<b>Introduction</b> . . . . .	xi
<b>Chapter 1. The Classification of Galaxies</b> . . . . .	1
Ronald BUTA	
1.1. Introduction. . . . .	1
1.2. Classes of galaxies. . . . .	3
1.3. Elliptical galaxies . . . . .	7
1.4. Spiral galaxies . . . . .	12
1.5. S0 galaxies . . . . .	22
1.6. Magellanic spiral and irregular galaxies . . . . .	25
1.7. Dwarf elliptical, S0, and spheroidal galaxies . . . . .	26
1.8. Edge-on galaxies. . . . .	27
1.9. Morphology of interacting and merging galaxies . . . . .	30
1.10. General properties along the CVRHS sequence. . . . .	31
1.10.1. Morphological systematics. . . . .	31
1.10.2. Astrophysical systematics . . . . .	33
1.11. Other approaches to galaxy classification . . . . .	34
1.12. Interpretations of morphology . . . . .	35
1.13. Artificial galaxies and the future of galaxy classification . . . . .	42
1.14. References. . . . .	44

<b>Chapter 2. Our Galaxy, the Milky Way</b> . . . . .	<b>49</b>
Paola Di MATTEO	
2.1. Introduction . . . . .	49
2.2. Baryonic discs and their spiral structure . . . . .	52
2.2.1. Neutral, ionized and molecular gas . . . . .	52
2.2.2. Thin and thick stellar discs . . . . .	54
2.2.3. Spiral structure from gaseous and stellar tracers . . . . .	59
2.3. The central kiloparsecs: the bar and the bulge . . . . .	60
2.4. The stellar halo . . . . .	63
2.5. On the dark matter content and shape, as inferred from rotation curves and stellar streams . . . . .	67
2.6. Dissecting the global structure: stellar kinematics, abundances and ages . . . . .	69
2.6.1. Setting the scene: the solar vicinity . . . . .	70
2.6.2. Zooming out on a several kpc scale . . . . .	76
2.6.3. Digging into the bulge . . . . .	80
2.7. Reconstructing the Milky Way evolution . . . . .	84
2.8. Perspectives . . . . .	86
2.9. References . . . . .	86
<b>Chapter 3. Early-type Galaxies</b> . . . . .	<b>93</b>
Eric EMSELLEM	
3.1. Introduction . . . . .	93
3.2. General properties: components and morphology . . . . .	95
3.2.1. Discs and bars . . . . .	96
3.2.2. Gas and dust content . . . . .	96
3.2.3. Dark matter and halo . . . . .	97
3.2.4. Globular clusters . . . . .	99
3.2.5. Light and mass profiles . . . . .	99
3.2.6. Extreme cases: brightest cluster galaxies and ultra-diffuse galaxies . . . . .	100
3.3. Zoom on the stellar component . . . . .	101
3.3.1. Scaling relations: Faber–Jackson, fundamental plane and virial plane . . . . .	102
3.3.2. Age and metallicity . . . . .	104
3.3.3. Initial mass function . . . . .	105
3.4. Dynamics of ETGs . . . . .	108
3.4.1. Observations . . . . .	109
3.4.2. Toward a kinematic classification of ETGs . . . . .	110

3.4.3. Modeling . . . . .	113
3.4.4. Supermassive black holes . . . . .	119
3.5. Formation and evolution processes . . . . .	119
3.5.1. Perspective at $z = 0$ : the mass–radius plane. . . . .	119
3.5.2. Growth, mergers and transformations . . . . .	121
3.5.3. <i>Ex situ</i> versus <i>in situ</i> . . . . .	123
3.5.4. Environment . . . . .	124
3.6. Conclusion . . . . .	126
3.7. References . . . . .	127
<b>Chapter 4. Spiral Galaxies . . . . .</b>	<b>137</b>
Françoise COMBES	
4.1. Introduction. . . . .	137
4.2. Blue and red galaxies: quenching star formation. . . . .	142
4.2.1. Definition of bimodality . . . . .	142
4.2.2. The parameters that determine the red sequence. . . . .	146
4.2.3. Mechanisms for quenching star formation . . . . .	148
4.3. Spiral galaxies: density waves or not? . . . . .	152
4.3.1. The winding problem. . . . .	152
4.3.2. The theory of density waves. . . . .	155
4.3.3. Role of gas and star formation . . . . .	159
4.4. Bars: drivers of evolution . . . . .	160
4.4.1. Formation of bars . . . . .	162
4.4.2. Orbits in a barred galaxy. . . . .	164
4.4.3. Response of gas to a barred potential . . . . .	166
4.4.4. Vertical resonances and peanuts . . . . .	168
4.4.5. Dark matter and bars . . . . .	171
4.5. Environment of spiral galaxies . . . . .	173
4.5.1. Morphological segregation . . . . .	173
4.5.2. The problem of bulgeless galaxies . . . . .	174
4.6. Conclusion . . . . .	176
4.7. References . . . . .	177
<b>Chapter 5. Galaxy Mergers and Interactions through Cosmic Time. . . . .</b>	<b>181</b>
Christopher J. CONSELICE	
5.1. Introduction. . . . .	182
5.2. The physics of merging. . . . .	185
5.3. The merger history of galaxies . . . . .	188

5.3.1. Defining mergers and merging . . . . .	188
5.3.2. Merger rates in the nearby universe . . . . .	190
5.3.3. Galaxy merger fraction evolution to $z = 6$ . . . . .	191
5.3.4. Galaxy merger rates . . . . .	196
5.4. The added value of mergers . . . . .	199
5.4.1. Galaxy and black hole assembly through interactions and mergers. . . . .	199
5.4.2. Cosmological relevance . . . . .	201
5.4.3. Future uses and methods. . . . .	202
5.5. Summary . . . . .	203
5.6. Acknowledgments. . . . .	204
5.7. References . . . . .	205
<b>Chapter 6. Cosmic Evolution of Galaxies . . . . .</b>	<b>209</b>
David ELBAZ and Emeric Le FLOC'H	
6.1. Introduction. . . . .	209
6.2. Characteristics of galaxies used to define their cosmic evolution . . . . .	211
6.2.1. Decoding multi-wavelength radiation . . . . .	211
6.2.2. Populations of galaxies. . . . .	216
6.3. Starbursts, secular evolution and universality of star formation. . . . .	218
6.3.1. Definition of a starburst . . . . .	218
6.3.2. The SFMS and the secular evolution of galaxies . . . . .	220
6.3.3. Origin of starbursts . . . . .	221
6.3.4. Secular evolution and the influence of the galactic environment . . . . .	223
6.4. Detection of distant galaxies. . . . .	225
6.4.1. Deep surveys of the Universe. . . . .	227
6.4.2. Large samples of distant galaxies . . . . .	229
6.4.3. K correction . . . . .	232
6.5. Cosmic history of galaxies. . . . .	234
6.5.1. History of star formation. . . . .	234
6.5.2. Evolution of the stellar mass function and formation of the red galaxy sequence . . . . .	237
6.5.3. Evolution of the metallicity and of the average size of galaxies . . . . .	239
6.5.4. Evolution of the galaxy merger and starburst rates . . . . .	241

---

6.6. Origin of the cosmic history of galaxies . . . . .	244
6.6.1. The diffuse cosmic background as a signature of the cosmic history of galaxies . . . . .	245
6.6.2. Unraveling the origin of the cosmic history of galaxies by studying their reservoirs of interstellar matter . . . . .	249
6.7. Conclusion . . . . .	251
6.8. References . . . . .	252
