Introduction	xi
Georges CHAPOUTHIER and Marie-Christine MAUREL	
Chapter 1. Possible Traces and Clues of Early Life Forms.	1
Marie-Christine MAUREL	
1.1. Introduction.	1
1.2. Have “things” always been as they are today?	2
1.3. Fossil traces?	4
1.4. Geochemical elements confirming these recent results	6
1.5. Compartmentalization of resources and primary biomass	9
1.6. Rebuilding a living cell: a wide range of possibilities explored, from the mineral to the organic.	12
1.7. Conclusion	13
1.8. Acknowledgments	14
1.9. References	14
Chapter 2. The Nature of Life.	19
Andreas LOSCH	
2.1. Observations and assumptions.	20
2.2. Descriptions and definitions	21
2.3. Exploration	23
2.4. Conclusion	25
2.5. References	26

Chapter 3. From Form to Function	29
Jean-Pierre GASC	
3.1. Form: a concept for knowledge	29
3.2. Basic structural elements: from the molecule to the cell	31
3.3. The weight of the physical setting	34
3.4. Mesoderm: base material for architect genes	35
3.5. Appendices and laws of mechanics	37
3.6. “Appendicular” movement on land	40
3.7. The legless	44
3.8. And the head	44
3.9. References	47
Chapter 4. On Growth and Form: Context and Purpose.	51
Jean-Pierre GASC	
4.1. D’Arcy Thompson’s program	54
4.2. Application of mathematics to morphometry	59
4.3. References	61
Chapter 5. The Emergence of Form in the History of Epigenetics.	65
Jonathan B. WEITZMAN	
5.1. Introduction.	65
5.2. From epigenesis to epigenetics	66
5.3. The evolution of the epigenetic landscape.	68
5.4. Modernizing the epigenetic landscape	70
5.5. From epigenetic landscape to chromosome conformation	72
5.6. Conclusion: from form to function	75
5.7. Acknowledgments.	76
5.8. References	76
Chapter 6. The Many Shapes of Microbial Detection of Kin and Kind.	79
Guillermo PAZ-Y-MIÑO-C and Avelina ESPINOSA	
6.1. From Darwin’s social-insects-puzzle to microbes	80
6.2. Handshakes of kinship or “kindship” in bacteria	81
6.3. The ameba world of clone discrimination/recognition	85
6.4. Social microbes and multicellularity	88

6.5. Conclusion	95
6.6. References	95
Chapter 7. Development and Evolution of Plant Forms	101
Florian JABBOUR and Guilhem MANSION	
7.1. Introduction.	101
7.2. Diversity of plant forms and associated functions	102
7.2.1. Anthropocentric view of plant forms	102
7.2.2. Plant forms perceived by pollinators.	103
7.3. Origin and evolution of plant forms	104
7.3.1. Pattern formation during ontogenesis	104
7.3.2. Physical-mathematical considerations on plant morphogenesis	105
7.3.3. Implementation of forms during phylogenesis	107
7.4. Origin and evolution of plant forms	112
7.4.1. Usefulness for human societies	112
7.4.2. Usefulness for botanical classifiers	114
7.5. Conclusion	118
7.6. Acknowledgements	118
7.7. References	118
Chapter 8. Forms of Memory	125
Robert JAFFARD	
8.1. Introduction.	125
8.2. The polymorphism of memory	126
8.3. Non-associative memories	127
8.3.1. Habituation and sensitization	127
8.3.2. Priming	129
8.3.3. Perceptual learning	130
8.4. Classical conditioning.	131
8.4.1. Operational definition, rules and varieties of classical conditioning	131
8.4.2. Contemporary theory of classical conditioning	132
8.4.3. The importance of classical conditioning	133
8.5. Instrumental conditioning	134
8.5.1. Law of effect, stimulus-response (S-R) theory and “habits”	134
8.5.2. From S-R theory to cognitive theories.	135
8.5.3. The two facets of instrumental conditioning	136

8.6. Procedural memory as a “memory system”	137
8.6.1. Habits: double functional dissociations in mammals	137
8.6.2. Human procedural memory and its cerebral supports	139
8.7. Declarative memory	140
8.7.1. Episodic and semantic memory: definitions, properties and relationships	141
8.7.2. Episodic memory in animals?	143
8.8. Short-term memory and working memory	144
8.8.1. General characteristics	144
8.8.2. Models	144
8.8.3. Short-term memory in animals	146
8.8.4. Cerebral substrates	147
8.9. Conclusion: organization and reconfiguration of the different forms of memory	147
8.10. References	150
Chapter 9. The Construction of Sensory Universes	155
Dalila BOVET	
9.1. Introduction	155
9.2. Chemoreception	156
9.2.1. Taste	156
9.2.2. Smell	158
9.3. Mechanoreception	159
9.3.1. Touch	160
9.3.2. Lateral lines	160
9.3.3. Hearing	161
9.4. Electromagnetoreception	163
9.4.1. Vision	163
9.4.2. Electroreception	165
9.4.3. Magnetoreception	166
9.4.4. Thermoreception	167
9.5. Information filtering	167
9.6. Conclusion	170
9.7. References	172
Chapter 10. Emotional and Social Forms of Robots	173
Laurence DEVILLERS	
10.1. Introduction	173
10.2. Communication with social and emotional robots	175
10.3. Human empathy for machines	176

10.4. Machine emotions	178
10.5. Conclusion: risks and benefits	180
10.6. References.	181
Chapter 11. When Medical Technology Mimics Living Forms	183
Didier FASS	
11.1. Introduction	183
11.2. Historical and epistemological perspective	184
11.2.1. A comparative history of medical technology	184
11.2.2. Epistemological perspective	189
11.2.3. A conceptual and theoretical framework: the mathematical theory of integrative physiology (MTIP) by Gilbert Chauvet	193
11.2.4. Forms of thinking or processing by machines	196
11.3. Simulation, biomimetics and bioprinting: a future for medical technology.	196
11.4. References.	199
Chapter 12. From Living to Thinking: Mosaic Architecture	203
Georges CHAPOUTHIER	
12.1. Introduction	203
12.2. Two main principles	203
12.3. Genes and cells	204
12.4. More complex anatomical mosaics	206
12.5. Epistemological rehabilitation of asexual reproduction	207
12.6. Social mosaics	208
12.7. Encephalic mosaics	208
12.8. Mosaics of thought.	210
12.9. Man-made objects	213
12.10. Human and animal cultural traits	214
12.11. A universality of mosaics?	215
12.12. Conclusion: philosophical foundations	216
12.13. References	217
Chapter 13. Converging Technologies or Paradoxes of Power	221
Jean-Michel BESNIER	
13.1. Introduction	221

13.2. Might, domination, power	223
13.3. Life, technique, power.	224
13.4. “Technological arrogance”	227
13.5. Technological convergence and singularity	228
13.6. Innovation, research, invention	230
13.7. Conclusion	231
13.8. References.	231
List of Authors	233
Index	235
