<b>Preface</b> . . . . .	ix
<b>Acknowledgments</b> . . . . .	xiii
<b>Introduction</b> . . . . .	xv
<b>Part 1. Higher-dimensional Random Motions and Interactive Particles</b> . . . . .	1
<b>Chapter 1. Random Motions in Higher Dimensions</b> . . . . .	3
1.1. Random motion at finite speed with semi-Markov switching directions process . . . . .	5
1.1.1. Erlang-K-distributed direction alternations . . . . .	7
1.1.2. Some properties of the random walk in a semi-Markov environment and its characteristic function . . . . .	15
1.2. Random motion with uniformly distributed directions and random velocity . . . . .	17
1.2.1. Renewal equation for the characteristic function of isotropic motion with random velocity in a semi-Markov media . . . . .	17
1.2.2. One-dimensional case . . . . .	20
1.2.3. Two-dimensional case . . . . .	23
1.2.4. Three-dimensional case . . . . .	23
1.2.5. Four-dimensional case . . . . .	31
1.3. The distribution of random motion at non-constant velocity in semi-Markov media . . . . .	32
1.3.1. Renewal equation for the characteristic function . . . . .	34
1.3.2. Two-dimensional case . . . . .	35
1.3.3. Three-dimensional case . . . . .	37

1.3.4. Four-dimensional case . . . . .	40
1.4. Goldstein–Kac telegraph equations and random flights in higher dimensions . . . . .	43
1.4.1. Preliminaries about our modeling approach . . . . .	45
1.4.2. Two-dimensional case . . . . .	48
1.4.3. Three-dimensional case . . . . .	51
1.4.4. Five-dimensional case . . . . .	59
1.5. The jump telegraph process in $\mathbb{R}^n$ . . . . .	62
1.5.1. The jump telegraph process in $\mathbb{R}^3$ . . . . .	63
1.5.2. Conclusions and final remarks . . . . .	64
<b>Chapter 2. System of Interactive Particles with Markov and Semi-Markov Switching . . . . .</b>	<b>67</b>
2.1. Description of the Markov model . . . . .	68
2.1.1. Distribution of the first meeting time of two telegraph processes . . . . .	69
2.1.2. Estimate of the number of particle collisions . . . . .	74
2.1.3. Free path times of a family of particles . . . . .	76
2.1.4. Estimation of the number of particle collisions for systems with boundaries . . . . .	78
2.1.5. Estimation of the number of particle collisions for systems without boundaries . . . . .	83
2.2. Interaction of particles governed by generalized integrated telegraph processes: a semi-Markov case . . . . .	87
2.2.1. Laplace transform of the distribution of the first collision of two particles . . . . .	88
2.2.2. Semi-Markov case . . . . .	91
2.2.3. Distribution of the first collision of two particles with finite expectation . . . . .	95
<b>Part 2. Financial Applications . . . . .</b>	<b>99</b>
<b>Chapter 3. Asymptotic Estimation for Application of the Telegraph Process as an Alternative to the Diffusion Process in the Black–Scholes Formula . . . . .</b>	<b>101</b>
3.1. Asymptotic expansion for the singularly perturbed random evolution in Markov media in the case of disbalance . . . . .	101
3.2. Application: Black–Scholes formula . . . . .	106
<b>Chapter 4. Variance, Volatility, Covariance and Correlation Swaps for Financial Markets with Markov-modulated Volatilities . . . . .</b>	<b>111</b>
4.1. Volatility derivatives . . . . .	111
4.1.1. Types of volatilities . . . . .	111
4.1.2. Models for volatilities . . . . .	113

4.1.3. Variance and volatility swaps . . . . .	115
4.1.4. Covariance and correlation swaps . . . . .	116
4.1.5. A brief literature review . . . . .	117
4.2. Martingale representation of a Markov process . . . . .	118
4.3. Variance and volatility swaps for financial markets with Markov-modulated stochastic volatilities . . . . .	122
4.3.1. Pricing variance swaps . . . . .	124
4.3.2. Pricing volatility swaps . . . . .	124
4.4. Covariance and correlation swaps for two risky assets for financial markets with Markov-modulated stochastic volatilities . . . . .	128
4.4.1. Pricing covariance swaps . . . . .	128
4.4.2. Pricing correlation swaps . . . . .	130
4.4.3. Correlation swap made simple . . . . .	130
4.5. Example: variance, volatility, covariance and correlation swaps for stochastic volatility driven by two state continuous Markov chain . . . . .	132
4.6. Numerical example . . . . .	134
4.6.1. S&P 500: variance and volatility swaps . . . . .	134
4.6.2. S&P 500 and NASDAQ-100: covariance and correlation swaps . . . . .	135
4.7. Appendix 1 . . . . .	138
4.7.1. Correlation swaps: first-order correction . . . . .	138

<b>Chapter 5. Modeling and Pricing of Variance, Volatility, Covariance and Correlation Swaps for Financial Markets with Semi-Markov Volatilities . . . . .</b>	<b>143</b>
5.1. Introduction . . . . .	143
5.2. Martingale representation of semi-Markov processes . . . . .	148
5.3. Variance and volatility swaps for financial markets with semi-Markov stochastic volatilities . . . . .	151
5.3.1. Pricing of variance swaps . . . . .	153
5.3.2. Pricing of volatility swaps . . . . .	155
5.3.3. Numerical evaluation of variance and volatility swaps with semi-Markov volatility . . . . .	158
5.4. Covariance and correlation swaps for two risky assets in financial markets with semi-Markov stochastic volatilities . . . . .	159
5.4.1. Pricing of covariance swaps . . . . .	160
5.4.2. Pricing of correlation swaps . . . . .	162
5.5. Numerical evaluation of covariance and correlation swaps with semi-Markov stochastic volatility . . . . .	164

5.6. Appendices . . . . .	165
5.6.1. Appendix 1. Realized correlation: first-order correction . . . . .	165
5.6.2. Appendix 2. Discussions of some extensions . . . . .	169
<b>References</b> . . . . .	177
<b>Index</b> . . . . .	191
<b>Summary of Volume 1</b> . . . . .	193
