Contents

Introduction xiii
Badr BENMAMMAR

Part 1. AI and Network Security 1

Chapter 1. Intelligent Security of Computer Networks 3
Abderrazaq SEMMOUD and Badr BENMAMMAR

1.1. Introduction 3
1.2. AI in the service of cybersecurity 5
1.3. AI applied to intrusion detection 8
1.3.1. Techniques based on decision trees 9
1.3.2. Techniques based on data exploration 9
1.3.3. Rule-based techniques 10
1.3.4. Machine learning-based techniques 11
1.3.5. Clustering techniques 13
1.3.6. Hybrid techniques 14
1.4. AI misuse 15
1.4.1. Extension of existing threats 16
1.4.2. Introduction of new threats 16
1.4.3. Modification of the typical threat character 17
1.5. Conclusion 17
1.6. References 18

Chapter 2. An Intelligent Control Plane for Security Services Deployment in SDN-based Networks 25
Maïssa MBAYE, Omessaad HAMDI and Francine KRIEF

2.1. Introduction 25
2.2. Software-defined networking 27
2.2.1. General architecture 27
2.2.2. Logical distribution of SDN control 29
2.3. Security in SDN-based networks 32
2.3.1. Attack surfaces 33
2.3.2. Example of security services deployment in SDN-based networks: IPSec service 34
2.4. Intelligence in SDN-based networks 40
2.4.1. Knowledge plane 41
2.4.2. Knowledge-defined networking 41
2.4.3. Intelligence-defined networks 42
2.5. AI contribution to security 43
2.5.1. ML techniques 43
2.5.2. Contribution of AI to security service: intrusion detection 47
2.6. AI contribution to security in SDN-based networks 48
2.7. Deployment of an intrusion prevention service 49
2.7.1. Attack signature learning as cloud service 50
2.7.2. Deployment of an intrusion prevention service in SDN-based networks 52
2.8. Stakes 55
2.9. Conclusion 56
2.10. References 56

Part 2. AI and Network Optimization 63

Chapter 3. Network Optimization using Artificial Intelligence Techniques 65
Asma AMRAOUI and Badr BENMAMMAR

3.1. Introduction 65
3.2. Artificial intelligence 66
3.2.1. Definition 66
3.2.2. AI techniques 67
3.3. Network optimization 73
3.3.1. AI and optimization of network performances 73
3.3.2. AI and QoS optimization 74
3.3.3. AI and security 75

3.3.4. AI and energy consumption 77
3.4. Network application of AI 77
3.4.1. ESs and networks 77
3.4.2. CBR and telecommunications networks 79
3.4.3. Automated learning and telecommunications networks 79
3.4.4. Big data and telecommunications networks 80
3.4.5. MASs and telecommunications networks 82
3.4.6. IoT and networks 84
3.5. Conclusion 85
3.6. References 85

Chapter 4. Multicriteria Optimization Methods for Network Selection in a Heterogeneous Environment 89
Fayssal BENDAOUD

4.1. Introduction 89
4.2. Multicriteria optimization and network selection 91
4.2.1. Network selection process 92
4.2.2. Multicriteria optimization methods for network selection 94
4.3. "Modified-SAW" for network selection in a heterogeneous environment 99
4.3.1. "Modified-SAW" proposed method 100
4.3.2. Performance evaluation 104
4.4. Conclusion 113
4.5. References 113

Part 3. AI and the Cloud Approach 117

Chapter 5. Selection of Cloud Computing Services: Contribution of Intelligent Methods 119
Ahmed Khalid Yassine SETTOUTI

5.1. Introduction 119
5.2. Scientific and technical prerequisites 120
5.2.1. Cloud computing 120
5.2.2. Artificial intelligence 126
5.3. Similar works 129
5.4. Surveyed works 131
5.4.1. Machine learning 131
5.4.2. Heuristics 133
5.4.3. Intelligent multiagent systems 135

5.4.4. Game theory 137
5.5. Conclusion 140
5.6. References 140

Chapter 6. Intelligent Computation Offloading in the Context of Mobile Cloud Computing 145
Zeinab MOVAHEDI

6.1. Introduction 145
6.2. Basic definitions 147
6.2.1. Fine-grain offloading 147
6.2.2. Coarse-grain offloading 149
6.3. MCC architecture 151
6.3.1. Generic architecture of MCC 151
6.3.2. C-RAN-based architecture 154
6.4. Offloading decision 154
6.4.1. Positioning of the offloading decision middleware 155
6.4.2. General formulation 156
6.4.3. Modeling of offloading cost 158
6.5. AI-based solutions 161
6.5.1. Branch and bound algorithm 161
6.5.2. Bio-inspired metaheuristics algorithms 164
6.5.3. Ethology-based metaheuristics algorithms 165
6.6. Conclusion 165
6.7. References 166

Part 4. AI and New Communication Architectures 169

Chapter 7. Intelligent Management of Resources in a Smart Grid-Cloud for Better Energy Efficiency 171
Mohammed Anis BENBLIDIA, Leila MERGHEM-BOULAHIA, Moez ESSEGHIR and Bouziane BRIK

7.1. Introduction 171
7.2. Smart grid and cloud data center: fundamental concepts and architecture 172
7.2.1. Network architecture for smart grids 173
7.2.2. Main characteristics of smart grids 174
7.2.3. Interaction of cloud data centers with smart grids 178

7.3. State-of-the-art on the energy efficiency techniques of cloud data centers . . . 180
7.3.1. Energy efficiency techniques of non-IT equipment of a data center . . . 180
7.3.2. Energy efficiency techniques in data center servers . . . 181
7.3.3. Energy efficiency techniques for a set of data centers . . . 182
7.3.4. Discussion . . . 184
7.4. State-of-the-art on the decision-aiding techniques in a smart grid-cloud system . . . 185
7.4.1. Game theory . . . 186
7.4.2. Convex optimization . . . 187
7.4.3. Markov decision process . . . 187
7.4.4. Fuzzy logic . . . 187
7.5. Conclusion . . . 188
7.6. References . . . 189

Chapter 8. Toward New Intelligent Architectures for the Internet of Vehicles . . . 193
Léo MENDIBOURE, Mohamed Aymen CHALOUF and Francine KRIEF

8.1. Introduction . . . 193
8.2. Internet of Vehicles . . . 195
8.2.1. Positioning . . . 195
8.2.2. Characteristics . . . 196
8.2.3. Main applications . . . 197
8.3. IoV architectures proposed in the literature . . . 197
8.3.1. Integration of AI techniques in a layer of the control plane . . . 199
8.3.2. Integration of AI techniques in several layers of the control plane . . . 199
8.3.3. Definition of a KP associated with the control plane . . . 200
8.3.4. Comparison of architectures and positioning . . . 200
8.4. Our proposal of intelligent IoV architecture . . . 201
8.4.1. Presentation . . . 202
8.4.2. A KP for data transportation . . . 203
8.4.3. A KP for IoV architecture management . . . 205
8.4.4. A KP for securing IoV architecture . . . 207
8.5. Stakes . . . 209
8.5.1. Security and private life . . . 210
8.5.2. Swarm learning . . . 210

8.5.3. Complexity of computing methods 210
8.5.4. Vehicle flow motion 211
8.6. Conclusion 211
8.7. References 212

Part 5. Intelligent Radio Communications 217

Chapter 9. Artificial Intelligence Application to Cognitive Radio Networks 219
Badr BENMAMMAR and Asma AMRAOUI

9.1. Introduction. 219
9.2. Cognitive radio. 222
9.2.1. Cognition cycle 222
9.2.2. CR tasks and corresponding challenges 223
9.3. Application of AI in CR 223
9.3.1. Metaheuristics 223
9.3.2. Fuzzy logic. 229
9.3.3. Game theory 230
9.3.4. Neural networks. 231
9.3.5. Markov models 231
9.3.6. Support vector machines. 232
9.3.7. Case-based reasoning. 233
9.3.8. Decision trees 233
9.3.9. Bayesian networks 234
9.3.10. MASs and RL 234
9.4. Categorization and use of techniques in CR. 236
9.5. Conclusion 237
9.6. References 237

Chapter 10. Cognitive Radio Contribution to Meeting Vehicular Communication Needs of Autonomous Vehicles 245
Francine KRIEF, Hasnaâ ANISS, Marion BERBINEAU and Killian LE PAGE

10.1. Introduction 245
10.2. Autonomous vehicles 246
10.2.1. Automation levels 246
10.2.2. The main components 247
10.3. Connected vehicle 251
10.3.1. Road safety applications 251
10.3.2. Entertainment applications. 252

10.4. Communication architectures 253
10.4.1. ITS-G5 256
10.4.2. LTE-V2X 257
10.4.3. Hybrid communication 258
10.5. Contribution of CR to vehicular networks 258
10.5.1. Cognitive radio. 259
10.5.2. CR-VANET 260
10.6. SERENA project: self-adaptive selection of radio access technologies using CR 264
10.6.1. Presentation and positioning. 265
10.6.2. General architecture being considered 266
10.6.3. The main stakes 269
10.7. Conclusion 270
10.8. References. 270
