<b>Preface</b> . . . . .	xi
<b>Chapter 1. Stability Analysis of Queueing Systems based on Synchronization of the Input and Majorizing Output Flows</b> . . . . .	1
Larisa AFANASEVA	
1.1. Introduction . . . . .	1
1.2. Model description . . . . .	4
1.3. Auxiliary service process . . . . .	6
1.4. Instability result for the case $\rho \geq 1$ . . . . .	9
1.5. Stochastic boundedness for the case $\rho < 1$ . . . . .	10
1.6. Queueing system with unreliable servers and preemptive resume service discipline . . . . .	11
1.7. Discrete-time queueing system with interruptions and preemptive repeat different service discipline . . . . .	15
1.8. Queueing system with a preemptive priority discipline . . . . .	18
1.9. Queueing system with simultaneous service of a customer by a random number of servers . . . . .	20
1.10. Applications to transport systems analysis . . . . .	23
1.11. Conclusion . . . . .	28
1.12. Acknowledgment . . . . .	29
1.13. References . . . . .	29

<b>Chapter 2. Queueing Models in Services – Analytical and Simulation Approach</b> . . . . .	33
Srinivas R. CHAKRAVARTHY	
2.1. Introduction . . . . .	33
2.2. Phase-type distributions and the batch Markovian arrival process . . . . .	34
2.2.1. Phase-type distributions . . . . .	35
2.2.2. Some useful results related to continuous $PH$ distributions . . . . .	36
2.2.3. The batch Markovian arrival process . . . . .	40
2.3. Generation of $MAP$ processes for numerical purposes . . . . .	42
2.4. Analysis of selected queueing models of $BMAP/G/c$ type . . . . .	44
2.4.1. $MAP/PH/1$ queueing model . . . . .	44
2.4.2. The system performance measures . . . . .	48
2.4.3. Illustrative numerical examples for $MAP/PH/1$ . . . . .	49
2.4.4. $MAP/M/c$ queueing model . . . . .	55
2.4.5. The system performance measures . . . . .	57
2.4.6. Illustrative numerical examples for $MAP/M/c$ . . . . .	57
2.5. Simulated models of $BMAP/G/c$ type queues . . . . .	58
2.5.1. Simulated model validation using $MAP/M/c$ type queues . . . . .	59
2.5.2. Simulated model validation using $MAP/PH/1$ type queues . . . . .	59
2.5.3. Selected simulated models of $BMAP/G/c$ type queues . . . . .	59
2.6. Analysis of selected queueing models of $BMAP/G/c$ type with a vacation . . . . .	66
2.6.1. $MAP/PH/1$ queueing model with a vacation . . . . .	66
2.6.2. The system performance measures . . . . .	69
2.6.3. Illustrative numerical examples for $MAP/PH/1$ with a vacation . . . . .	69
2.6.4. Validation of the simulated model for vacation type queues . . . . .	74
2.6.5. Selected simulated models of $BMAP/G/c$ type queues with a vacation . . . . .	75
2.7. Acknowledgment . . . . .	78
2.8. References . . . . .	78
<b>Chapter 3. Distributions and Random Processes Related to Queueing and Reliability Models</b> . . . . .	81
Boyan DIMITROV	
3.1. Some useful notations, relationships and interpretations . . . . .	81
3.2. Unreliable service model and reliability maintenance . . . . .	85
3.3. Characterizations of exponential and geometric distributions via properties of service times . . . . .	88
3.3.1. Instant repairs: characterization of geometric distribution . . . . .	89

3.3.2. Instant repairs: characterizations of the exponential distribution . . . . .	94
3.3.3. Various simplifying conditions . . . . .	101
3.3.4. Unreliable service, repair times included . . . . .	111
3.4. Probability distributions almost having lack of memory property . . . . .	115
3.4.1. Service time on an unreliable server: instantaneous repairs . . . . .	116
3.4.2. Properties of ALM distributions, and equivalent presentations . . . . .	119
3.4.3. Periodicity in natural phenomena . . . . .	126
3.5. Random processes with a periodic nature . . . . .	126
3.5.1. Counting processes . . . . .	127
3.5.2. Characterization of an NPP . . . . .	128
3.5.3. Applications in risk modeling . . . . .	131
3.6. Conclusions . . . . .	132
3.7. References . . . . .	133

**Chapter 4. The Impact of Information Structure on Strategic Behavior in Queueing Systems . . . . . 137**

Antonis ECONOMOU

4.1. Introduction . . . . .	138
4.2. Game-theoretical framework in queueing . . . . .	139
4.3. The unobservable model . . . . .	142
4.4. The observable model . . . . .	146
4.5. Comparison of the unobservable and the observable models . . . . .	151
4.6. Partially observable models . . . . .	153
4.7. Heterogeneously observable models . . . . .	158
4.8. Observable-with-delay models . . . . .	162
4.9. Conclusions and literature review for further study . . . . .	167
4.10. Acknowledgments . . . . .	167
4.11. References . . . . .	168

**Chapter 5. Non-extensive Maximum Entropy Formalisms and Inductive Inference of a Stable M/G/1 Queue with Heavy Tails . . . . . 171**

Demetres D. KOUVATSOS and Ismail A. MAGEED

5.1. Introduction . . . . .	172
5.2. General systems and inductive ME formalisms . . . . .	175
5.2.1. “Classical” Shannon’s EME formalism with short-range interactions . . . . .	175
5.2.2. Rényi’s and Tsallis’s NME formalisms with long-range interactions . . . . .	176
5.3. NME formalisms and EME consistency axioms . . . . .	177
5.4. A stable M/G/1 queue with long-range interactions . . . . .	179
5.4.1. Background: Shannon’s EME state probability of a stable M/G/1 queue . . . . .	179

5.4.2. Tsallis' and Rényi's NME state probabilities of a stable M/G/1 queue . . . . .	180
5.4.3. Exact Rényi's and Tsallis' NME state probabilities with distinct GEq-type service time distributions . . . . .	183
5.5. Numerical experiments and interpretations . . . . .	188
5.6. Conclusions . . . . .	195
5.7. Acknowledgments . . . . .	196
5.8. Appendix: Rényi's NME formalisms versus EME consistency axioms . . . . .	196
5.8.1. Uniqueness . . . . .	196
5.8.2. Invariance . . . . .	197
5.8.3. System independence . . . . .	197
5.8.4. Subset independence . . . . .	198
5.9. References . . . . .	199
<b>Chapter 6. Inventory with Positive Service Time: a Survey . . . . .</b>	<b>201</b>
Achyutha KRISHNAMOORTHY, Dhanya SHAJIN and Viswanath C. NARAYANAN	
6.1. Introduction . . . . .	201
6.2. Queueing inventory models . . . . .	203
6.2.1. Single-commodity queueing-inventory systems . . . . .	206
6.2.2. Production inventory systems . . . . .	215
6.2.3. Multicommodity queueing-inventory system . . . . .	217
6.2.4. Retrial queues with inventory . . . . .	219
6.2.5. Queues requiring additional items for service . . . . .	222
6.2.6. Queueing-inventory: some work in progress and suggestions for future studies . . . . .	225
6.3. Acknowledgment . . . . .	227
6.4. References . . . . .	227
<b>Chapter 7. A Stability Analysis Method of Regenerative Queueing Systems . . . . .</b>	<b>239</b>
Evsey MOROZOV and Bart STEYAERT	
7.1. Introduction . . . . .	239
7.2. Preliminaries . . . . .	241
7.3. The single-server system . . . . .	244
7.4. The zero-delayed multiserver system . . . . .	248
7.5. The delayed multiserver system: finiteness of the first regeneration period . . . . .	252
7.6. Instability . . . . .	256
7.6.1. Some comments on the method . . . . .	260
7.7. Related research . . . . .	262
7.8. Acknowledgments . . . . .	266
7.9. References . . . . .	266

---

**Chapter 8. Transient Analysis of Markovian Queueing Systems:  
a Survey with Focus on Closed-forms and Uniformization . . . . . 269**  
Gerardo RUBINO

- 8.1. Introduction . . . . . 270
- 8.2. Basics on Markovian queues . . . . . 272
  - 8.2.1. Markov models . . . . . 272
  - 8.2.2. Uniformization . . . . . 273
- 8.3. First examples . . . . . 275
  - 8.3.1. The Ehrenfest model in continuous-time . . . . . 275
  - 8.3.2. The  $M/M/\infty$  model . . . . . 276
  - 8.3.3. A queue with no server and catastrophes . . . . . 277
  - 8.3.4. The fundamental  $M/M/1$  model . . . . . 278
  - 8.3.5.  $M/M/1$  with bounded waiting room: the  $M/M/1/H$  model . . . . . 282
  - 8.3.6. Comments . . . . . 284
- 8.4. An uniformization-based path for the  $M/M/1$  with matrix generating functions . . . . . 284
  - 8.4.1. General case . . . . . 286
  - 8.4.2. Mean number of customers at time  $t$  in the  $M/M/1$  . . . . . 287
- 8.5. An uniformization-based path using duality . . . . . 290
  - 8.5.1. Duality . . . . . 290
  - 8.5.2. The path toward the transient state distributions using duality . . . . . 293
  - 8.5.3. Application to the  $M/M/1$  queueing system . . . . . 294
  - 8.5.4. Application to the  $M/M/1/H$  queueing system . . . . . 295
  - 8.5.5. Application to an  $M/M/1/H$  model with catastrophes . . . . . 297
- 8.6. Other transient results . . . . . 299
  - 8.6.1. Busy period of the  $M/M/1$  . . . . . 299
  - 8.6.2. Max backlog of the  $M/M/1$  over a finite time interval . . . . . 299
  - 8.6.3.  $M/E/1$  . . . . . 300
- 8.7. Conclusions . . . . . 302
- 8.8. References . . . . . 302

**List of Authors . . . . . 307**

**Index . . . . . 309**
