Preface	ix
Introduction	xi
Chapter 1. Topological Vector Spaces	1
1.1. Semi-norms	1
1.2. Topological vector space: definition and properties	2
1.2.1. Topology and semi-norms	3
1.2.2. Topological vector space	4
1.2.3. Locally convex topological vector space	5
1.2.4. Topological metrizable vector space	6
1.2.5. Convergence in a topological vector space	7
1.2.6. Applications and linear forms	8
1.3. Inductive limit topology	9
Chapter 2. Spaces of Test Functions	13
2.1. Multi-index notations	13
2.1.1. Leibniz formula	14
2.2. \mathcal{C}^∞ function with compact support	14
2.2.1. Support of a continuous function	14
2.2.2. Spaces of test functions	15
2.2.3. Convergence in $\mathcal{D}(\Omega)$	20
2.2.4. Convolution product	21
2.2.5. A few density results	25
2.3. Exercises with solutions	26

Chapter 3. Distributions on an Open Set of \mathbb{R}^d	37
3.1. Definitions	37
3.1.1. Functional definition	37
3.1.2. Definition of order	38
3.1.3. Order of a distribution	39
3.2. Examples of distributions	39
3.2.1. Regular distributions	39
3.2.2. Non-regular distributions	41
3.2.3. Other examples	46
3.2.4. Radon measure	46
3.3. Convergence of sequences of distributions	48
3.3.1. Definition and examples	48
3.3.2. Other convergence results	52
3.4. Exercises with solutions	55
Chapter 4. Operations on Distributions	75
4.1. Multiplication by a C^∞ function	75
4.1.1. Definition and some properties	76
4.1.2. Examples	77
4.1.3. Convergence properties	77
4.1.4. Solution of the equations $xT = 0$, $xT = 1$ and $xT = S$	78
4.2. Differentiation of a distribution	81
4.2.1. Definition and examples	82
4.2.2. Continuity of the differentiation operator	87
4.2.3. Solution of the equations $T' = 0$ and $\partial_{x_i} T = 0$	87
4.2.4. Jump formula in dimension 1	91
4.2.5. Differentiation/integration under the duality bracket	98
4.3. Transformations of distributions	100
4.3.1. Distribution translation	100
4.3.2. Distribution dilation	102
4.3.3. Distribution parity	102
4.3.4. Distribution homogeneity	103
4.4. Exercises with solutions	103
Chapter 5. Distribution Support	123
5.1. Distribution restriction and extension	123
5.1.1. Unit partitions	123
5.1.2. Distribution localization and recollement	125
5.2. Distribution support	126
5.2.1. Definition	126
5.2.2. Examples	127

5.2.3. Properties of the support	128
5.3. Compact support distributions	132
5.3.1. Definition and properties	133
5.3.2. Distributions with point support	137
5.4. Exercises with solutions	137
Chapter 6. Convolution of Distributions	151
6.1. Definition and examples	151
6.1.1. Convolution of two regular distributions	151
6.1.2. Convolution of a distribution and a function in $\mathcal{D}(\mathbb{R}^d)$	153
6.1.3. Density of $\mathcal{D}(\Omega)$ in $\mathcal{D}'(\Omega)$	155
6.1.4. Convolution of two distributions	157
6.1.5. Some examples	158
6.2. Properties of convolution	161
6.2.1. Support of a convolution	161
6.2.2. Sequential continuity of the convolution product	162
6.2.3. Associativity and convolution	163
6.2.4. Differentiation and convolution	165
6.2.5. Translation and convolution	166
6.2.6. Algebraic study of $\mathcal{D}'_+(\mathbb{R})$	166
6.3. Exercises with solutions	167
Chapter 7. Schwartz Spaces and Tempered Distributions	179
7.1. $\mathcal{S}(\mathbb{R}^d)$ Schwartz spaces	179
7.1.1. Definitions and examples	179
7.1.2. Topology and convergence in $\mathcal{S}(\mathbb{R}^d)$	183
7.1.3. First properties of $\mathcal{S}(\mathbb{R}^d)$	184
7.1.4. Operators in $\mathcal{S}(\mathbb{R}^d)$	187
7.2. Tempered distributions	189
7.2.1. Definition and examples	190
7.2.2. Convergence in $\mathcal{S}'(\mathbb{R}^d)$	193
7.2.3. First properties of $\mathcal{S}'(\mathbb{R}^d)$	194
7.2.4. Operators in $\mathcal{S}'(\mathbb{R}^d)$	195
7.3. Exercises with solutions	196
Chapter 8. Fourier Transform	205
8.1. Fourier transform in $L^1(\mathbb{R}^d)$	205
8.1.1. Definition and first properties	206
8.1.2. Fourier transform and operations	212
8.1.3. Fourier transform inversion	219
8.2. Fourier transform in $\mathcal{S}(\mathbb{R}^d)$	220

8.2.1. Definition and first properties	220
8.2.2. Fourier transform and operations	222
8.2.3. Fourier transform inversion	224
8.2.4. Fourier transform and convolution	228
8.3. Fourier transform in $\mathcal{S}'(\mathbb{R}^d)$	230
8.3.1. Definition and first properties	230
8.3.2. Fourier transform and differentiation	232
8.3.3. Fourier transform inversion	233
8.3.4. Fourier transform in $\mathcal{E}'(\mathbb{R}^d)$	234
8.3.5. Fourier transform and Poisson summation formula	236
8.3.6. Fourier transform and convolution	239
8.4. Exercises with solutions	240
Chapter 9. Applications to ODEs and PDEs	263
9.1. Partial Fourier transform	263
9.2. Tempered solutions of differential equations	264
9.3. Fundamental solutions of certain PDEs	265
9.3.1. Heat equation	265
9.3.2. Wave equation	266
Appendix	269
References	275
Index	277
