventional clarifiers. . . . .	225

3.7. Inclined pipe clarifiers. . . . .	232
3.7.1. Theory and principle . . . . .	233
3.7.2. Sizing principles for lamellar clarifiers . . . . .	236
3.8. Clarifier malfunctions. . . . .	243
3.9. Technologies . . . . .	245
3.9.1. Clariflo® clarifier (Veolia). . . . .	245
3.9.2. Rim-Flo® clarifier . . . . .	247
3.9.3. TowBro® scraper. . . . .	249
3.9.4. Lamellar settling tank: Multiflo® (Veolia). . . . .	250
3.10. References . . . . .	255
<b>Index.</b> . . . . .	259
