<b>Introduction . . . . .</b>	xix
Christine BLANC and Isabelle AUBERT	
<b>Chapter 1. Environmentally Assisted Cracking: Some Critical Aspects . . . . .</b>	1
Pierre COMBRADE	
1.1. Introduction . . . . .	1
1.2. Practical identification of susceptibility to EAC . . . . .	3
1.2.1. Material variability and surface conditions . . . . .	3
1.2.2. Experimental conditions . . . . .	6
1.3. The cracking processes . . . . .	9
1.3.1. Crack initiation: the stages towards “long” cracks . . . . .	9
1.3.2. Activity, passivity and EAC . . . . .	12
1.3.3. Mechanics–corrosion interactions and crack initiation . . . . .	15
1.3.4. Propagation: environmental and mechanical conditions at the crack tip . . . . .	16
1.4. Conclusion . . . . .	19
1.5. References . . . . .	20
<b>Part 1. The Basics for Understanding Mechanics– Environment–Microstructure Couplings . . . . .</b>	23
<b>Chapter 2. The Basics to Better Understand Couplings in Physical Metallurgy . . . . .</b>	25
Mohamed GOUNÉ, Éric ANDRIEU, Yves BRÉCHET, Alexis DESCHAMPS, Joël DOUIN, Marc FIVEL and Angéline POULON-QUINTIN	
2.1. Structures and defects . . . . .	25

2.1.1. Structures . . . . .	25
2.1.2. Point defects . . . . .	26
2.1.3. Linear defects . . . . .	26
2.1.4. Planar defects . . . . .	30
2.1.5. Hardening . . . . .	30
2.1.6. Modeling contribution . . . . .	31
2.2. Phase transformations and segregation. . . . .	33
2.2.1. Thermodynamics . . . . .	33
2.2.2. Nucleation . . . . .	34
2.2.3. Growth modes. . . . .	35
2.2.4. Experimental methods . . . . .	37
2.3. Effect of mechanical fields. . . . .	39
2.3.1. Introduction . . . . .	39
2.3.2. Effects of internal stress . . . . .	40
2.3.3. Effects of an external mechanical field . . . . .	43
2.4. References . . . . .	46
 <b>Chapter 3. Continuum Mechanics</b> . . . . .	49
Philippe PILVIN	
3.1. Introduction. . . . .	49
3.2. Kinematics of 3D continuous media . . . . .	50
3.2.1. Continuous medium concept – fundamental assumptions . . . . .	51
3.2.2. Motion description . . . . .	51
3.2.3. Strain and strain rate . . . . .	52
3.3. Internal forces in continuous media . . . . .	54
3.3.1. Historical Cauchy approach – principle of virtual powers . . . . .	55
3.3.2. Intrinsic properties of the stress tensor . . . . .	56
3.4. Thermodynamic approach of the constitutive equations . . . . .	57
3.4.1. General concepts . . . . .	57
3.4.2. Thermoelasticity and diffusion models . . . . .	58
3.4.3. Useful elasticity problems in materials science . . . . .	59
3.4.4. Macroscopic plasticity and viscoplasticity models . . . . .	62
3.5. References . . . . .	63
 <b>Chapter 4. Fatigue Crack Initiation and Propagation</b> . . . . .	65
Véronique DOQUET, Gilbert HÉNAFF, Thierry PALIN-LUC and Marion RISBET	
4.1. Introduction. . . . .	65
4.2. Cyclic mechanical behavior, plastic fatigue . . . . .	65
4.2.1. Plastic or low-cycle fatigue tests . . . . .	65
4.2.2. Cyclic mechanical behavior . . . . .	66
4.3. High-cycle and very high-cycle fatigue . . . . .	69
4.3.1. High-cycle fatigue tests . . . . .	69

---

4.3.2. Crack initiation, influence parameters . . . . .	70
4.3.3. Multiaxial fatigue . . . . .	70
4.3.4. A few words on gigacycle fatigue . . . . .	73
4.4. Fatigue crack propagation . . . . .	74
4.4.1. Characterization of fatigue crack growth resistance . . . . .	74
4.4.2. Using fracture mechanics concepts – the concept of $\Delta K$ . . . . .	74
4.4.3. Monotonic and cyclic plastic zones . . . . .	76
4.4.4. Effect of the R ratio, crack closure . . . . .	77
4.4.5. Fatigue crack propagation laws . . . . .	78
4.4.6. Intrinsic resistance to fatigue cracking . . . . .	78
4.4.7. Fatigue crack propagation threshold – environment/closure/microstructure interactions . . . . .	79
4.4.8. Propagation of small cracks . . . . .	80
4.5. Mixed-mode fatigue crack growth . . . . .	81
4.5.1. Fatigue cracking in mode III . . . . .	82
4.5.2. Fatigue cracking in mode II . . . . .	83
4.5.3. Interaction between modes . . . . .	84
4.5.4. Effect of the environment on the crack path . . . . .	84
4.6. References . . . . .	85
<b>Chapter 5. Surface Chemistry and Passivation of Metals and Alloys . . . . .</b>	<b>91</b>
Philippe MARCUS, Élie PROTOPOPOFF and Vincent MAURICE	
5.1. Surface chemistry . . . . .	91
5.1.1. Surface structure of metals . . . . .	91
5.1.2. Surface thermodynamics . . . . .	95
5.1.3. Adsorption phenomena . . . . .	98
5.1.4. Structure of adsorption layers . . . . .	102
5.1.5. Extension to oxide surfaces . . . . .	105
5.2. Metal and alloy passivation . . . . .	107
5.2.1. Thermodynamic aspects . . . . .	107
5.2.2. Electrochemical characteristics . . . . .	109
5.2.3. Thickness of passive layers and their chemical composition . . . . .	110
5.2.4. Structure of the passive layers . . . . .	112
5.2.5. Oxide layers growth mechanisms . . . . .	114
5.2.6. Role of alloying elements in alloys . . . . .	115
5.2.7. Initiation of localized corrosion (pitting) . . . . .	117
5.2.8. Methods for passivation study . . . . .	119
5.3. References . . . . .	120

<b>Chapter 6. Electrochemistry for Mechanically-assisted Corrosion . . . . .</b>	121
Sabrina MARCELIN, Bernard NORMAND, Roland OLTRA and Vincent VIVIER	
6.1. Conceptualization elements of mechanically-assisted corrosion . . . . .	121
6.1.1. Mixed potential concepts: corrosion and activation energy potentials. . . . .	121
6.1.2. Reaction kinetics concepts . . . . .	123
6.1.3. Corrosion-deformation interactions . . . . .	124
6.2. From the phenomenological analysis to the electrochemical analysis . . . . .	125
6.3. Corrosion due to the local fracture of the passive film . . . . .	127
6.3.1. Electrochemical properties of the passive film. . . . .	128
6.3.2. Electrochemical analysis of the loss of integrity of the passive film . . . . .	132
6.4. Physical contribution associated with the electrochemical reduction reaction: effects induced by the proton reduction reaction. . . . .	134
6.5. Electrochemical phenomena in a confined environment . . . . .	135
6.6. Principles of local electrochemical measurements . . . . .	137
6.7. Conclusion . . . . .	139
6.8. References . . . . .	140
<b>Chapter 7. Modeling Tools: From the Atom to the Macroscopic Scale . . . . .</b>	145
Charlotte BECQUART, Christophe DOMAIN, Marc FIVEL, Michel PEREZ and Ludovic THUINET	
7.1. Introduction . . . . .	145
7.2. The atomic scale . . . . .	145
7.2.1. Cohesive models . . . . .	146
7.2.2. Molecular dynamics . . . . .	148
7.2.3. The Monte Carlo methods. . . . .	150
7.3. Mesoscopic scale . . . . .	152
7.3.1. Object Kinetic Monte Carlo (OKMC). . . . .	152
7.3.2. Cluster dynamics or chemical kinetics . . . . .	153
7.3.3. The phase field method . . . . .	154
7.3.4. Dislocation dynamics (DD) . . . . .	156
7.4. Macroscopic scale: crystal plasticity . . . . .	159
7.4.1. The models. . . . .	159
7.5. Conclusion . . . . .	163
7.6. References . . . . .	163

**Part 2. Hydrogen and the Embrittlement of Metallic Materials . . . . . 169****Chapter 8. State of Hydrogen in Matter: Fundamental Ad/Absorption, Trapping and Transport Mechanisms . . . . . 171**  
Frantz MARTIN, Xavier FEAUGAS, Abdelali OUDRISS, Döme TANGUY,  
Laurent BRIOTTET and Jean KITTEL

8.1. Hydrogen sources and important parameters . . . . .	171
8.2. Adsorption . . . . .	172
8.2.1. Gaseous environment . . . . .	172
8.2.2. Aqueous environment . . . . .	176
8.3. Absorption – dissolution . . . . .	177
8.3.1. Absorption: hydrogen moving from the surface to the subsurface . . . . .	178
8.3.2. Hydrogen in solid solution . . . . .	178
8.3.3. Hydrogen solubility . . . . .	178
8.3.4. Hydride formation . . . . .	180
8.4. Diffusion . . . . .	180
8.5. Trapping . . . . .	182
8.5.1. Trap types and general characteristics . . . . .	183
8.5.2. Diffusion/trapping models . . . . .	185
8.6. Hydrogen transport by mobile defects . . . . .	186
8.6.1. Transport by mobile dislocations . . . . .	186
8.6.2. Transport by vacancies . . . . .	187
8.7. Conclusion . . . . .	188
8.8. References . . . . .	189

**Chapter 9. Hydrogen and Crystal Defects Interactions:  
Effects on Plasticity and Fracture . . . . . 199**  
Xavier FEAUGAS and David DELAFOSSE

9.1. Introduction . . . . .	199
9.2. The role of hydrogen during interface decohesion . . . . .	200
9.3. The effect of hydrogen on plastic deformation processes . . . . .	201
9.3.1. Basic mechanisms in face-centered cubic alloys . . . . .	201
9.3.2. Elementary mechanisms in body-centered cubic alloys . . . . .	203
9.3.3. Elementary mechanisms in hexagonal close packed alloys (Zr, Ti) . . . . .	204
9.3.4. Influence of hydrogen on collective dislocation mechanisms . . . . .	205
9.4. Embrittlement through vacancy formation . . . . .	208
9.5. Embrittlement through hydride formation . . . . .	209
9.6. Conclusion and unanswered questions . . . . .	210
9.7. References . . . . .	211

<b>Chapter 10. Industrial Consequences of Hydrogen Embrittlement . . . . .</b>	223
Laurent BRIOTTET, Rémi BATISSE, Pierre BERNARD, Claude DURET-THUAL, Jean-Loup HEUZÉ, Frantz MARTIN, Florian THEBAULT and Flavien VUCKO	
10.1. Introduction . . . . .	223
10.2. The energy sector . . . . .	224
10.2.1. Oil and gas industry . . . . .	224
10.2.2. Gas industry . . . . .	226
10.2.3. Nuclear applications . . . . .	230
10.3. Hydrogen in transport . . . . .	233
10.3.1. The automotive industry . . . . .	233
10.3.2. The naval industry . . . . .	236
10.3.3. The aerospace industry . . . . .	239
10.4. References . . . . .	241
<b>Chapter 11. Experimental Techniques for Dosage and Detection of Hydrogen . . . . .</b>	245
Abdelali OUDRISS, Frantz MARTIN and Xavier FEAUGAS	
11.1. Introduction . . . . .	245
11.2. Quantitative or semi-quantitative experimental dosage techniques . . . . .	246
11.2.1. Hydrogen content measurement within a material . . . . .	247
11.2.2. Local measurements for hydrogen content within a material . . . . .	252
11.3. Hydrogen location methods within a microstructure . . . . .	256
11.3.1. Direct methods . . . . .	256
11.3.2. Indirect methods . . . . .	260
11.4. Conclusion . . . . .	263
11.5. References . . . . .	264
<b>Part 3. Stress Corrosion Cracking . . . . .</b>	269
<b>Chapter 12. Effect of Stress/Strain Fields on Electrochemical Activity: Metallurgy/Stress Interaction and Surface Reactivity . . . . .</b>	271
Vincent VIGNAL, Olivier DEVOS and Xavier FEAUGAS	
12.1. Introduction . . . . .	271
12.2. Structural modification: the different contributions of deformation . . . . .	272
12.3. Thermokinetic approach . . . . .	273
12.4. Towards a measure of the weight of each contribution: some examples of the mechanical impact . . . . .	276

---

12.4.1. Cathodic process . . . . .	276
12.4.2. Dissolution process . . . . .	277
12.4.3. Stability of the passive film . . . . .	278
12.5. Conclusion . . . . .	282
12.6. References . . . . .	283
<b>Chapter 13. Stress Corrosion Cracking. Between the Corrosion Defect and the Long Crack: the Phase of the Initiation of the Cracks . . . . .</b>	287
Christine BLANC, Juan CREUS and Marie TOUZET-CORTINA	
13.1. Introduction . . . . .	287
13.2. Incubation phase . . . . .	287
13.2.1. Processes not induced by corrosion reactions . . . . .	288
13.2.2. Processes assisted by corrosion reactions . . . . .	289
13.3. Initiation of cracks: transition between corrosion defects and short cracks . . . . .	293
13.3.1. Geometry of the defect and stress concentration . . . . .	293
13.3.2. Impact of the environment on defect/crack transition . . . . .	295
13.4. Propagation of short cracks . . . . .	299
13.4.1. Notion of short cracks . . . . .	299
13.4.2. Effect of the different parameters on the propagation of short cracks . . . . .	300
13.4.3. Experimental measurement of the propagation rates . . . . .	302
13.4.4. Transition criteria towards a long crack/transition criteria for slow–rapid propagation . . . . .	303
13.5. Conclusion . . . . .	306
13.6. References . . . . .	306
<b>Chapter 14. Stress Corrosion Crack Propagation . . . . .</b>	313
Catherine GUERRE, Marion FRÉGONÈSE, Quentin AUZOUX, Isabelle AUBERT and Cécilie DUHAMEL	
14.1. Introduction . . . . .	313
14.2. Elementary physical SCC cracking propagation mechanisms . . . . .	314
14.2.1. Anodic dissolution: slip dissolution model . . . . .	314
14.2.2. Debonding . . . . .	314
14.2.3. Plasticity and visco-plasticity . . . . .	315
14.2.4. Oxidation . . . . .	315
14.2.5. Condensation of vacancies, microcavities . . . . .	316
14.2.6. Effects of irradiation . . . . .	316
14.2.7. Conclusion . . . . .	317
14.3. Study of long crack propagation under SCC . . . . .	318
14.3.1. Introduction . . . . .	318

14.3.2. Material parameters . . . . .	319
14.3.3. Environmental parameters . . . . .	322
14.3.4. Mechanical parameters . . . . .	324
14.3.5. Propagation laws . . . . .	326
14.4. Multi-cracking . . . . .	328
14.4.1. General information . . . . .	329
14.4.2. Interaction between cracks . . . . .	330
14.5. Conclusion and limitations . . . . .	333
14.6. References . . . . .	334
<b>Chapter 15. Oxidation-assisted Cracking . . . . .</b>	<b>339</b>
Benoît TER-OVANESSIAN, Aurélien VILLANI, Eric ANDRIEU and Samuel FOREST	
15.1. Introduction . . . . .	339
15.2. Multiprocess assistance: oxidation's role . . . . .	342
15.2.1. External oxidation . . . . .	343
15.2.2. Internal oxidation . . . . .	344
15.2.3. Intergranular oxidation . . . . .	346
15.3. From multiple processes to coupled processes . . . . .	346
15.3.1. Mechanical-diffusion coupling . . . . .	346
15.3.2. Coupling intergranular mechanical-diffusion- oxidation behavior . . . . .	349
15.3.3. Simulation methods for mechanical-oxidation intergranular coupling . . . . .	352
15.4. Conclusion . . . . .	355
15.5. References . . . . .	355
<b>Chapter 16. Stress Corrosion Cracking: From In-service Cracking to Laboratory Studies . . . . .</b>	<b>359</b>
Krzysztof WOLSKI, Pierre COMBRADE, François DUPOIRON, Claude DURET-THUAL and Fiona RUEL	
16.1. Introduction . . . . .	359
16.2. Some aspects of the fight against stress corrosion cracking using laboratory tests . . . . .	360
16.2.1. Component design . . . . .	360
16.2.2. Crack initiation study . . . . .	362
16.2.3. SCC crack propagation study . . . . .	365
16.2.4. Mitigation of SCC problems on existing components . . . . .	366
16.3. Cases highlighting specific problems . . . . .	372
16.3.1. Stress corrosion versus hydrogen embrittlement . . . . .	372
16.3.2. Short cracks . . . . .	375
16.4. Conclusion . . . . .	379
16.5. References . . . . .	380

<b>Part 4. Corrosion Fatigue . . . . .</b>	<b>383</b>
<b>Chapter 17. Corrosion and Hydrogen Fatigue at Different Scales . . . . .</b>	<b>385</b>
Nicolas SAINTIER, Mohamed EL MAY, Grégory ODEMER, Gilbert HÉNAFF, Cédric BOSCH, Xavier FEAUGAS and Thierry COUVANT	
17.1. Introduction . . . . .	385
17.2. Fatigue endurance in a situation of corrosion fatigue coupling . . . . .	386
17.2.1. Crack initiation and structures of deformation . . . . .	386
17.2.2. Coupling phenomena between cyclic deformation and corrosion . . . . .	390
17.2.3. Effect of the microstructure . . . . .	394
17.2.4. Loading frequency effect . . . . .	394
17.2.5. Environmental effect . . . . .	395
17.2.6. Analytical model for corrosion fatigue initiation . . . . .	396
17.2.7. Effect of a pre-corrosion . . . . .	397
17.3. Initiation and propagation of short cracks . . . . .	397
17.3.1. Specific features of short cracks . . . . .	397
17.3.2. Phenomenology of the pitting-crack transition . . . . .	398
17.3.3. Modeling transition pitting/short cracks . . . . .	400
17.4. Role of the environment on crack propagation by fatigue . . . . .	401
17.4.1. Effect of a gaseous environment on fatigue cracking: the case of water vapor and hydrogen . . . . .	401
17.4.2. Specific case of crack propagation under gaseous hydrogen . . . . .	403
17.4.3. Effect of an aqueous environment on fatigue cracking . . . . .	403
17.5. References . . . . .	405
<b>Chapter 18. Local-scale Modeling of Plasticity–Environment Interactions . . . . .</b>	<b>413</b>
Isabelle AUBERT, Jamaa BOUHATTATE, Yann CHARLES, Thierry COUVANT, Matthieu DHONDT, Cécilie DUHAMEL, Marion FRÉGONÈSE, Monique GASPÉRINI, Gilbert HÉNAFF, Arnaud METSUE and Nicolas SAINTIER	
18.1. Introduction . . . . .	413
18.2. Incubation modeling . . . . .	414
18.2.1. Consensus on the incubation mechanisms to be modeled . . . . .	414
18.2.2. Incubation mechanism models . . . . .	415
18.3. Initiation modeling . . . . .	422
18.3.1. Consensus on the mechanisms to be modeled . . . . .	422
18.3.2. Initiation mechanisms modeling . . . . .	422
18.4. Propagation: extension process . . . . .	424
18.4.1. Consensus on the mechanisms to be modeled . . . . .	424
18.4.2. Propagation mechanism models . . . . .	424
18.5. Conclusion . . . . .	430

18.5.1. Assessment of the capacity to simulate/predict degradation . . . . .	430
18.5.2. Short-term and long-term challenges in order to do better . . . . .	431
18.6. References . . . . .	432
<b>Chapter 19. Specific Cases of Corrosion Fatigue . . . . .</b>	<b>439</b>
Cédric BOSCH and Nathalie PAUZE	
19.1. Introduction . . . . .	439
19.2. Alloy microstructure . . . . .	440
19.3. Localized corrosion . . . . .	441
19.4. Stress corrosion . . . . .	443
19.4.1. Experimental procedure . . . . .	443
19.4.2. Results . . . . .	444
19.5. Corrosion fatigue . . . . .	446
19.5.1. Experimental procedure . . . . .	447
19.5.2. Results . . . . .	448
19.6. Conclusion . . . . .	456
19.7. References . . . . .	456
<b>Part 5. Additional Information and the Paths to Solving Interrelated Problems . . . . .</b>	<b>457</b>
<b>Chapter 20. Local Electrochemical Methods Adapted to Studying Environment–Microstructure–Mechanics Couplings . . . . .</b>	<b>459</b>
Olivier DEVOS, Nadine PÉBÈRE, Vincent VIGNAL and Vincent VIVIER	
20.1. Introduction . . . . .	459
20.2. Electrochemical microscopy . . . . .	459
20.2.1. Principle and operating modes . . . . .	459
20.2.2. Applications for the study of corrosion processes . . . . .	461
20.2.3. Applications to environment – microstructure – mechanics couplings . . . . .	463
20.3. Electrochemical microcells . . . . .	465
20.3.1. Principals and user modes . . . . .	465
20.3.2. Precautions and limitations . . . . .	466
20.3.3. Possible application fields in corrosion . . . . .	467
20.3.4. Applications to environment – microstructure – mechanics couplings . . . . .	468
20.4. Local Electrochemical Impedance Spectroscopy (LEIS) . . . . .	469
20.4.1. Principle and operating modes . . . . .	469
20.4.2. Applications for studying corrosion processes . . . . .	470
20.4.3. Applications to environment – microstructure – mechanics couplings . . . . .	472
20.5. Local potential measurement technique (SRET) . . . . .	473

20.6. Scanning Vibrating Electrode Technique . . . . .	474
20.7. Conclusion . . . . .	475
20.8. References . . . . .	476
<b>Chapter 21. Mechanical Tests in Corrosive Environments and Under Gaseous Hydrogen. . . . .</b>	<b>481</b>
Cédric BOSCH, Laurent BRIOTTET, Thierry COUVANT, Marion FRÉGONÈSE and Abdelali OUDRISS	
21.1. Introduction . . . . .	481
21.2. Instrumented mechanical tests for transient current analysis . . . . .	482
21.2.1. Introduction . . . . .	482
21.2.2. Experimental procedure . . . . .	482
21.2.3. Damage: localized corrosion induced by fatigue. . . . .	483
21.3. Instrumentation of mechanical tests by digital image correlation . . . . .	485
21.3.1. Objective and presentation of the technique . . . . .	485
21.3.2. DIC application to SCC . . . . .	486
21.4. Mechanical tests in a gaseous hydrogen atmosphere. . . . .	488
21.4.1. HE sensitivity under gaseous hydrogen . . . . .	488
21.4.2. Specific features of a gaseous environment. . . . .	489
21.4.3. Test environment quality. . . . .	489
21.4.4. Force measurement . . . . .	490
21.4.5. Deformation measurement. . . . .	491
21.5. Mechanical testing methodology combining crystalline plasticity and EBSD analysis to detect crack initiation . . . . .	491
21.6. Electrochemical noise analysis for SCC . . . . .	495
21.6.1. General information . . . . .	495
21.6.2. Electrochemical noise measurement during SCC tests . . . . .	496
21.7. Electrochemical permeation test under mechanical loading. . . . .	497
21.7.1. Experimental assembly. . . . .	498
21.7.2. Experimental procedures. . . . .	499
21.7.2. Influence of a mechanical state on hydrogen permeability. . . . .	501
21.7.3. Limitations . . . . .	501
21.8. References . . . . .	502
<b>Chapter 22. Liquid Metal Embrittlement. . . . .</b>	<b>507</b>
Thierry AUGER, Jean-Bernard VOGT and Ingrid PRORIOL SERRE	
22.1. Liquid metal embrittlement. . . . .	507
22.1.1. Introduction . . . . .	507
22.1.2. Rupture of a natural gas production unit heat exchanger. . . . .	507
22.1.3. Pipe rupture of a material characterization test loop in the presence of lead-bismuth . . . . .	509

22.1.4. Galvanization's effect on the microstructure and rupture of low and medium carbon steels . . . . .	510
22.2. Definition and characteristics of liquid metal embrittlement . . . . .	511
22.3. Highlighting liquid metal embrittlement . . . . .	513
22.3.1. Specificity and general precautions for mechanical tests in the presence of liquid metal . . . . .	513
22.3.2. Importance of choosing the mechanical test when highlighting liquid metal embrittlement . . . . .	515
22.3.3. Importance of experimental conditions for highlighting liquid metal embrittlement . . . . .	519
22.4. Liquid metal embrittlement mechanisms . . . . .	522
22.4.1. Prerequisites . . . . .	522
22.4.2. Cracking and interfacial rupture routes . . . . .	524
22.4.3. Mechanisms . . . . .	527
22.5. References . . . . .	529
