|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Introduction</b> . . . . .                                                                                                                                                                                                               | xiii |
| Philippe MARTIN and Solène PISSONNIER                                                                                                                                                                                                       |      |
| <b>Chapter 1. Which Land Resources to Adopt for an Ecological Transition of Agri-Food Systems? A Cross-View of Law and Sociology</b> . . . . .                                                                                              | 1    |
| Pierre-Etienne BOUILLOT and Romain MELOT                                                                                                                                                                                                    |      |
| 1.1. Legal framework and contractual practices in farming: towards a greening of land tools? . . . . .                                                                                                                                      | 2    |
| 1.1.1. Forms of authorization over access to land . . . . .                                                                                                                                                                                 | 2    |
| 1.1.2. A renewed framework for contractual land management practices. . . . .                                                                                                                                                               | 7    |
| 1.2. Changes in agricultural landholding structures: a challenge for the transition of agri-food systems and generational renewal. . . . .                                                                                                  | 9    |
| 1.2.1. Access to agricultural land for start-ups and the challenge of generational renewal. . . . .                                                                                                                                         | 9    |
| 1.3. The multifunctionality of agricultural land in food systems . . . . .                                                                                                                                                                  | 13   |
| 1.3.1. Agricultural diversification and land planning: from land preservation to urban food planning? . . . . .                                                                                                                             | 13   |
| 1.3.2. The new challenges of re-territorializing agriculture: the land dimensions of food policies . . . . .                                                                                                                                | 15   |
| 1.4. Conclusion and perspectives . . . . .                                                                                                                                                                                                  | 15   |
| 1.5. References . . . . .                                                                                                                                                                                                                   | 16   |
| <b>Chapter 2. Synergies between Animal Husbandry and Forests for the Development of Agroecological Systems in Middle Mountain and Mediterranean Foothill Regions: Comparative Study of the Limousine Mountain and the Lodevois.</b> . . . . | 23   |
| Nathan MORSEL and Nadège GARAMBOIS                                                                                                                                                                                                          |      |
| 2.1. Introduction . . . . .                                                                                                                                                                                                                 | 23   |

|                                                                                                                                                                  |           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 2.2. The Lodevois and the Limousine Mountain: a disconnection<br>between animal husbandry and forestry . . . . .                                                 | 27        |
| 2.2.1. Once central pastoral practices, with contrasting uses of<br>wooded ecosystems . . . . .                                                                  | 27        |
| 2.2.2. Unprecedented decline in the use of rangelands and the<br>disconnection between agriculture and forestry . . . . .                                        | 29        |
| 2.2.3. The new forests of the Lodevois and the Limousine Mountain:<br>contrasting structure and composition, but both disconnected<br>from agriculture . . . . . | 31        |
| 2.3. Frugal agropastoral systems: putting grazing back at the heart<br>of herd feeding, especially in forest ecosystems . . . . .                                | 33        |
| 2.3.1. Substituting mixed grazing of diverse vegetation as the main feed. . . . .                                                                                | 33        |
| 2.3.2. The key role of wooded ecosystems. . . . .                                                                                                                | 35        |
| 2.3.3. Economical systems focusing on economic labor productivity<br>thanks to agroecological operation . . . . .                                                | 36        |
| 2.3.4. Original systems resulting from the combination of several<br>technical frameworks . . . . .                                                              | 38        |
| 2.4. Obstacles to the use of wooded areas on the Limousine Mountain<br>and the Lodevois: an overview . . . . .                                                   | 39        |
| 2.4.1. Pastoralism and silvicultural management on the Limousine<br>Mountain: rejections by most forestry stakeholder . . . . .                                  | 39        |
| 2.4.2. Tensions in the Lodevois: pastoral agreements with the ONF<br>for fire prevention clash with hunting competition . . . . .                                | 41        |
| 2.4.3. The 2015 PAC reform: new competition for rangelands and a<br>“pro-rata” system disadvantaging wooded rangelands . . . . .                                 | 42        |
| 2.5. Ways to promote the (re)connection between livestock and forests. . . . .                                                                                   | 43        |
| 2.5.1. Synergies between livestock farmers and foresters already in<br>place on the Limousine Mountain . . . . .                                                 | 43        |
| 2.5.2. In the Lodevois, the interplay between livestock farming and<br>forestry is limited by the timber market and property fragmentation . . . . .             | 45        |
| 2.6. Conclusion . . . . .                                                                                                                                        | 46        |
| 2.7. References . . . . .                                                                                                                                        | 47        |
| <b>Chapter 3. Crop–Livestock Interaction at the Territorial Scale:<br/>Tools and Methods to Support Its Development . . . . .</b>                                | <b>51</b> |
| Solène PISSONNIER                                                                                                                                                |           |
| 3.1. Introduction . . . . .                                                                                                                                      | 51        |
| 3.2. Specialization and its ramifications . . . . .                                                                                                              | 52        |
| 3.3. Characteristics of systems integrating crops and livestock. . . . .                                                                                         | 56        |
| 3.3.1. Services provided by crop–livestock integration. . . . .                                                                                                  | 57        |
| 3.4. Spatial and temporal coordinations on a territorial scale . . . . .                                                                                         | 59        |

|                                                                                                                                     |           |
|-------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 3.5. Types of actors involved and forms of partnership . . . . .                                                                    | 61        |
| 3.5.1. Two contrasting examples involving different actor networks . . . . .                                                        | 61        |
| 3.5.2. Actors with additional motivations . . . . .                                                                                 | 62        |
| 3.6. Methods for diagnosing, designing, evaluating and supporting the<br>development of these systems . . . . .                     | 67        |
| 3.6.1. Methodological challenges. . . . .                                                                                           | 67        |
| 3.6.2. Example of a project combining different methodologies. . . . .                                                              | 72        |
| 3.7. Conclusion . . . . .                                                                                                           | 75        |
| 3.8. References . . . . .                                                                                                           | 75        |
| <b>Chapter 4. Genetic Choices, Farming Systems and Territories. . . . .</b>                                                         | <b>81</b> |
| Etienne VERRIER and Anne LAUVIE                                                                                                     |           |
| 4.1. Introduction . . . . .                                                                                                         | 81        |
| 4.2. Organization of animal breeding and the role of farmers, farming<br>systems and links to the territory . . . . .               | 82        |
| 4.3. Collective breeding goals and territories. . . . .                                                                             | 85        |
| 4.4. Breeds, farmers' collectives and other territorial components:<br>diversity of relationships. . . . .                          | 88        |
| 4.5. Individual farmers' decisions and how they relate to breeding<br>collectives' decisions. . . . .                               | 91        |
| 4.6. Conclusion . . . . .                                                                                                           | 93        |
