Chapter 1. The Rare Earth Resources of Europe and Greenland: Mining Potential and Challenges	1
Nicolas CHARLES, Johann TUDURI, Gaétan LEFEBVRE, Olivier POURRET, Fabrice GAILLARD and Kathryn GOODENOUGH	
1.1. Introduction.	1
1.2. The extreme diversity of rare earths	3
1.2.1. Rare earth elements.	3
1.2.2. Rare earth minerals	6
1.3. The economy of rare earths in the world and their place in Europe	9
1.3.1. The application domains for rare earths.	9
1.3.2. The evolution of prices.	11
1.3.3. Europe in the rare earth economy	14
1.4. Classification of rare earth deposits	16
1.4.1. Primary endogenous deposits	17
1.4.2. Secondary exogenous deposits	19
1.5. Rare earths deposits in Europe	20
1.5.1. Rare earth indices in the Baltic shield	22
1.5.2. The rare earths indices of the Caledonides	52
1.5.3. Rare earth occurrences in the Variscan belt.	56
1.5.4. Rare earths indices from the Mesozoic	64
1.5.5. Rare earth occurrences from the Cenozoic and Quaternary	68
1.6. The rare earths deposits of Greenland	78
1.6.1. The alkaline provinces of the Archean (2,750–2,700 Ma)	79
1.6.2. Paleoproterozoic deposits at Karrat (NIAQ and UMIA)	80

1.6.3. Pegmatites from the late Paleoproterozoic (1,800–1,785 Ma)	82
1.6.4. Gardar Mesoproterozoic alkaline province	82
1.6.5. Carbonatites from the Neoproterozoic to the Mesozoic (southwestern Greenland)	88
1.6.6. Milne Land Jurassic–Cretaceous REE-Ti-Zr paleoplacer	91
1.6.7. Alkaline complexes from the Paleogene (central and eastern Greenland)	92
1.7. The origin of the rare earth deposits in Europe and Greenland.	94
1.7.1. Partial melting and crystal fractionation.	94
1.7.2. Chlorinity of hydrothermal systems	96
1.7.3. Exogenous rare earth cycle	97
1.8. Strengths and weaknesses of rare earths deposits in Europe and Greenland	100
1.9. Conclusion	106
1.10. Acknowledgments	106
1.11. References.	107

Chapter 2. The Cornubian Batholith: Post-Collisional Variscan Granites and Resources. 143
Robin SHAIL and Beth SIMONS

2.1. Introduction.	143
2.2. Tectonic context of magmatism and resources	146
2.2.1. Variscan tectonics.	146
2.2.2. Post-Variscan tectonics	147
2.3. Lamprophyres and basalts	148
2.4. The Cornubian Batholith and associated felsic igneous rocks	150
2.4.1. Geophysical data	150
2.4.2. Field occurrence.	151
2.4.3. Mineralogical and textural variation	160
2.4.4. Mineral chemistry.	165
2.4.5. Whole-rock geochemistry	166
2.4.6. Geochronology	167
2.4.7. Synthesis	168
2.5. Granite-related mineralization.	173
2.5.1. Disseminated magmatic mineralization	175
2.5.2. Pegmatites	176
2.5.3. Replacement deposits	176
2.5.4. Mineralization associated with greisen and potassic alteration	179

2.5.5. Tourmaline-dominated veins, lodes and intrusive breccias	181
2.5.6. Polymetallic sulfide lodes	184
2.5.7. Mineralization models	185
2.6. Post-granite mineralization.	191
2.6.1. Cross-course mineralization.	191
2.6.2. Five-element (Co-Ni-Bi-As-Ag) and uranium mineralization . . .	193
2.6.3. Hydrocarbons	193
2.7. China clay.	193
2.8. The past, present and future of the resources sector in SW England	195
2.8.1. W, Sn, Cu	195
2.8.2. Lithium micas (St Austell granite)	199
2.8.3. Deep geothermal energy	200
2.8.4. Lithium brines	201
2.8.5. Industrial minerals, aggregates and building stones	202
2.9. Environmental, cultural and social impact of mining	203
2.10. References.	204

**Chapter 3. The W Deposit at Panasqueira (Portugal):
A Critical Bibliographical Review** 221
Christian MARIGNAC and Michel CATHELINÉAU

3.1. Introduction.	221
3.2. Geological context.	223
3.2.1. Regional context	223
3.2.2. Local geological setting	225
3.2.3. Mineralized vein system	227
3.2.4. The RMG granitic suite at Panasqueira	234
3.3. Relative chronology of the alteration and mineralization stages.	237
3.3.1. Historical overview and methodological considerations	237
3.3.2. The paragenetic succession at Panasqueira	240
3.3.3. Wallrock alterations	266
3.3.4. Consequences and implications of revising the paragenesis	267
3.3.5. Absolute chronology	269
3.4. The opening of the veins	271
3.4.1. The opening conditions	271
3.4.2. The origin of the flat joints	272
3.4.3. The place of flat joints in the regional history	276

3.5. P and T conditions at the early and late stages	278
3.5.1. The early stages (stages I–III).	278
3.5.2. Late stages (stages IV–V).	282
3.6. Characterization of the origin of fluids.	284
3.6.1. Geochemical arguments: the early stages (I to III-A).	285
3.6.2. Geochemical arguments: the late stages (III-B, IV, V).	287
3.6.3. Mass balances and the source of the fluids	294
3.6.4. Presence of a magmatic component	295
3.7. Role of the Panasqueira granites	295
3.8. Panasqueira: a magmatic and hydrothermal system of crustal scale.	298
3.9. References	302
Appendix 1. The Rare Earth Resources of Europe and Greenland: Mining Potential and Challenges	313
Nicolas CHARLES, Johann TUDURI, Gaétan LEFEBVRE, Olivier POURRET, Fabrice GAILLARD and Kathryn GOODENOUGH	
Appendix 2. The Cornubian Batholith: Post-Collisional Variscan Granites and Resources.	325
Robin SHAIL and Beth SIMONS	
Appendix 3. The Panasqueira W Deposit (Portugal): A Critical Bibliographic Review	329
Christian MARIGNAC and Michel CATHELINÉAU	
List of Authors	353
Index	355
Summary of Volume 2	363
