## Table of Contents

---

<b>Preface</b> . . . . .	ix
<b>Chapter 1. Static Potentials with Sources</b> . . . . .	1
1.1. Poisson equation . . . . .	1
1.2. The image charge method . . . . .	6
1.2.1. General properties . . . . .	6
1.2.2. Point charge in proximity to a conducting plane . . . . .	7
1.2.3. Point charge in proximity to a conducting sphere . . . . .	15
1.2.4. Dipole in proximity to a conducting sphere . . . . .	23
1.2.5. Infinite line charge in proximity to a plane . . . . .	26
1.2.6. Infinite line charge in proximity to a conducting cylinder . . . . .	27
1.3. Green's function . . . . .	34
1.3.1. Position of the problem . . . . .	34
1.3.2. Poisson equation solutions . . . . .	34
1.3.3. Green's theorem . . . . .	36
1.3.4. Inverse Laplacian and Green's function . . . . .	36
1.3.5. Derivation of the Green's function by the Fourier transform . . . . .	39
1.4. Integral form of the Poisson equation . . . . .	40
1.5. Expansion of Green's function on spherical harmonics . . . . .	43
1.6. Green–Dirichlet function from its differential equation . . . . .	49
1.7. Eigenfunctions method . . . . .	55
<b>Chapter 2. Electromagnetic Induction Phenomena</b> . . . . .	59
2.1. Experimental observations . . . . .	59
2.2. EMF for static fields (Lorentz case) . . . . .	66
2.3. Variable magnetic field (Neumann case) . . . . .	71

2.3.1. Motion relative to the fixed reference Oxyz . . . . .	71
2.3.2. Motion relative to the moving frame O'x'y'z' attached to the circuit . . . . .	73
2.3.3. Maxwell–Faraday equation . . . . .	75
2.4. General case of a deformable circuit . . . . .	76
2.4.1. Electromotive field and induced EMF . . . . .	76
2.4.2. Faraday's law . . . . .	76
2.5. Maxwell–Ampère equation and displacement current . . . . .	81
2.6. Lorentz force and canonical momentum . . . . .	85
2.7. Maxwell equations . . . . .	88
2.8. Gauge transformations . . . . .	88
 <b>Chapter 3. Electromagnetic Waves in a Vacuum . . . . .</b>	 95
3.1. Wave equations in a vacuum . . . . .	95
3.2. One-dimensional solutions . . . . .	98
3.3. Structure of a plane electromagnetic wave . . . . .	102
3.4. Progressive plane monochromatic waves (PPMW) . . . . .	104
3.4.1. Sinusoidal solutions of the d'Alembert propagation equation . . . . .	104
3.4.2. Complex representation of PPMWs . . . . .	111
3.4.3. Polarization of a PPMW . . . . .	113
3.5. Interference of light waves . . . . .	124
3.6. Transverse electric (TE) and transverse magnetic (TM) spherical waves . . . . .	132
 <b>Chapter 4. Electromagnetic Energies . . . . .</b>	 137
4.1. Energy stored in a charged distribution . . . . .	137
4.1.1. Electrostatic potential energy of a distribution of point charges . . . . .	138
4.1.2. Electrostatic energy of a continuous charge distribution . . . . .	143
4.1.3. Energy stored in the electric field . . . . .	147
4.1.4. Electrostatic interaction energy between two fields . . . . .	150
4.2. Electrostatic actions on a conductor in equilibrium . . . . .	153
4.2.1. Concepts of rigid body mechanics . . . . .	153
4.2.2. Electrostatic actions from electrostatic energy . . . . .	155
4.3. Magnetic actions . . . . .	159
4.3.1. Laplace force – Moment of Laplace force . . . . .	159
4.3.2. Magnetic moment of a closed circuit in a constant magnetic field . . . . .	160
4.3.3. Expressions of actions from magnetic energy . . . . .	161
4.4. Action of a magnetic field on a conductor: magnetoresistance . . . . .	163
4.5. Magnetic inductances . . . . .	166

---

4.5.1. Neumann formula . . . . .	166
4.5.2. Inductance matrix . . . . .	170
4.5.3. Mutual inductance coupling . . . . .	175
4.6. Electromagnetic energy . . . . .	184
4.6.1. Magnetic energy of a set of n thin-wire circuits . . . . .	184
4.6.2. Magnetic energy of a volume current distribution . . . . .	184
4.6.3. Poynting's theorem . . . . .	190
4.7. Maxwell tensor . . . . .	194
4.7.1. Maxwell stress tensor for the electric field . . . . .	194
4.7.2. Maxwell stress tensor for the magnetic field . . . . .	197
4.7.3. Maxwell stress tensor for the electromagnetic field . . . . .	199
4.7.4. Eigenvalues of the electromagnetic stress tensor . . . . .	200
4.8. Magnetic monopoles and dual transformations . . . . .	201
<b>Chapter 5. Polarization, Polarized Media (Dielectrics) . . . . .</b>	<b>205</b>
5.1. Polarization vector (field), polarization charge . . . . .	205
5.2. Electric field created by a dielectric . . . . .	208
5.3. Boundary conditions for $\vec{E}$ and bound surface charge density . . . . .	210
5.4. Electric displacement field . . . . .	219
5.5. Microscopic approach to linear dielectric media . . . . .	220
5.5.1. Electronic polarization in steady-state . . . . .	221
5.5.2. Electric polarization in a time-varying regime . . . . .	224
5.5.3. Ionic polarization . . . . .	228
5.5.4. Orientation polarization of polar molecules . . . . .	230
5.6. Boundary conditions for the field $\vec{D}$ . . . . .	235
5.7. Polarization current . . . . .	249
5.8. Kramers–Krönig relations . . . . .	250
<b>Chapter 6. Magnetization, Magnetized Media . . . . .</b>	<b>257</b>
6.1. Magnetic field generated by magnetized medium: macroscopic description . . . . .	257
6.1.1. Magnetization vector field . . . . .	257
6.1.2. Magnetization current . . . . .	260
6.1.3. Vector potential and macroscopic magnetic field . . . . .	262
6.1.4. Magnetic excitation vector $\vec{H}$ . . . . .	264
6.1.5. Boundary conditions for the fields $\vec{B}$ and $\vec{H}$ . . . . .	265
6.2. Microscopic description of magnetization . . . . .	275
6.2.1. Problem statement . . . . .	275
6.2.2. Diamagnetism . . . . .	276
6.2.3. Paramagnetism . . . . .	282

6.2.4. Ferromagnetism . . . . .	288
6.3. Constitutive relations . . . . .	291
6.3.1. Linear magnetic medium . . . . .	291
6.3.2. Calculation of induced magnetization . . . . .	292
6.3.3. Calculation of $\vec{H}$ and $\vec{B}$ in a magnetized medium (given $\vec{M}$ ) . . . . .	301
6.4. Method of images . . . . .	306
6.4.1. Image of a magnetic moment in an infinitely permeable medium . . . . .	306
6.4.2. Image of a current line . . . . .	308
6.5. Magnetic field and force . . . . .	311
 <b>Chapter 7. Electromagnetic Fields in Matter . . . . .</b>	<b>321</b>
7.1. Maxwell equations . . . . .	321
7.2. Energy conservation . . . . .	329
7.2.1. Electrostatic energy stored in a charge distribution . . . . .	329
7.2.2. Poynting vector . . . . .	330
7.2.3. Electromagnetic momentum and Maxwell stress tensor . . . . .	334
7.2.4. Complex Poynting theorem . . . . .	336
7.3. Electromagnetic potentials . . . . .	338
7.4. Plane wave in material medium . . . . .	339
7.4.1. Plane wave in a linear and isotropic dielectric . . . . .	341
7.4.2. Electromagnetic wave in a conductive medium . . . . .	350
7.4.3. Propagation of an electromagnetic wave in a plasma . . . . .	355
7.4.4. Propagation in a dielectric medium . . . . .	360
7.5. Dispersive media . . . . .	366
7.5.1. Propagation in a dispersive and absorbent medium . . . . .	369
7.5.2. Propagation in a transparent and inhomogeneous medium . . . . .	371
7.6. Normal incidence on a perfect conductor . . . . .	376
7.7. Normal incidence on a dielectric . . . . .	378
7.7.1. Lossless (perfect) dielectric . . . . .	378
7.7.2. Dielectric with losses (with ohmic conductivity) . . . . .	380
7.7.3. Complete signal transmission through a coating . . . . .	381
7.8. Oblique incidence of a plane wave . . . . .	383
7.8.1. Oblique incidence on a perfect conductor . . . . .	388
7.8.2. Oblique incidence on a perfect dielectric . . . . .	390
 <b>References . . . . .</b>	<b>401</b>
 <b>Index . . . . .</b>	<b>407</b>
